Putting Auction Theory to Work Paul Milgrom, 2004-01-12 This book provides a comprehensive introduction to modern auction theory and its important new applications It is written by a leading economic theorist whose suggestions guided the creation of the new spectrum auction designs Aimed at graduate students and professionals in economics the book gives the most up to date treatments of both traditional theories of optimal auctions and newer theories of multi unit auctions and package auctions and shows by example how these theories are used The analysis explores the limitations of prominent older designs such as the Vickrey auction design and evaluates the practical responses to those limitations It explores the tension between the traditional theory of auctions with a fixed set of bidders in which the seller seeks to squeeze as much revenue as possible from the fixed set and the theory of auctions with endogenous entry in which bidder profits must be respected to encourage participation
