Talk to creative problem-solvers and they will often tell you, the key to their success is asking a different question. Take Debbie Sterling, the social entrepreneur who created GoldieBlox. The idea came when a friend complained about too few women in engineering and Sterling wondered aloud: "why are all the great building toys made for boys?" Or consider Nobel laureate Richard Thaler, who asked: "would it change economic theory if we stopped pretending people were rational?" Or listen to Jeff Bezos whose relentless approach to problem solving has fueled Amazon's exponential growth: "Getting the right question is key to getting the right answer." Great questions like these have a catalytic quality—that is, they dissolve barriers to creative thinking and channel the pursuit of solutions into new, accelerated pathways. Often, the moment they are voiced, they have the paradoxical effect of being utterly surprising yet instantly obvious. For innovation and leadership guru Hal Gregersen, the power of questions has always been clear—but it took some years for the follow-on question to hit him: If so much depends on fresh questions, shouldn't we know more about how to arrive at them? That sent him on a research quest ultimately including over two hundred interviews with creative thinkers. Questions Are the Answer delivers the insights Gregersen gained about the conditions that give rise to catalytic questions—and breakthrough insights—and how anyone can create them. Have you ever been fired? What is your management style? and many more . . . Skills and Competencies questions (What can you do?): Describe a challenging work issue you had to face. How do you handle an angry employee? and many more . . . Personality/Goals questions (Who are you?): What makes you a good team member? Job Fit questions (Are you a match?): How would you describe your ideal work environment? What aspects of the job will you like least? and many more . . . Torture/Trick questions (Can you take the heat?): Why should we hire you for this position? What do you expect your starting salary to be? How do I rate as an interviewer? . . . The reverse side of each card tells why the question is asked, presents sample responses, and allows space to customize an answer. About The Author Zack Austin has been building large scale enterprise systems for clients in the media, telecom, financial services and publishing since 2001. He is based in New York City. An inquiry made to obtain any information is known as an interrogation. While asking the person tries to get an answer that allows him to satisfy his doubts. The interviewers often ask simple questions in a very twisted fashion to confuse the candidates. Difficult questions-answers reflect the knowledge of the giver as well as his overall personality. For example: 'Which is heavier: a kilogram of feathers or 1000 grams of lead?' (Solution: Both the weights are equal). And 'What happened in Kolkata yesterday from 8 to 9 o'clock?' (Solution: An hour had passed).' These questions have a trick because they are framed in such a way that the answers seem simple, but in reality, they are not. It can be said that the questioners confuse the candidates as they hide their answers using rhetorical resources and various devices. In some cases, the answer is found in the question itself, but in secret. Tricky questions are also used for fun or as a mental activity of logical practice. Like a truck driver passing down a street in the wrong direction, some policemen saw him, but they didn't say anything to him, why? (Solution: Because the truck driver was on foot). He shaves all day but still has a beard, who is he? (Solution: Barber). Some months have thirty days and others thirty-one, but how many months have twenty-eight? (Solution: Every month has at least twenty-eight days). Which object becomes wet When it dries? (Solution: Towel) How do you draw a square with three lines? (Solution: draw the square first and then draw three lines inside the square). Thus, an answer to a tricky question can lead to confusion due to the confusion-generated question. These types of questions are very specific to the areas in which people's knowledge or behavior is evaluated. Generally, such difficult questions can be perceived as misleading or incorrect because something is being implied that is not in reality. However, they can also be seen as methods whose precise purpose is to test the candidate and determine whether he or she is fully capable of answering the question that he or she is saying. I know. In this way, about five thousand questions and answers have been given in the present book, which is equally useful for all competitive examinations.
