

**Laboratory Activity #1 — Student Laboratory Packet****Relationships and Biodiversity***A Laboratory Activity for the Living Environment***Introduction**

*Botana curus* is a valuable plant because it produces Curol, a compound used for treating certain kinds of cancer. Curol cannot be produced in the laboratory. *Botana curus* grows very slowly and is on the endangered species list, so its ability to provide Curol in large quantities is limited.

Species that are more closely related to *Botana curus* are more likely to produce the important substance Curol. Three similar plant species that are plentiful (X, Y, and Z) may be related to *Botana curus*. You will work as a researcher to:

- gather structural and molecular evidence to determine which plant species is most closely related to the hypothetical species, *Botana curus*
- use this evidence to decide which plant species is most likely to serve as a source of the important substance Curol

**Safety**

- You will need to wear goggles while conducting Tests 4 and 5.
- Do not eat or drink anything in the laboratory while doing this laboratory activity.

*Important Note:* Record all of your data and answers on these laboratory sheets. You will need to keep them for review before the Regents Examination. Later, you will need to transfer your answers to a separate Student Answer Packet. Your teacher will use the packet in grading your work, and the school will retain it as evidence of your completion of the laboratory requirement for the Living Environment Regents Examination.

**Structural Evidence for Relationships**

Perform the following tests and record your observations in Table 1 on page 8 of this packet. Use a hand lens or microscope as needed.

*Test 1-Structural Characteristics of Plants*

- Do not remove the plant samples from the plastic bags/cards.
- Compare the structural characteristics of the plant samples. Record your observations in Table 1 (see page 8).

*Test 2-Structural Characteristics of Seeds*

- Do not remove the seed samples from the plastic bags/cards.
- Compare the structural characteristics of the seed samples. Record your observations in Table 1.

"Relationships and Biodiversity" is a laboratory activity produced by the State Education Department for use in fulfilling part of the laboratory requirement for the Regents Examination in Living Environment. Reproducing any part of this laboratory activity by other than New York State school personnel is illegal. **A Framework for K-12 Science Education** National Research Council, Division of Behavioral and Social Sciences and Education, Board on Science Education, Committee on a Conceptual Framework for New K-12 Science Education Standards, 2012-02-28 Science engineering and technology permeate nearly every facet of modern life and hold the key to solving many of humanity's most pressing current and future challenges. The United States position in the global economy is declining in part because U.S. workers lack fundamental knowledge in these fields. To address the critical issues of U.S. competitiveness and to better prepare the workforce, A Framework for K-12 Science Education proposes a new approach to K-12 science education that will capture students' interest and provide them with the necessary foundational knowledge in the field. A Framework for K-12 Science Education outlines a broad set of expectations for students in science and engineering in grades K-12. These expectations will inform the development of new standards for K-12 science education and subsequently revisions to curriculum, instruction, assessment, and professional development for educators. This book identifies three dimensions that convey the core ideas and practices around which science and engineering education in these grades should be built. These three dimensions are crosscutting concepts that unify the study of science through their common application across science and engineering, scientific and engineering practices, and disciplinary core ideas in the physical sciences, life sciences, and earth and space sciences, and for engineering, technology, and the applications of science. The overarching goal is for all high school graduates to have sufficient knowledge of science and engineering to engage in public discussions on science-related issues, be careful consumers of scientific and technical information, and enter the careers of their choice. A Framework for K-12 Science Education is the first step in a process that can inform state-level decisions and achieve a research-grounded basis for improving science instruction and learning across the country. The book will guide standards developers, teachers, curriculum designers, assessment developers, state and district science administrators, and educators who teach science in informal environments.

*Problem-Solving in Conservation Biology and Wildlife Management* James P. Gibbs, Malcolm L. Hunter, Jr., Eleanor J. Sterling, 2011-08-31 This set of exercises has been created expressly for students and teachers of conservation biology and wildlife management who want to have an impact beyond the classroom. The book presents a set of 32 exercises that are primarily new and greatly revised versions from the book's successful first edition. These exercises span a wide range of conservation issues: genetic analysis, population biology, and management, taxonomy, ecosystem management, land use planning, the public policy process, and more. All exercises discuss how to take what has been learned and apply it to practical, real-world issues. Accompanied by a detailed instructor's manual and a student website with software and support materials, the book is ideal for use in the field lab or classroom. **Biology 2e** Mary Ann Clark,Jung Ho Choi,Matthew M. Douglas,2018-03-28 Biology 2e is designed to cover the scope and sequence requirements of a typical two semester biology course for science majors The text provides comprehensive coverage of foundational research and core biology concepts through an evolutionary lens Biology includes rich features that engage students in scientific inquiry highlight careers in the biological sciences and offer everyday applications The book also includes various types of practice and homework questions that help students understand and apply key concepts

