A Series Land Rover has to be the ultimate life-sized automotive jigsaw puzzle. Simple to repair, with a good supply of new and used parts, a restoration is well within the capabilities of an amateur mechanic. While the official Parts and Workshop Manuals can be considered essential reading they were written for professional mechanics working on reasonably new, unmodified vehicles - not a 60 year old model assembled with

parts from different eras. They will tell you very little about parts compatibility over the generations, how to repair a bulkhead or front panel or the best techniques to assemble your vehicle onto a new chassis. This manual seeks to answer many of the commonly asked questions and offers practical solutions, tips and techniques for the common problems encountered when restoring and maintaining a Series Land Rover. It covers:

- history, vehicle development and compatibility of parts
- the overhaul of the major mechanical components including engine, gearbox and axles
- practical techniques for body repairs, fitment and alignment
- in-depth chassis and bulkhead repairs
- how to decide between saving or replacing a major component
- the current availability of components
- major current restoration trends: functional rebuild, resto-mod build, patina recommission or concours restoration

The Manual of Tests and Criteria contains criteria, test methods and procedures to be used for classification of dangerous goods according to the provisions of Parts 2 and 3 of the United Nations Recommendations on the Transport of Dangerous Goods, Model Regulations, as well as of chemicals presenting physical hazards according to

the Globally Harmonized System of Classification and Labelling of Chemicals (GHS). As a consequence, it supplements also national or international regulations which are derived from the United Nations Recommendations on the Transport of Dangerous Goods or the GHS. At its ninth session (7 December 2018), the Committee adopted a set of amendments to the sixth revised edition of the Manual as amended by Amendment 1. This seventh revised edition takes account of these amendments. In addition, noting that the work to facilitate the use of the Manual in the context of the GHS had been completed, the Committee considered that the reference to the "Recommendations on the Transport of Dangerous Goods" in the title of the Manual was no longer appropriate, and decided that from now on, the Manual should be entitled "Manual of Tests and Criteria". Satisfy your dream collector-car desires with this one-stop reference for starting or expanding your collection beyond traditional classics and muscle cars. Focusing on the interests and needs of Generation X and Millennial car collectors, The NextGen Guide to Car Collecting offers a concise history of car collecting to present day, guidance on car buying and living the car-collector life, and an overview

of collector cars with a focus on cars built from the 1970s through the 1990s while also touching on more contemporary cars. Chapters highlight Japanese, American, and European cars, particularly those models that have experienced the greatest growth in collector interest over the past decade. The NextGen Guide to Car Collecting explores the many ways the Internet and social media have changed the classic car marketplace. You'll learn how to buy a classic car online without suffering buyer's remorse, as well as the four critical keys to a happy collector-vehicle relationship: 1) possessing discretionary cash for the initial purchase; 2) obtaining a thorough knowledge of the car and its ownership; 3) the critical pre-purchase inspection; and 4) access to a work space. You'll also find out why the popularity of late twentieth-century specialty cars will continue to grow (think increasing electronic complication and the still-large number of enthusiasts for whom "self-driving" means driving themselves) and explore the attributes that makes these cars desirable collector vehicles. In addition, the book looks at the significant increases in quality and reliability of post-1970s machines and how that impacts their collectibility. Finally, learn why expectations that your newfound classic could outlast our current crop of lithium-ion-dependent electric cars may not be unrealistic: recent developments like ride-

hailing and sharing services; expanded public transit; rental bikes and scooters; and garage condos and other storage options could actually extend the life of your “new” classic permitting you to truly tailor the use of your classics. Whether your collection requires a one-stall garage or a pole barn, the practical, useful information and keen perspective of *The NextGen Guide to Car Collecting* will ensure you pull this volume from your shelf time and again. This fourth edition provides an updated look at information organization, featuring coverage of the Semantic Web, linked data, and EAC-CPF; new metadata models such as IFLA-LRM and RiC; and new perspectives on RDA and its implementation. This latest edition of *The Organization of Information* is a key resource for anyone in the beginning stages of their LIS career as well as longstanding professionals and paraprofessionals seeking accurate, clear, and up-to-date guidance on information organization activities across the discipline. The book begins with a historical look at information organization methods, covering libraries, archives, museums, and online settings. It then addresses the types of retrieval tools used throughout the discipline—catalogs, finding aids, indexes, bibliographies, and search engines—before describing the functionality of systems, explaining the basic principles of system design, and defining how they affect information organization. The

principles and functionality of metadata is next, with coverage of the types, functions, tools, and models (particularly FRBR, IFLA-LRM, RDF) and how encoding works for use and sharing—for example, MARC, XML schemas, and linked data approaches. The latter portion of the resource describes specific activities related to the creation of metadata for resources. These chapters offer an overview of the major issues, challenges, and standards used in the information professions, addressing topics such as resource description (including standards found in RDA, DACS, and CCO), access points, authority control, subject analysis, controlled vocabularies—notably LCSH, MeSH, Sears, and AAT—and categorization systems such as DDC and LCC.
