World Development Report 2018 World Bank Group, 2017-10-16 Every year the World Bank's World Development Report WDR features a topic of central importance to global development The 2018 WDR LEARNING to Realize Education's Promise is the first ever devoted entirely to education And the time is right education has long been critical to human welfare but it is even more so in a time of rapid economic and social change The best way to equip children and youth for the future is to make their learning the center of all efforts to promote education The 2018 WDR explores four main themes First education's promise education is a powerful instrument for eradicating poverty and promoting shared prosperity but fulfilling its potential requires better policies both within and outside the education system Second the need to shine a light on learning despite gains in access to education recent learning assessments reveal that many young people around the world especially

those who are poor or marginalized are leaving school unequipped with even the foundational skills they need for life At the same time internationally comparable learning assessments show that skills in many middle income countries lag far behind what those countries aspire to And too often these shortcomings are hidden so as a first step to tackling this learning crisis it is essential to shine a light on it by assessing student learning better Third how to make schools work for all learners research on areas such as brain science pedagogical innovations and school management has identified interventions that promote learning by ensuring that learners are prepared teachers are both skilled and motivated and other inputs support the teacher learner relationship Fourth how to make systems work for learning achieving learning throughout an education system requires more than just scaling up effective interventions Countries must also overcome technical and political barriers by deploying salient metrics for mobilizing actors and tracking progress building coalitions for learning and taking an adaptive approach to reform

Knowledge Production and Contradictory Functions in African Higher Education Nico Cloete, Peter Maassen, 2015-03-01 The dominant global discourse in higher education now focuses on world class universities inevitably located predominantly in North America Europe and increasingly East Asia The rest of the world including Africa is left to play catch up But that discourse should focus rather on the tensions even contradictions between excellence and engagement with which all universities must grapple Here the African experience has much to offer the high participation and generously resourced systems of the so called developed world This book offers a critical review of that experience and so makes a major contribution to our understanding of higher education

Competency Based Education And Training John Burke, 2005-10-18 First published in 1989 Routledge is an imprint of Taylor Francis an informa company

Tuning and Harmonisation of Higher Education, 2014

Repositioning Higher Education Frank Coffield, Bill Williamson, 1997-01-01 The writers in this book envisage a system of higher education fit for the new millennium They challenge the fatalism of much current thinking about mass higher education and identify the ways universities must take the initiative in defining radically different models of their futures They look to universities which are accessible accountable and growing steadily with adequate resources They envisage institutions which promote democratic values offer high quality lifelong learning opportunities and are based on a new contract with and vision for the society they serve

Repositioning Higher Education develops a powerful critique of current orthodoxies in higher education and will provoke further open debate about the role of higher education in modern society
