*Le Mans 1949-59* Mar 14 2024 This was a very important period in the Le Mans story. Ferrari and Jaguar raced to stake claims as the foremost manufacturers of high-performance cars. Mercedes-Benz came back from war-ravaged Germany and again set the standards in race-car engineering. Aston Martin finally won at its 20th attempt. Enormous crowds - approaching half a million people - saw the first rear-engined saloons to compete at Le Mans, and the first mid-engined sports-racing cars, and the first diesels. On-track performance soared. In 1949 the fastest car hit 135mph on the unique Mulsanne straight. Before the end of the 1950s, top speeds exceeded 180mph. This fascinating book tells the stories of these increasingly potent racing cars and conveys the punishing nature of an incomparable event - the ultimate test of the mental and physical abilities of the fragile individuals who make up racing teams, be they drivers, engineers, strategists or mechanics. Highly detailed year-by-year coverage of the decade's ten races, giving over 30 pages of information and photographs for each year. - Official status provides a number of unique features, including the reproduction of the full-color race poster artwork for each year and photographs from the ACO's archives. - The images include rare color, and the emphasis is on photographs that enthusiasts will not have seen before. - The story of each race is told through photographs and an accompanying commentary. - Complete data for each year includes technical regulations, entry list, circuit changes (with diagram), lap chart, full

results and category awards. - The whole work is beautifully designed and presented. - The 1950s was a decade of post-war recovery, with defeated Germany providing only one of the period's race winners - Mercedes-Benz in 1952. Britain, by contrast, took six victories - five for Jaguar, one for Aston Martin.

*The Selling of 9/11* Jun 05 2023 The Selling of 9/11 argues that the marketing and commodification of the terrorist attacks of September 11, 2001, reveal the contradictory processes by which consumers in the United States (and around the world) use, communicate, and construct national identity and their sense of national belonging through cultural and symbolic goods. Contributors illuminate these processes and make important connections between myths of nation, practices of mourning, theories of trauma, and the politics of post-9/11 consumer culture. Their essays take critical stock of the role that consumer goods, media and press outlets, commercial advertising, marketers and corporate public relations have played in shaping cultural memory of a national tragedy.

*Borderlands* Sep 15 2021 "The periphery of a place can tell us a great deal about its heartland. along the edge of a nation's territory, its real prejudices, fears and obsessions - but also its virtues - irrepressibly bubble up as its people confront the 'other' whom they admire, or fear, or hold in contempt, and know little about. September 11, 2001, changed the United States utterly and nothing more so than the physical reality, the perception - and the meaning - of its borders." -from *Borderlands* Derek Lundy turns sixty at the end of a year in which three good friends have died. He feels the need to do something radical, and sets out on his motorcycle - a Kawasaki KLR 650 cc single-cylinder "thumper," which he describes as "unpretentious" and also "butt-ugly." Fascinated by the United States' post-9/11 passion for security, particularly on its two international borders, he chooses to investigate. He takes a firsthand look at both borders. The U.S.-Mexican borderlands, often disorderly and violent, operate according to their own ad hoc system of rules and conventions, and are distinct in many ways from the two countries the border divides. When security trumps trade, the economic well-being of

both countries is threatened, and the upside is difficult to determine. American policy makers think the issues of drugs and illegals are ample reason to keep building fences to keep Mexicans out, even with no evidence that fences work or are anything but cruel. Mexicans' cheap labour keeps the wheels turning in the U.S. economy yet they are resented for trying to get into the country illegally (or legally). More people have died trying to cross this border than in the 9/11 attacks. At almost 9,000 kilometres, the U.S. border with Canada is the longest in the world. The northern border divides the planet's two biggest trading partners, and that relationship demands the fast, easy flow of goods and services in both directions. Since the events of 9/11, however, the United States has slowly and steadily choked the flux of trade: "just-in-time" parts shipments are in jeopardy; trucks must wait for inspection and clearance; people must be questioned. The border is "thickening." In prose that is compelling, impressive and at times frightening, Derek Lundy's incredible journey is illuminating enough to change minds, as great writing can sometimes do.

**Corvette from the Inside: The 50 Year Development History as Told by Dave McLellan** Feb 06 2021 Corvette From the Inside is a very different kind of Corvette book. It is a guided tour through Corvette history by a man who was intimately involved with America's favorite sports car for seventeen of the most exciting years of his professional life. The challenges McLellan faced in the 70s and early 80s as he struggled to lead the Corvette program from the edge of failure to

resounding success serve as a wonderfully detailed case-study in how the American automotive industry relied on the ingenuity, intellect, and pure determination of its top engineers to resurrect itself from a near-fatal slump and compete once again with Asian and European manufacturers. Dave McLellan joined General Motors in 1959, when the Corvette was only six years old. As a result, he looks at the early tale of the Corvette from a unique insider's perspective. He recounts the background of the Corvette's creation and provides fascinating insight into the Zora Arkus-Duntov years. He discusses the technical obstacles and solutions that paralleled the development of the Corvette from a primitive and poorly executed six-cylinder sporty car to one of the fastest and best handling sports cars ever conceived. Impressed by McLellan's engineering talents, GM groomed him to assume the helm at Corvette Engineering, which he did upon Duntov's retirement in 1975. McLellan stepped into the job of Corvette Chief Engineer just as the car hit an all-time performance low. He gives his first-hand account of the transition from the underpowered C3 Corvette of the mid and late 70s to the formidable C4 and ZR-1 Corvettes with which McLellan will always be identified. In describing his experiences with the Corvette, his story traces the path of the auto industry from the dark days of the 1970s when OPEC and strangling emissions requirements took the punch out of the American muscle car, to the 1990s when the American super car-exemplified by the incredible four-cam ZR-1 Corvette-emerged as a world class competitor.

[At the Bottom of Everything](#) Jul 26 2022 It's been ages since the "incident" that estranged former best friends Adam and Thomas, and Adam has long since decided he's better off, even if his own life hasn't exactly turned out as planned. Ten years after the two friends spoke their last words, Adam is working as a tutor, sleeping with the mother of a student, and spending most of his nights looking up his ex-girlfriend on Facebook. But when he receives an email from Thomas's mother begging for his help, he finds himself drawn back into his old friend's world. Thomas hasn't been doing well, and now he's disappeared while traveling in India. As Adam embarks upon a magnificently strange and

unlikely journey, Ben Dolnick unspools a tale of friendship, spiritual reckoning, and redemption.
