Contemporary Approaches to Neuropsychological Assessment Gerald Goldstein, Theresa M. Incagnoli, 2013-06-29 This volume reflects in part an update of *Clinical Application of Neuropsychological Test Batteries* edited by Theresa Incagnoli Gerald Goldstein and Charles Golden some 10 years ago While the initial concept of the present editors involved doing a straightforward update of each chapter it soon became apparent that the field of clinical neuropsychology had changed so dramatically and rapidly that substantial changes in the outline had to be made It was our view that sufficient interest remained in the standard comprehensive neuropsychological test batteries to make an update worthwhile We asked four senior people to take on this assignment James Moses Jr and Arnold Purisch in the case of the Luria Nebraska Battery and James Reed and Homer Reed for the Halstead Reitan Battery These individuals all have long term associations with these procedures and can be viewed as pioneers in their development However it also seemed to us that there was an increasing interest in the psychometric aspects of the standard procedures and in assessment issues related to the relative merits of using standard or individualized assessment strategies Thus we have chapters by Elbert Russell and Gerald Goldstein that provide discussions of these current methodological and clinical issues During the past 10 years the cognitive revolution has made a strong impact on neuropsychology The interest of cognitive psychologists in brain function has increased dramatically and we now have an active field of cognitive neuropsychology something that was only beginning 10 years ago

Clinical Neuropsychology Mark E. Maruish, James A. Moses, 2013-05-13 With the emergence of clinical neuropsychology as one of the fastest growing specialties in psychology comes the need for current and future practitioners to stay abreast of the most recent research A number of professional journals more than adequately meet this need But there is also a need to stay up to date on the current thinking about important problems Drawing upon the expertise of leaders in the field the editors intent in this book was to provide the practitioner with a source for discussions of topics that are vital to their ongoing development as clinical neuropsychologists but that generally are not addressed in the literature to any great degree

Neuropsychological Assessment of Neuropsychiatric Disorders Igor Grant, Kenneth M. Adams, 1996 A 1996 survey of the members of the American Board of Professional Psychology Diplomates published by The Clinical Neurologist journal selected the first edition of this book as one of the Essential Books and Journals in North American Clinical Neuropsychology a list which included only 10 other titles The Second Edition has improved further on this high standard While the authors have retained the same general structure with the addition of a set of three chapters on psychosocial outcomes virtually the entire book has been rewritten and thoroughly updated to reflect recent developments in this area of knowledge Part I features new chapters on the Iowa Benton approach on cognitive screening methods and on computers and memory Part II has been expanded with new chapters on Tourette s syndrome acute and chronic hypoxemia HIV infection schizophrenia Huntington s disease and an expanded chapter on Parkinson s disease Part III is entirely new and it focuses on life quality outcome in head injury and pulmonary disease Considerably enlarged in size this book will remain the basic reference on the neuropsychological aspects of diseases affecting brain and behavior

The Role of Technology in Clinical Neuropsychology Robert L. Kane, Thomas D. Parsons, 2017-03-24 Neuropsychology as a field has been slow to embrace and exploit the potential offered by technology to either make the assessment process more efficient or to develop new capabilities that augment the assessment of cognition. The Role of Technology in Clinical Neuropsychology details current efforts to use technology to enhance cognitive assessment with an emphasis on developing expanded capabilities for clinical assessment. The first sections of the book provide an overview of current approaches to computerized assessment along with newer technologies to assess behavior. The next series of chapters explores the use of novel technologies and approaches in cognitive assessment as they relate to developments in telemedicine, mobile health, and remote monitoring, including developing smart environments. While still largely office based, health care is increasingly moving out of the office with an increased emphasis on connecting patients with providers and providers with other providers remotely. Chapters also address the use of technology to enhance cognitive rehabilitation by implementing conceptually based games to teach cognitive strategies and virtual environments to measure outcomes. Next, the chapters explore the use of virtual reality and scenario based assessment to capture critical aspects of performance not assessed by traditional means and the implementation of neurobiological metrics to enhance patient assessment. Chapters also address the use of imaging to better define cognitive skills and assessment methods along with the integration of cognitive assessment with imaging to define the functioning of brain networks. The final section of the book discusses the ethical and methodological considerations needed for adopting advanced technologies for neuropsychological assessment. Authored by numerous leading figures in the field of neuropsychology, this volume emphasizes the critical role that virtual environments, neuroimaging, and data analytics will play as clinical neuropsychology moves forward in the future.