**Concepts of Biology** Samantha Fowler,Rebecca Roush,James Wise,2018-01-07 Concepts of Biology is designed for the single semester introduction to biology course for non science majors which for many students is their only college level science course As such this course represents an important opportunity for students to develop the necessary knowledge tools and skills to make informed decisions as they continue with their lives Rather than being mired down with facts and vocabulary the typical non science major student needs information presented in a way that is easy to read and understand Even more importantly the content should be meaningful Students do much better when they understand why biology is relevant to their everyday lives For these reasons Concepts of Biology is grounded on an evolutionary basis and includes exciting features that highlight careers in the biological sciences and everyday applications of the concepts at hand We also strive to show the interconnectedness of topics within this extremely broad discipline In order to meet the needs of today s instructors and students we maintain the overall organization and coverage found in most syllabi for this course A strength of Concepts of Biology is that instructors can customize the book adapting it to the approach that works best in their classroom Concepts of Biology also includes an innovative art program that incorporates critical thinking and clicker questions to help students understand and apply key concepts

*Urban Watersheds* Daniel Rogers, 2020-05-06 Understanding that the natural world beneath our feet is the point at which civilization meets the natural world is critical to the success of restoration and prevention efforts to reduce contaminant impacts and improve the global environment because of one simple fact contaminants do not respect country borders Contaminants often begin their destructive journey immediately after being released and can affect the entire planet if the release is in just the right amount at just the right location and at just the right time Taking an interdisciplinary approach *Urban Watersheds Geology Contamination Environmental Regulations and Sustainability Second Edition* presents more than 30 years of research and professional practice on urban watersheds from the fields of environmental geology geochemistry risk analysis hydrology and urban planning The geological characteristics of urbanized watersheds along with the physical and chemical properties of their common contaminants are integrated to assess risk factors for soil groundwater and air This new edition continues to examine the urban environment and the geology beneath urban areas evaluates the contamination that affects watersheds in urban regions and addresses redevelopment strategies Features of the Second Edition Examines contaminants and the successes of environmental regulation worldwide and highlights the areas that need improvement Describes several advances in investigation techniques in urban regions that now provide a huge leap forward in data collection resolution and accuracy Explains the importance of understanding the geological and hydrogeologic environments of urban and developed regions Provides new and enhanced methods presented as a sustainability model for assessing risks to human health and the environment from negative human induced contaminant impacts Includes a new chapter that surveys how environmental regulations have been successful or have failed at protecting the air water and land in urban areas Suitable for use as a textbook and as a professional practice reference the book includes case studies on successful and unsuccessful approaches to contaminant remediation as well as practical methods for environmental risk assessment PowerPoint presentations of selected portions of the book are available with qualifying course adoption Daniel T Rogers is currently the Director of Environmental Affairs at Amsted Industries Inc in Chicago Illinois His writings address environmental geology hydrogeology geologic vulnerability and mapping contaminant fate and transport urban geology environmental site investigations contaminant risk brownfield redevelopment and sustainability He has taught geology and environmental chemistry at Eastern Michigan University and the University of Michigan

**Status of Pollinators in North America** National Research Council, Division on Earth and Life Studies, Board on Agriculture and Natural Resources, Board on Life Sciences, Committee on the Status of Pollinators in North America, 2007-05-13 Pollinators insects birds bats and other animals that carry pollen from the male to the female parts of flowers for plant reproduction are an essential part of natural and agricultural ecosystems throughout North America For example most fruit vegetable and seed crops and some crops that provide fiber drugs and fuel depend on animals for pollination This report provides evidence for the decline of some pollinator species in North America including America's most important managed pollinator the honey bee as well as some butterflies bats and hummingbirds For most managed and wild pollinator species however population trends have not been assessed because populations have not been monitored over time In addition for wild species with demonstrated declines it is often difficult to determine the causes or consequences of their decline This report outlines priorities for research and monitoring that are needed to improve information on the status of pollinators and establishes a framework for conservation and restoration of pollinator species and communities
