sleep and its possible function in the higher invertebrates and
vertebrates, including humans. It describes the current concept*

of sleep and its functions, based on research on the mammalian system. To date, electrophysiological recordings of the brain waves, muscle activity, and eye movements are the only tools available for characterizing the sleep architecture in the majority of animals. In mammals and birds, only two distinct types of sleep are found - non-rapid eye movement (NREM) and rapid eye movement (REM) sleep. Since the discovery of REM sleep, studies have been performed to understand the purpose of the two distinct sleep states in higher vertebrates (birds and mammals), and how REM sleep was evolved. The book summarizes the role of both REM and NREM sleep in the proper functioning of the brain and body. It covers various aspects of the role of sleep in important physiological processes, including memory consolidation, induction of synaptic plasticity, energy restoration, enhancing immune response, and maturation of neuronal circuitries during early life. Lastly, the book reviews the effects of chronic/acute sleep deprivation on memory consolidation, obesity, and the immune system in animal models and humans. The Brockville Risk Checklist 4 is a unique, easy-to-use tool that can be adapted to any inpatient or outpatient mental health setting. This one-page instrument is the result of over a decade of use, development and empirical research. This clear and concise manual was informed by extensive research by the authors through coordination with clinical treatment teams who have been using the tool to manage and track risk in regular treatment meetings for clients in a forensic mental health setting. As the tool's name suggests, it originates from a forensic psychiatric facility in Brockville, Ontario, Canada. The Brockville Mental Health Centre, a campus of the Royal Ottawa Health Care Group, is a secure facility treating individuals with severe mental illnesses who have been detained in the facility and in the process of gradual community reintegration. The

facility employs clinicians who are renowned globally for their work with mentally disordered individuals in the forensic system, many of whom have contributed to or given feedback on the BRC4, including the authors. Included in this manual is an Internet link to a free PDF copy of the BRC4 tool, which may be printed for use. The authors of this tool hope this manual is both informative and useful in your research and/or clinical practice and helps contribute to safety and risk management in your treatment setting. All proceeds from this publication will be donated back to the Integrated Forensic Program of the Royal Ottawa Health Care Group. This work was originally issued as a two-volume set, published in 1987 and 1988. It constitutes a definitive presentation of the system of classifying moral judgment built up by Lawrence Kohlberg and his associates over a period of twenty years. Researchers in human development and education around the world, many of whom have worked with interim versions of the system - indeed, all those seriously interested in understanding the development of moral judgment - will find it a useful and accessible resource. Volume 2 includes the scoring systems for three alternate, functionally equivalent forms of Kohlberg's moral judgment interview.
