VEHICLE ALARM SYSTEM 'EUROSEC E50'
User Manual

'EUROSEC E50' is up-to-date vehicle alarm system designed for users looking for quality and appreciating their time. System generates secure variable code and functions in conformity to requirements of EU Directives. 'EUROSEC E50' is distinguished not only by the reliable engine immobilisation preventing vehicle theft but also by possibility of turning the alarm OFF by means of adjustable PIN code. This is extremely handy when facing remote control loss for example during some travel or when the remote control battery is low.

1. SYSTEM UNIT.

System unit performs main security functions, thus it is extremely important to hide it well in the passenger compartment of a vehicle. After the installation of the system unit all system settings and preprogramming of the new remote controls is done by using the PIN code. Manufacturer supplies alarm system with default 4-digit PIN code (Fig. 1) that can be found on the Identification label of alarm system (Fig. 2). Afterwards the user should change it into some other easy memorable 4-digit number. It is recommended to write down the new PIN code, however do not keep this information in your vehicle. In addition, do not use your birthday date or home address for the PIN code.

Fig. 1 The PIN code.

Fig. 2 The Identification label.

2. REMOTE CONTROL.

The system comes with 2 remote controls (radio transmitters) (Fig. 3 and Fig. 4) though it is possible to program up to 5 remote controls (see section 6.4.). It is recommended to replace remote control battery after every 12 months. All types of 23A batteries (12V) are eligible for use. Though remote control coding ensures protection of inside electronics from moisture, dipping of remote control device into water is not allowed under any circumstances.

3. ALARM ARMING USING REMOTE CONTROL BUTTON.

3.1. ALARM ARMING. Shortly press remote control button. Vehicle direction indicators flash once, system LED starts flashing in short bursts of light. Security alarm is turned ON. If vehicle incorporates central lock, the doors are locked.

3.2. ARMING WITH NO SENSOR. In case the system is connected with single-level sensor, press and hold button. Direction indicators will flash once, after 2 seconds direction indicators will shortly go on once more. Release the button. Protection is ON, however the sensor detecting vehicle body vibrations or movements inside the passenger compartment is deactivated and does not trigger the alarm system. Vehicle doors, luggage compartment and engine hood are secured. If the system is connected with two-level sensor and you want to turn on the security without triggering sensor warning signal, press and hold button. The direction indicators will flash once, after 2 seconds the direction indicators will go ON. Release the button. If you wish to turn the arming ON without a sensor - press and hold the button. Vehicle direction indicators flash once, after 2 seconds direction indicators will shortly go on once more. Release the button only with direction indicators in the off position.

3.3. ALARM INTERRUPT. System alarm starts generating noise (warning) in case of vehicle door, engine bonnet or luggage compartment opening, body movement or passenger compartment break-in when alarm is operational. Press remote control button to terminate alarming yet the security system remaining operational. If you want to turn OFF the response to vibrations or volume sensor till the next rearming, perform actions in section 3.2.

3.4. CLOSING WINDOWS AND SUNROOF ON ARMING. Installation of 'EUROSEC E50' enables system setting in a way the system generates a 40 second pulse designed for closing of windows and sunroof. In case of holding any of the buttons during impulse generation, the latter will be discontinued.

3.5. CENTRAL LOCK CONTROL WITH ENGINE OPERATIONAL. If doors of the vehicle are closed and the engine is ON, doors are locked with first press of button and unlocked with the second press. Very handy when travelling with children or heating vehicle.

3.6. AUTOMATIC DOOR LOCKING ON START UP OF THE ENGINE. The driver will definitely feel safer if the doors are locked automatically on the start of the engine. After turn OFF of the engine the doors are unlocked. To turn automatic door lock ON or OFF disarm the system or turn OFF the engine, simultaneously press and hold them till a short alarm signal.

3.7. CHECKING WHETHER THE SYSTEM IS ON. Press remote control button. If the system is armed, vehicle direction indicators flash once.

3.8. VEHICLE LOCATOR, PANIC AND EMERGENCY CALL FUNCTION. If the system is armed, press and hold remote control button. Direction indicators flash once, 1.5 seconds afterwards the siren starts sounding. The function can be used for locating your vehicle in a big parking lot, for warning nosy parkers, or attracting attention of by passers in case of emergency.

Mitchell,2015-08-27 This book constitutes the refereed proceedings of the 18th International Conference on Information Security ISC 2015 held in Trondheim Norway in September 2015 The 30 revised full papers presented were carefully reviewed and selected from 103 submissions The papers cover a wide range of topics in the area of cryptography and cryptanalysis and are organized in the following topical sections signatures system and software security block ciphers protocols network and cloud security encryption and fundamentals PUFs and implementation security and key generation biometrics and image security   **Detecting Peripheral-based Attacks on the Host Memory** Patrick Stewin,2014-12-27 This work addresses stealthy peripheral based attacks on host computers and presents a new approach to detecting them Peripherals can be regarded as separate systems that have a dedicated processor and dedicated runtime memory to handle

