Streaming and Copyright Law Lasantha Ariyaratna,2022-09-05 This book examines the challenges posed to Australian copyright law by streaming from the end user perspective It compares the Australian position with the European Union and United States to draw lessons from them regarding how they have dealt with streaming and copyright By critically examining the technological functionality of streaming and the failure of copyright enforcement against the masses it argues for strengthening end user rights The rising popularity of streaming has resulted in a revolutionary change to how digital content such as sound recordings cinematographic films and radio and television broadcasts is used on the internet Superseding the conventional method of downloading using streaming to access digital content has challenged copyright law because it is not clear whether end user acts of streaming constitute copyright infringement These prevailing grey areas between copyright and streaming often make end users feel doubtful about accessing digital content through streaming It is uncertain whether exercising the right of reproduction is appropriately suited for streaming given the ambiguities of embodiment and scope of substantial part Conversely the fair dealing defence in Australia cannot be used aptly to defend end users acts of streaming digital content because end users who use streaming to access digital content can rarely rely on the defence of fair dealing for the purposes of criticism or review news reporting parody or satire or research or study When considering a temporary copy exception end users are at risk of being held liable for infringement when using streaming to access a website that contains infringing digital content even if they lack any knowledge about the content s infringing nature Moreover the grey areas in circumventing geo blocking have made end users hesitant to access websites through streaming because it is not clear whether technological protection measures apply to geo blocking End users have a severe lack of knowledge about whether they can use circumvention methods such as virtual private networks to access streaming websites without being held liable for copyright infringement Despite the intricacies between copyright and access to digital content the recently implemented website blocking laws have emboldened copyright owners while suppressing end users access to digital content This is because the principles of proportionality and public interest have been given less attention when determining website blocking injunctions

Big Data Executive Office of the President, 2014-10-29 Since the first censuses were taken and crop yields recorded in ancient times data collection and analysis have been essential to improving the functioning of society Foundational work in calculus probability theory and statistics in the 17th and 18th centuries provided an array of new tools used by scientists to more precisely predict the movements of the sun and stars and determine population wide rates of crime marriage and suicide These tools often led to stunning advances In the 1800s Dr John Snow used early modern data science to map cholera clusters in London By tracing to a contaminated public well a disease that was widely thought to be caused by miasmatic air Snow helped lay the foundation for the germ theory of disease Gleaning insights from data to boost economic activity also took hold in American industry Frederick Winslow Taylor s use of a stopwatch and a clipboard to analyze productivity at Midvale Steel Works in Pennsylvania increased output on the shop floor and fueled his belief that data science could revolutionize every aspect of life 2 In 1911 Taylor wrote The Principles of Scientific Management to answer President Theodore Roosevelt s call for increasing national efficiency Today data is more deeply woven into the fabric of our lives than ever before We aspire to use data to solve problems improve well being and generate economic prosperity The collection storage and analysis of data is on an upward and seemingly unbounded trajectory fueled by increases in processing power the cratering costs of computation and storage and the growing number of sensor technologies embedded in devices of all kinds In 2011 some estimated the amount of information created and replicated would surpass 1.8 zettabytes In 2013 estimates reached 4 zettabytes of data generated worldwide
