*An Age of Accountability* John L. Rury, 2023-10-13 An Age of Accountability highlights the role of test based accountability as a policy framework in American education from 1970 to 2020 For more than half a century the quest to hold schools and educators accountable for academic achievement has relied almost exclusively on standardized assessment The theory of change embedded in almost all test based accountability programs held that assessment with stipulated consequences could lead to major improvements in schools This was accomplished politically by proclaiming lofty goals of attaining universal proficiency and closing achievement gaps which repeatedly failed to materialize But even after very clear disappointments no other policy framework has emerged to challenge its hegemony The American public today has little confidence in institutions to improve the quality of goods and services they provide especially in the public sector As a consequence many Americans continue to believe that accountability remains a vital necessity even if educators and policy scholars disagree

*Learning Levels and Gaps in Pakistan* Jishnu Das, Priyanka Pandey, Tristan Zajonc, 2006 Abstract The authors report on a survey of primary public and private schools in rural Pakistan with a focus on student achievement as measured through test scores Absolute learning is low compared with curricular standards and international norms Tested at the end of the third grade a bare majority had mastered the K I mathematics curriculum and 31 percent could correctly form a sentence with the word school in the vernacular Urdu As in high income countries bivariate comparisons show that higher learning is associated with household wealth and parental literacy In sharp contrast to high income countries these gaps decrease dramatically in a multivariate regression once differences between children in the same school are looked at Consequently the largest gaps are between schools The gap in English test scores between government and private schools for instance is 12 times the gap between children from rich and poor families To contextualize these results within a broader South Asian context the authors use data from public schools in the state of Uttar Pradesh in India Levels of learning and the structure of the educational gaps are similar in the two samples As in Pakistan absolute learning is low and the largest gaps are between schools the gap between good and bad government schools for instance is 5 times the gap between children with literate and illiterate mothers
