When "drivers" simply brought injured patients to the hospital. When the EMS industry was in its infancy. A time before Nancy Caroline. Dr. Caroline's work transformed EMS and the entire paramedic field. She created the first national standard curriculum for paramedic training in the United States. She also wrote the first paramedic textbook: Emergency Care in the Streets. The impact that Dr. Caroline had on EMS and health care spanned across the U.S. and abroad. From establishing EMS systems to training paramedics, to providing better nourishment and health care for orphans, her work had a profound impact on humanity. Throughout her life, Dr. Caroline brought a sense of excitement, joy, and humor to her work. The American Academy of Orthopaedic Surgeons is proud to continue Dr. Caroline's legacy. Her sense of excitement and humor live on in this text, which is dedicated to her. The Sixth Edition honors Dr. Caroline's work with a clear, fun, understandable writing style for which she was known. Welcome back a familiar training companion to your classroom! Say hello to Sidney Sinus, AV Abe, and a cast of memorable characters and amusing anecdotes. Make learning for your students more fun! This is the eBook of the printed book and may not include any media, website access codes, or print supplements that may come packaged with the bound book. The leader in the field, Emergency Medical Responder, Ninth Edition, provides clear first

responder-level training for fire service, emergency, law enforcement, military, civil, and industrial personnel. The new ninth edition retains many successful features from previous editions and includes new topics and concepts that have recently become part of most Emergency Medical Responder programs. The foundation of this text is the new National Emergency Medical Services Education Standards for Emergency Medical Responder, and it also includes the 2010 American Heart Association guidelines for Cardiopulmonary Resuscitation and First Aid. Stress, anxiety, depression, trauma, post-traumatic stress disorder (PTSD), bullying, and burnout have all become "accepted realities" for first responders in the modern workplace. This workbook unpacks contemporary workplace realities, educates you about trauma, and helps you build your personalized recovery plan for transformation, recovery, and healing. This recovery program has eight core purposes: Validate your current situation. This recovery program begins by validating your experiences and breaking through any denial you may be experiencing by examining all the ways you could be traumatized at work. Identify your realities. Once you understand how you've been traumatized, you'll learn about how trauma develops and how to break through the defenses that protect you from the painful experiences you're facing. Understand workplace trauma. Armed with a deeper understanding of what trauma is, how it develops, and how you react to trauma, you will be able to identify the support you'll need to heal and recover. Build your recovery team and develop your action plan. Useful tools and techniques will help you connect with and build your team of support professionals and advocates. Once you begin working with your team, you'll start the recovery process by acquiring a set of skills and techniques to help you weather the storm and begin healing. Grieve, mourn, and let go. Recovery will take you on a journey of grieving, mourning, and letting go, which will transport you to a new sense of calm and acceptance. I'll break down this journey into the stages you'll travel through to get to the other side. Maintain your recovery. Finally, I'll share helpful ways to maintain your recovery, manage setbacks with compassion, and track your progress so you can proactively navigate the inevitably choppy waters as you continue your healthy and productive recovery. Adapt and adjust to the impacts of the COVID-19 Pandemic. The COVID-19 global Pandemic has left a lasting impact on all our lives. This section will review the Pandemic's mental health, physical health, and social implications with helpful tools and techniques to help you manage the trauma and stress the Pandemic brings. In addition, gems of wisdom and learnings within the research literature will help you navigate the Pandemic and Post-Pandemic worlds effectively. Learn interactively with workbook exercises. Workbook exercises will help you digest the content, reflect on your situation, learn from that reflection, and incrementally create a personalized recovery plan.

Each exercise in the workbook walks you through a process of self-reflection and self-discovery to help you understand and make sense of your situation. *First Responder Careers Expose Individuals to Higher Risks of Developing Trauma* Some careers include a higher likelihood of experiencing traumatic events that can lead to the development of PTSD. Serving in the military is a high-risk factor for developing PTSD. However, combat veterans develop PTSD at different rates depending on the severity and length of exposure to traumatic experiences. There are also high incidences of reported sexual harassment and sexual abuse in the military. As a result, the rates of PTSD are relatively high compared to the overall prevalence in the general population. Not only can law enforcement officers experience direct threats and stressful conditions, but they also regularly witness the devastating effects of assaults, robberies, kidnappings, and violent events. However, individuals in this profession have lower-than-expected rates of PTSD, surprisingly. An estimated 20 percent overall may result from having access to counseling and rigorous pre-employment screenings. EMTs and paramedics are routinely exposed to life-threatening incidents and have more health problems than individuals in other occupations. PTSD rates in this group are as high as 20 percent. PTSD prevalence in this profession is comparable to law enforcement. Firefighters conduct paramedic activities and are the first responders to natural disasters. Firefighting is a dangerous profession that exposes workers to stressful conditions and traumatic events, ranging from threats to their safety and experiencing the devastating effects of catastrophes. As a result, the prevalence of PTSD in this group can be as high as 20 percent. Volunteer firefighters may have even higher rates because they don't have access to the same level of support as career firefighters. Healthcare workers, especially those working in emergency rooms and intensive care units, are also at higher risk. For example, nurses working in critical care units are more likely to develop PTSD than nurses in other groups. In addition, while senior-level nurses report fewer PTSD symptoms than junior ones, they report higher rates of burnout. Finally, healthcare workers exposed to patients that have experienced violence, such as an assault victim, are more likely to develop PTSD than surgeons who treat assault victims. Rescue workers, medical workers, and volunteers who act as first responders during disasters witness the aftermath of horrific events and can even become involved in severe traumatic events. The prevalence of PTSD in these individuals has been estimated to be between 15 and 30 percent. Journalists who work as war correspondents are at higher risk of being injured, killed, or kidnapped. Their lifetime prevalence of PTSD, which can be as high as 30 percent, reflects their lack of access to support and PTSD treatment options. Transit and train operators are frequently exposed to physical threats and witness suicide incidents such as "person under train" events. Exposure to these traumatic and threatening circumstances can be a daily or weekly occurrence. Bus drivers are more prone to PTSD because they have more direct contact with the general public than train drivers locked in secure train cabs. In these high-risk professions, the incidence of trauma declines when policies

