The boss, (oh, I work at The Opinionated Daily News, just call me George)...ah... stuck... uh....assigned... me to interview turtles, terrapins, and tortoises at La Cite` du Tortoises, which is located in Pennsylvania. Sam and his friends get themselves into some weird situations. Like shopkeeper Walter Wall, who made a grab for a bug, over reached himself and slud (not MY word) into the crik (Pennsylvania Dutch for creek), and floated unwillingly and unhappily down the crik, eventually ending belly up in Johnstown. Through a series of rescues he finally arrived home... which annoyed some "friends". When the turtles were being collected by bad men, Alice, the snapping turtle, joined the resistance and fortunately, all were saved. Jock, the Lock-box turtle has an amazing ability to literally close up shop and completely hide himself in his house, (his secret- hinges on the bottom shell); he and his buddy, tiny Bog turtle, Herkimer, joined in feasting in farmer John's garden, (they called it borrowing), happily gobbling up his delectable produce, and sometimes joined the group which meets in La Tortoise Bar and Grill most evenings. Due to the turtle's misuse, abuse, and mangling of the good King's English, I have translated and transcribed these articles and have sent them to the paper. Organized in clear and concise fashion, written in an engaging and lively manner, and furnished with black-and-white photographs, drawings, and maps, Handbook of Turtles (first published in 1952) gives a comprehensive summary of 79 species and subspecies of North American turtles. In the foreword to 1995 paperback edition, J. Whitfield Gibbons, renowned ecologist and natural history author, brings the book into historical perspective and supplies information to bring it up to date. In the introduction, Carr considers such topics as turtle physiology, reproduction, growth, adaptation, and behavior. The introduction also includes discussions of methods for collecting specimens, the evolutionary origins of turtles,

and the mythology and folklore surrounding the turtle. The second part of the volume is organized according to keys that give identifying characteristics, life histories, and illustrations of each species. Under headings of geographical range, distinguishing features, description, habitat, habits, breeding, feeding, and economic importance, the volume provides detailed accounts of the various species and subspecies. Throughout Carr offers colorful recollections and anecdotes about his fieldwork and research. Usually, turtles do not have hair but Ned, the turtle, thought that was unfair. This book surveys the myriad of turtle anatomy, habitat, & life cycles throughout the ages. Project director of the International Wildlife Coalition, Orenstein presents a popular book

about turtles, the term he uses for almost all marine, aquatic, and terrestrial species of the order Testudines. His own background is in ornithology rather than herpetology, but his work in wildlife conservation has made him aware of the plight of turtles throughout the world, and hopes people will help protect them if they get to know them a little better. He includes many color photographs. Turtles, almost alone among reptiles, have earned both human interest and affection. Our fascination with turtles, though, has not helped them much. Sought after for food, as pets, and for tortoiseshell, their habitats under attack on land and sea, turtle populations are in decline around the world. Understanding turtles is not only interesting, but also important. Turtles, tortoises, and terrapins have been on earth since the Triassic Period, approximately 200 million years ago. Their exact origins are uncertain, though - it is still unclear from which group of reptiles turtles sprang. Although the earliest fossils are clearly turtles, their anatomy has changed dramatically over time. In addition, turtle species vary greatly in such basic characteristics as anatomy and habitat preferences. Turtles, Tortoises and Terrapins surveys the myriad of turtle anatomy, habitat, and life cycles throughout the ages. Human activities on the land and at sea pose the greatest threat that turtles have faced in the last 200 million years. The battle to save turtles goes on, and this book provides an important voice in turtle ecology. Turtles, Tortoises and Terrapins is the perfect resource for anyone interested in all facets of these amazing and diverse reptiles. "One animal has a lightweight shell. Dr. Seuss presents three modern fables in the rhyming favorite *Yertle the Turtle and Other Stories*. A fascinating exploration into the world of turtles across the globe; Laufer charts the lore, love, and peril to a beloved species. *Dreaming in Turtle* is a compelling story of a stalwart animal prized from prehistory through to today—an animal threatened by human greed, pragmatism, and rationalization. It stars turtles and shady and heroic human characters both, in settings ranging from luxury redoubts to degraded habitats, during a time when the confluence of easy global trade, limited supply, and inexhaustible demand has accelerated the stress on species. The growth of the middle class in high-population regions like China, where the turtle is particularly valued, feeds this perfect storm into which the turtle finds itself lashed. This is a tale not just of endangered turtles but also one of overall human failings, frailties, and vulnerabilities—all punctuated by optimistic hope for change fueled by dedicated turtle champions. ****WINNER OF THE INTERNATIONAL 2013-2014 MORNING CALM MEDAL**** This multicultural children's book presents a heartwarming Korean fairy tale about a little girl and a fortunate encounter. A wonderful heartwarming story of loving and caring for a pet for over forty-five years. A book for young and old and anyone who has ever loved a pet. Sea turtles have existed since the time of the dinosaurs. But now, suddenly, the turtles are dying, ravaged by a mysterious plague that some biologists consider the most serious epidemic now raging in the natural world. Perhaps most important, sea turtles aren't the only marine creatures falling prey to deadly epidemics. Over the last few decades diseases have been burning through nearshore waters around the world with unprecedented lethality. What is happening to the sea turtle, and how can it be stopped? In this fascinating scientific detective story, Osha Gray Davidson tracks the fervent efforts of the extraordinary and often quirky scientists, marine biologists, veterinarians, and others racing against the clock to unravel a complicated biological and environmental puzzle and keep the turtles from extinction. He follows the fates of particular turtles, revealing their surprisingly distinct personalities and why they inspire an almost spiritual devotion in the humans who come to know them. He also explores through vivid historical anecdotes and examples the history of man's relationship to the sea, opening a window onto the role played by humans in the increasing number of marine die-offs and extinctions. Beautifully written, intellectually provocative, Fire in the

Turtle House reveals how emerging diseases wreaking havoc in the global ocean pose an enormous, direct threat to humanity. This is science journalism at its best.