their tasks The book addresses the problem that peripherals generally communicate with the host via the host s main memory storing cryptographic keys passwords opened files and other sensitive data in the process an aspect attackers are quick to exploit Here stealthy malicious software based on isolated micro controllers is implemented to conduct an attack analysis the results of which provide the basis for developing a novel runtime detector The detector reveals stealthy peripheral based attacks on the host s main memory by exploiting certain hardware properties while a permanent and resource efficient measurement strategy ensures that the detector is also capable of detecting transient attacks which can otherwise succeed when the applied strategy only measures intermittently Attackers exploit this strategy by attacking the system in between two measurements and erasing all traces of the attack before the system is measured again __Essential PHP Security__ Chris Shiflett,2005-10-13 Being highly flexible in building dynamic database driven web applications makes the PHP programming language one of the most popular web development tools in use today It also works beautifully with other open source tools such as the MySQL database and the Apache web server However as more web sites are developed in PHP they become targets for malicious attackers and developers need to prepare for the attacks Security is an issue that demands attention given the growing frequency of attacks on web sites Essential PHP Security explains the most common types of attacks and how to write code that isn t susceptible to them By examining specific attacks and the techniques used to protect against them you will have a deeper understanding and appreciation of the safeguards you are about to learn in this book In the much needed and highly requested Essential PHP Security each chapter covers an aspect of a web application such as form processing database programming session management and authentication Chapters describe potential attacks with examples and then explain techniques to help you prevent those attacks Topics covered include Preventing cross site scripting XSS vulnerabilities Protecting against SQL injection attacks Complicating session hijacking attempts You are in good hands with author Chris Shiflett an internationally recognized expert in the field of PHP security Shiflett is also the founder and President of Brain Bulb a PHP consultancy that offers a variety of services to clients around the world *Types and Programming Languages* Benjamin C. Pierce,2002-01-04 A comprehensive introduction to type systems and programming languages A type system is a syntactic method for automatically checking the absence of certain erroneous behaviors by classifying program phrases according to the kinds of values they compute The study of type systems and of programming languages from a type theoretic perspective has important applications in software engineering language design high performance compilers and security This text provides a comprehensive introduction both to type systems in computer science and to the basic theory of programming languages The approach is pragmatic and operational each new concept is motivated by programming examples and the more theoretical sections are driven by the needs of implementations Each chapter is accompanied by numerous exercises and solutions as well as a running implementation available via the Web Dependencies between chapters are explicitly identified allowing readers to choose a variety of paths

through the material The core topics include the untyped lambda calculus simple type systems type reconstruction universal and existential polymorphism subtyping bounded quantification recursive types kinds and type operators Extended case studies develop a variety of approaches to modeling the features of object oriented languages   The Ghost of One's Self Paul Meehan,2017-09-19 For millennia people have held folk beliefs about the existence of the doppelganger double walker in German a look alike second self that is often the antithesis of one s identity and is usually considered an omen of misfortune or death The theme of the double has inspired works by E T A Hoffmann Poe de Maupassant Dostoevsky and others and has been the basis for many classic mystery horror and science fiction movies This critical survey examines the double in more than 100 films by such acclaimed directors as Alfred Hitchcock Mario Bava Roger Corman David Cronenberg George Romero Fritz Lang James Cameron Robert Siodmak Don Siegel John Frankenheimer Terry Gilliam Brian De Palma and Roman Polanski   Mergent Industrial Manual ,2003   *International Joint Conference SOCO'14-CISIS'14-ICEUTE'14* José Gaviria de la Puerta,Iván García Ferreira,Pablo Garcia Bringas,Fanny Klett,Ajith Abraham,André C.P.L.F. de Carvalho,Álvaro Herrero,Bruno Baruque,Héctor Quintián,Emilio Corchado,2014-06-07 This volume of Advances in Intelligent and Soft Computing contains accepted papers presented at SOCO 2014 CISIS 2014 and ICEUTE 2014 all conferences held in the beautiful and historic city of Bilbao Spain in June 2014 Soft computing represents a collection or set of computational techniques in machine learning computer science and some engineering disciplines which investigate simulate and analyze very complex issues and phenomena After a through peer review process the 9th SOCO 2014 International Program Committee selected 31 papers which are published in these conference proceedings In this relevant edition a special emphasis was put on the organization of special sessions One special session was organized related to relevant topics as Soft Computing Methods in Manufacturing and Management Systems The aim of the 7th CISIS 2014 conference is to offer a meeting opportunity for academic and industry related researchers belonging to the various vast communities of Computational Intelligence Information Security and Data Mining The need for intelligent flexible behaviour by large complex systems especially in mission critical domains is intended to be the catalyst and the aggregation stimulus for the overall event After a through peer review process the CISIS 2014 International Program Committee selected 23 papers and the 5th ICEUTE 2014 International Program Committee selected 2 papers which are published in these conference proceedings as well   **Detection of Intrusions and Malware, and Vulnerability Assessment** Michalis Polychronakis,Michael Meier,2017-06-27 This book constitutes the refereed proceedings of the 14th International Conference on Detection of Intrusions and Malware and Vulnerability Assessment DIMVA 2017 held in Bonn Germany in July 2017 The 18 revised full papers included in this book were carefully reviewed and selected from 67 submissions They present topics such as enclaves and isolation malware analysis cyber physical systems detection and protection code analysis and web security   **Ccs '17** Bhavani Thuraisingham,2017-10-30 CCS 17 2017 ACM SIGSAC Conference on Computer and
