Canon ,2021 **The Psychology of Magic and the Magic of Psychology** Amir Raz,Jay A. Olson,Gustav Kuhn,2016-11-18 Magicians have dazzled audiences for many centuries however few researchers have studied how let alone why most tricks work The psychology of magic is a nascent field of research that examines the underlying mechanisms that conjurers use to achieve enchanting phenomena including sensory illusions misdirection of attention and the appearance of mind control and nuanced persuasion Most studies to date have focused on either the psychological principles involved in watching and performing magic or neuromagic the neural correlates of such phenomena Whereas performers sometimes question the contributions that modern science may offer to the advancement of the magical arts the history of magic reveals that scientific discovery often charts new territories for magicians In this research topic we sketch out the symbiotic relationship between psychological science and the art of magic On the one hand magic can inform psychology with particular benefits for the cognitive social developmental and transcultural components of behavioural science Magicians have a large and robust set of effects that most researchers rarely exploit Incorporating these effects into existing experimental even clinical paradigms paves the road to innovative trajectories in the study of human behaviour For example magic provides an elegant way to study the behaviour of participants who may believe they had made choices that they actually did not make Moreover magic fosters a more ecological approach to experimentation whereby scientists can probe

participants in more natural environments compared to the traditional lab based settings Examining how magicians consistently influence spectators for example can elucidate important aspects in the study of persuasion trust decision making and even processes spanning authorship and agency Magic thus offers a largely underused armamentarium for the behavioural scientist and clinician On the other hand psychological science can advance the art of magic The psychology of deception a relatively understudied field explores the intentional creation of false beliefs and how people often go wrong Understanding how to methodically exploit the tenuous twilight zone of human vulnerabilities perceptual logical emotional and temporal becomes all the more revealing when top down influences including expectation symbolic thinking and framing join the fray Over the years science has permitted magicians to concoct increasingly effective routines and to elicit heightened feelings of wonder from audiences Furthermore on occasion science leads to the creation of novel effects or the refinement of existing ones based on systematic methods For example by simulating a specific card routine using a series of computer stimuli researchers have decomposed the effect and reconstructed it into a more effective routine Other magic effects depend on meaningful psychological knowledge such as which type of information is difficult to retain or what changes capture attention Behavioural scientists measure and study these factors By combining analytical findings with performer intuitions psychological science begets effective magic Whereas science strives on parsimony and independent replication of results magic thrives on reproducing the same effect with multiple methods to obscure parsimony and minimise detection This Research Topic explores the seemingly orthogonal approaches of scientists and magicians by highlighting the crosstalk as well as rapprochement between psychological science and the art of deception **Popular Photography** ,2010

Professional Results With Canon Vixia Camcorders Warren Bass,2013 We re in the midst of a digital media making revolution and the Canon Vixia G10 and XA10 camcorders are at the forefront Blurring the line between pro sumer and professional the G10 and XA10 are sharper cleaner more compact more portable and boast more professional features than any prior palm sized camcorder in their price range This book is a comprehensive field guide to the concepts strategies equipment and procedures for achieving the best results possible with Canon s top of the line palm sized camcorders The guide focuses on the specific features of the Canon Vixia HF G10 and XA10 but users of other camcorders in the Vixia series the Legria series shooting PAL and other camcorders will find a wealth of relevant information With a high definition palm sized camcorder such as the Canon Vixia G10 or XA10 your potential is limited only by your imagination and your resourcefulness **Digital Boudoir Photography** John G. Blair (photographer.),2006 Values in Evaluation and Social Research Ernest R. House,Kenneth R. Howe,1999-08-03 Values in Evaluation and Social Research provides a compelling examination of the concept of values in program evaluation Magic in Theory Peter Lamont,Richard Wiseman,2005 A useful manual for any magician or curious spectator who wonders why the tricks seem so real this guide examines the psychological aspects of a magician s work Exploring the ways in which human psychology plays into the methods of

conjuring rather than focusing on the individual tricks alone this explanation of the general principles of magic includes chapters on the use of misdirection sleight of hand and reconstruction provides a better understanding of this ancient art and offers a section on psychics that warns of their deceptive magic skills

The Psychology of Individualism Alan S. Waterman, 1984

Magical Mathematics Persi Diaconis, Ron Graham, 2015-10-13 Magical Mathematics reveals the secrets of amazing fun to perform card tricks and the profound mathematical ideas behind them that will astound even the most accomplished magician Persi Diaconis and Ron Graham provide easy step by step instructions for each trick explaining how to set up the effect and offering tips on what to say and do while performing it Each card trick introduces a new mathematical idea and varying the tricks in turn takes readers to the very threshold of today's mathematical knowledge For example the Gilbreath principle a fantastic effect where the cards remain in control despite being shuffled is found to share an intimate connection with the Mandelbrot set Other card tricks link to the mathematical secrets of combinatorics graph theory number theory topology the Riemann hypothesis and even Fermat's last theorem Diaconis and Graham are mathematicians as well as skilled performers with decades of professional experience between them In this book they share a wealth of conjuring lore including some closely guarded secrets of legendary magicians Magical Mathematics covers the mathematics of juggling and shows how the I Ching connects to the history of probability and magic tricks both old and new It tells the stories and reveals the best tricks of the eccentric and brilliant inventors of mathematical magic Magical Mathematics exposes old gambling secrets through the mathematics of shuffling cards explains the classic street gambling scam of three card monte traces the history of mathematical magic back to the thirteenth century and the oldest mathematical trick and much more

The Psychology of Fraud Grace M. Duffield, Peter Nils Grabosky, 2001 Fraud like other crime can best be explained by three factors a supply of motivated offenders the availability of suitable targets and the absence of capable guardians control systems or someone to mind the store so to speak Cohen Felson 1979 In this the first of two papers the authors focus on motivation and other psychological aspects of fraud They identify a number of psychological correlates of fraud offending but note that these are by no means unique to fraud and do not necessarily differentiate fraudsters from law abiding citizens The other two factors opportunities and guardianship provide more scope for fraud control and are addressed in a companion paper on red flags or situational indicia of fraud risk

Experiencing the Impossible Gustav Kuhn, 2019-03-12 How the scientific study of magic reveals intriguing and often unsettling insights into the mysteries of the human mind What do we see when we watch a magician pull a rabbit out of a hat or read a person's mind We are captivated by an illusion we applaud the fact that we have been fooled Why do we enjoy experiencing what seems clearly impossible or at least beyond our powers of explanation In *Experiencing the Impossible* Gustav Kuhn examines the psychological processes that underpin our experience of magic Kuhn a psychologist and a magician reveals the intriguing and often unsettling insights into the human mind that the scientific study of magic provides Magic Kuhn explains creates a

cognitive conflict between what we believe to be true for example a rabbit could not be in that hat and what we experience a rabbit has just come out of that hat Drawing on the latest psychological neurological and philosophical research he suggests that misdirection is at the heart of all magic tricks and he offers a scientific theory of misdirection He explores among other topics our propensity for magical thinking the malleability of our perceptual experiences forgetting and misremembering free will and mind control and how magic is applied outside entertainment the use of illusion in human computer interaction politics warfare and elsewhere We may be surprised to learn how little of the world we actually perceive how little we can trust what we see and remember and how little we are in charge of our thoughts and actions Exploring magic Kuhn illuminates the complex and almost magical mechanisms underlying our daily activities **Magic and Meaning** Eugene Burger, Robert E.