are in place to debrief victims, give victims immediate access to counseling, and screen for individuals at high risk of having adverse reactions to traumatic conditions. The second edition of a bestseller, *Hazardous Materials Chemistry for Emergency Responders* continues to provide the fundamentals of "street chemistry" required by emergency response personnel. One woman's incredible story of life on the front lines as an emergency medical worker in New York City. On the streets of New York City, EMTs and paramedics do more than respond to emergencies; they eat and drink together, look out for each other's safety, mercilessly make fun of one another, date one other, and, most crucially, share terrifying experiences and grave injustices suffered under the city's long-broken

EMS system. Their loyalty to one another is fierce and absolute. As Jennifer Murphy shows in the gripping and moving *First Responder*, they are a family. A dysfunctional family, perhaps, but what family isn't? Many in the field of pre-hospital emergency care have endured medical trauma and familial hardship themselves. Some are looking to give back. Some are desperate for family. Some were inspired by 9/11. Still others want to become doctors, nurses, firefighters, cops, and want to cut their teeth on the streets. As rescuers, they never want people to die or get hurt. But if they are going to die or get hurt, first responders want to be there. Despite the vital role they play New York City, EMTs are paid less than trash collectors, and far less than any other first responder makes, even though the burden of medical emergencies fall on the backs of EMTs and medics. Yet for Jennifer and her brothers and sisters, it's a calling more than a job. First responders are constantly exposed to infectious diseases, violence, and death. The coronavirus pandemic did not change that math; the public is just more aware of it. After 9/11, EMT training schools experienced a surge in applications from civilians wanting to become first responders, inspired by rescuers who responded to the terrorist attacks and rushed into the burning towers when everyone else ran out. The same will almost certainly be true post-coronavirus as people are moved by a desire to help in times of crisis in a more direct way. Funny and heartwarming, inspiring and poignant, *First Responder* follows Jennifer's journey to becoming an EMT and working during and beyond the Covid-19 pandemic. She will bring readers inside an intense world filled with crisis, rescue, grief, uncertainty, and dark humor. *First Responder* will move readers to a greater understanding and appreciation of those fighting for them—wherever they live—in a world they hardly know or could imagine. Does the identification number 60 indicate a toxic substance or a flammable solid, in the molten state at an elevated temperature? Does the identification number 1035 indicate ethane or butane? What is the difference between natural gas transmission pipelines and natural gas distribution pipelines? If you came upon an overturned truck on the highway that was leaking, would you be able to identify if it was hazardous and know what steps to take? Questions like these and more are answered in the *Emergency Response Guidebook*. Learn how to identify symbols for and vehicles carrying toxic, flammable, explosive, radioactive, or otherwise harmful substances and how to respond once an incident involving those substances has been identified. Always be prepared in situations that are unfamiliar and dangerous and know how to rectify them. Keeping this guide around at all times will ensure that, if you were to come upon a transportation situation involving hazardous substances or dangerous goods, you will be able to help keep others and yourself out of danger. With color-coded pages for quick and easy reference, this is the official manual used by first responders in the United States and Canada for transportation incidents involving dangerous goods or hazardous materials. *Emergency Medical Responder: A Skills Approach* is the essential guide for students preparing to enter the paramedic profession. Thoroughly Canadian, it incorporates case studies drawn

from the authors' experience, as well as perspectives, legislation, and procedures that are particular to Canada. A variety of enrichment materials are included throughout the book, as is coverage on working with other members of the health care team and the importance of written reports and accurate documentation. The fourth Canadian edition features updated CPR standards reflecting the fundamental shift from 'A-B-C' to 'C'-A-B', review questions, and many new visuals. As well, the authors have worked significantly on expanding the discussions in relevant chapters concerning EMR and bariatric patients, lifting and positioning techniques including the HAINES position, and increased coverage of alternate methods of stabilizing an impaled object, as well as many other features. Their dedication to creating a current and thorough textbook is clearly reflected in the fact that this text has been a student favourite for more than a decade. Based on the new National EMS Education Standards and endorsed by the American Academy of Orthopaedic Surgeons, the Fifth Edition of our core first responder textbook offers complete coverage of every competency statement with clarity and precision in a concise format that ensures student comprehension and encourages critical thinking. The experienced author team and the AAOS medical editors have transformed the Education Standards into a training program that reflects best practices in prehospital medicine. Current, state of the art medical content has been incorporated along with new cognitive and didactic material, and skills and features, to create a robust and innovative training solution for your course that will engage student's minds.
