Copyright Office,1946](#) [Mass Spectrometry in the Biological Sciences: A Tutorial](#) M.L Gross,2012-12-06 The developments in mass spectrometry over the past fifteen years have been impressive in their implications in bioanalytical chemistry The achievements begin with the inventions of Cf 252 Plasma Desorption Mass Spectrometry by Macfarlane and Fourier Transform Mass Spectrometry by Comisarow and Marshall in the mid 1970s The former showed the feasibility of producing large gas phase ions from large biomolecules whereas the latter enhanced the capabilities for ion trapping especially in analytical mass spectrometry A major achievement was the development by Barber of Fast Atom Bombardment FAB mass spectrometry an advance that heralded a new era in biological mass spectrometry Contemporary and routine instruments such as magnetic sectors and quadrupoles were rapidly adapted to FAB and nearly the entire universe of small molecules became amenable to study by mass spectrometry The introduction of FAB also paved the way for improvement of instrument capability For example the upper mass limit of magnet sector mass spectrometers was increased by nearly an order of magnitude by the instrument manufacturers Furthermore the technique of tandem mass spectrometry MS MS was given new meaning because important structural information for biomolecules could now be produced for ions introduced by FAB into the tandem instrument The evolution of MS MS continues today with the development of ion traps time of flight and sector instruments equipped with array detection **Ubiquitous Intelligence and Computing** Jadwiga Indulska,Laurence T. Deep Oil Spills Steven A. Murawski, Cameron H. Ainsworth, Sherryl Gilbert, David J. Hollander, Claire B. Paris, Michael Schlüter, Dana L. Wetzel, 2019-06-29 The demand for oil and gas has

brought exploration and production to unprecedented depths of the world's oceans. Currently over 50% of the oil from the Gulf of Mexico now comes from waters in excess of 1 500 meters one mile deep where no oil was produced just 20 years ago. The Deepwater Horizon oil spill blowout did much to change the perception of oil spills as coming just from tanker accidents, train derailments and pipeline ruptures. In fact beginning with the Ixtoc 1 spill off Campeche, Mexico in 1979-1980 there have been a series of large spill events originating at the sea bottom and creating a myriad of new environmental and well control challenges. This volume explores the physics, chemistry, sub-surface oil deposition and environmental impacts of deep oil spills. Key lessons learned from the responses to previous deep spills as well as unresolved scientific questions for additional research are highlighted, all of which are appropriate for governmental regulators, politicians, industry decision makers, first responders, researchers and students wanting an incisive overview of issues surrounding deep water oil and gas production.

Behery, 2005-10-31 It is a consumer's instinct to use the sense of touch when choosing a garment to describe and assess the fabric quality and its suitability for a specific end use. The way that the fabric feels is described as its handle or fabric hand. Fabric hand can be evaluated by mechanical or electronic devices and by human judges using psychophysical or psychological techniques. **Effect of mechanical and physical properties on fabric hand** thoroughly explores the techniques and issues involved in this difficult subject. It begins by looking at the concepts of fabric hand with chapters on the developments in hand measurement, the application of statistical methods and the differences in fabric hand between different cultures. The second part is devoted to the different effects fiber, yarn and fabric can have on fabric hand. The effect of factors including fiber, yarn and woven fabrics are all outlined in separate chapters. Finally, the third section describes the effect that processing has on fabric hand. This includes processes such as wet processing and chemical finishing, mechanical finishing and refurbishing. Finally, two important appendices are included for reference. Appendix A is from the Hand Evaluation and Standardization Committee and outlines the Kawabata system for standardization and analysis of hand evaluation. Appendix B describes the SiroFAST system of fabric assurance by simple testing developed by CSIRO Australia. With an international panel of distinguished contributors, **Effect of mechanical and physical properties on fabric hand** provides comprehensive coverage on the subject. It will be an essential work for those researching and working in apparel and fashion design, textile selection, fabric designers and developers, manufacturers and those interested in fabric dyeing and finishing. Essential reading for all those working in apparel and fashion design, textile selection, fabric design and
