Assessment of Climate Change over the Indian Region R. Krishnan,J. Sanjay,Chellappan Gnanaseelan,Milind Mujumdar,Ashwini Kulkarni,Supriyo

Chakraborty,2020-06-12 This open access book discusses the impact of human induced global climate change on the regional climate and monsoons of the Indian subcontinent adjoining Indian Ocean and the Himalayas It documents the regional climate change projections based on the climate models used in the IPCC Fifth Assessment Report AR5 and climate change modeling studies using the IITM Earth System Model ESM and CORDEX South Asia datasets The IPCC assessment reports published every 6 7 years constitute important reference materials for major policy decisions on climate change adaptation and mitigation While the IPCC assessment reports largely provide a global perspective on climate change the focus on regional climate change aspects is considerably limited The effects of climate change over the Indian subcontinent involve complex physical processes on different space and time scales especially given that the mean climate of this region is generally shaped by the Indian monsoon and the unique high elevation geographical features such as the Himalayas the Western Ghats the Tibetan Plateau and the adjoining Indian Ocean Arabian Sea and Bay of Bengal This book also presents policy relevant information based on robust scientific analysis and assessments of the observed and projected future climate change over the Indian region

Kinematics of Machinery Anup Goel, 2021-01-01. Kinematics of Machinery is the branch of engineering science which deals with the study of relative motion between the various parts of a machine and the forces which act on them. It gives information about the basic concepts and layout of linkages in the assembly of a system or a machine. The subject provides information about the principles in analysing the assembly with respect to the displacement, velocity, and acceleration at any point in a link of a mechanism. This book gives technique to find velocity and acceleration of different mechanisms by graphical and analytical methods. It also includes the basic concepts of toothed gearing and kinematics of gear trains and the effect of friction in motion transmission and in machine components. My hope is that this book through its careful explanations of concepts, practical examples, and figures bridges the gap between knowledge and proper application of that knowledge.

Biological Diversity: Current Status and Conservation Policies Vinod Kumar, Sunil Kumar, Nitin Kamboj, Temin Payum, Pankaj Kumar, Sonika Kumari, 2021-10-25. The present book has been designed to bind prime knowledge of climate change-induced impacts on various aspects of our environment and its biological diversity. The book also contains updated information, methods, and tools for the monitoring and conservation of impacted biological diversity.
