Winningham's Critical Thinking Cases in Nursing - E-Book Mariann M. Harding, Julie S. Snyder, Barbara A. Preusser, 2013-12-27
Develop your critical thinking and clinical reasoning skills with 150 realistic case studies from the four major clinical practice areas: medical, surgical, pediatric, maternity, and psychiatric/mental health nursing. Each case covers a common problem drawn from actual clinical experiences and written by nurses who are clinical experts. All cases have been thoroughly updated and revised to reflect current clinical practices with integrated content on pharmacology, nutrition, and diagnostic laboratory tests to encourage you to think critically about all aspects of care. This fifth edition also features an increased emphasis on patient management and new documentation and communication exercises. Plus, new NCLEX Examination format questions help you prepare for success on the NCLEX Examination and provide safe, quality patient care. Three-part organization presents cases in three parts: 1. Medical/Surgical Cases, 2. Pediatric/Maternity and Psychiatric Cases, and 3. Other/Advanced Cases, the latter covering key topics such as multi-system disorders and emergency situations. Realistic case study approach incorporates cases drawn from actual clinical experiences to help you identify changes, anticipate possible complications, and initiate therapeutic interventions. Increasing case complexity provides you with a foundation on which to build as you advance to more difficult cases. Two new pediatric case studies strengthen your ability to recognize and effectively manage common disorders presenting in pediatric patients. New NCLEX Examination format questions have been added throughout, including multiple choice, prioritization, ordering, chart exhibit, and dosage calculation questions. Increased number of higher-level questions requires clinical reasoning rather than simply memorizing and recalling information. An emphasis on patient management reinforces the type of clinical decision making needed in the clinical setting, as well as reflecting the type of questions on the latest NCLEX Examination. Over 25 new illustrations and graphics, such as ECG strips, lab diagnostic test reports, anatomical diagrams, and medication labels, are now interwoven throughout the book. New documentation and communication exercises ask you to document relevant patient information or to use the SBAR communication technique to communicate patient findings to the physician.

Fish Energetics Peter Tytler,Peter Calow,2012-12-06 It is almost thirty years since Professor G G Winberg established the basis for experimental studies in fish energetics with the publication of his monograph Rate of Metabolism and Food Requirements of Fishes His ultimate aim was to develop a scientific approach to fish culture and management and the immense volume of literature generated in the ensuing years has been mainly in response to the demand for information from a rapidly expanding world wide aquaculture industry and to the shortcomings of contemporary practices in fisheries management The purpose of this book is not to review this literature comprehensively but assuming an informed readership to focus attention on topics in which new knowledge and theory are beginning to be applied in practice Most emphasis has been placed on food feeding production growth and reproduction and energy budgeting as these have most influence on the development of fish culture Some chapters offer practical advice for the selection of methods and warn of pitfalls in previous approaches In others the influence of new theory on the interpretation of studies in fish energetics is discussed in the context of resource allocation and adaptation We hope that the scope of material presented here will have sufficient interest and value to help significantly to fulfil Winberg s original objectives
