Gary Sernovitz leads a double life. A typical New York liberal, he is also an oilman - a fact his left-leaning friends let slide until the word "fracking" entered popular parlance. "How can you frack?" they suddenly demanded, aghast. But for Sernovitz, the real question is, "What happens if we don't?" Fracking has become a four-letter word to environmentalists. But most people don't know what it means. In his

fast-paced, funny, and lively book, Sernovitz explains the reality of fracking: what it is, how it can be made safer, and how the oil business works. He also tells the bigger story. Fracking was just one part of a shale revolution that shocked our assumptions about fueling America's future. The revolution has transformed the world with consequences for the oil industry, investors, environmentalists, political leaders, and anyone who lives in areas shaped by the shales, uses fossil fuels, or cares about the climate - in short, everyone. Thanks to American engineers' oilfield innovations, the United States is leading the world in reducing carbon emissions, has sparked a potential manufacturing renaissance, and may soon eliminate its dependence on foreign energy. Once again the largest oil and gas producer in the world, America has altered its balance of power with Russia and the Middle East. Yet the shale revolution has also caused local disruptions and pollution. It has prolonged the world's use of fossil fuels. Is there any way to reconcile the costs with the benefits of fracking? To do so, we must start by understanding fracking and the shale revolution in their totality. The Green and the Black bridges the gap in America's energy

education. With an insider's firsthand knowledge and unprecedented clarity, Sernovitz introduces readers to the shales - a history-upturning "Internet of oil" - tells the stories of the shale revolution's essential characters, and addresses all the central controversies. To capture the economic, political, and environmental prizes, we need to adopt a balanced, informed perspective. We need to take the green with the black. Where we go from there is up to us. Nightshift clerk and high-functioning insomniac Jack is back to work, trying his best to keep out of trouble. But when his chain-smoking coworker discovers a mysterious radio signal revealing the guarded secrets of their town, Jack will learn that an annoying new dayshift manager is far from the worst of his problems. In this second installment of the Gas Station saga, Jack finds himself entangled in his most harrowing adventure yet. With the newest crew of coworkers along for the ride and the resident psychopath out for his blood, our hero(?) must navigate the drama of small-town murder conspiracies, vigilante justice, and demonic summoning rituals...whether he wants to or not. Books on how to improve gas mileage for cars are everywhere. But here is one that you will always keep, for it is not a

cut and dry listing of do's and don'ts that is merely a rehash of what is common knowledge. The author is a certified car nut who is totally into things automotive and he can get carried away when it comes to squeezing the last ounce of go-power out of a gallon of gas, and so his book goes beyond just the theoretical. All the fun of a road-trip is here. The cruise night, with all the cars pictured are illustrated free hand by him to add to the rollicking fun. And the show-and-tell covering the things he has done to his Corolla to make it go the distance like a Prius alone will get you excited. His little microcar, a 1958 Berkeley, gets over 60 miles per gallon. It has got him excited about getting the word out that small cars can be big in that they can free us from having to depend on foreign oil. With today's technologies they can make them better, stronger and more durable. Until we can ride around in the new generation of gas-sipping microcars, we will have to do what we can to make every gallon of gas go as far as possible. This book will show you how. Let all the pain Big Oil is causing you to dissipate into the desert dust, as you pack up and go on this imaginary road-trip. And you can leave your gas can at home. Thirteen-year-old Evan Hanson is always the last in her family to know what's going on—at least, that's how it feels. Her father, Gene, who's been meaner since he began serving in Vietnam, isn't around much, and she likes it better that way. But then her brother, Adam, gets drafted and her anti-war mother, Endura, takes him across the border to Canada, leaving Evan alone with Gene and her younger, special needs brother, Teddy. When he realizes Endura isn't returning, Gene takes Evan and Teddy to Eat and Get Gas, his mother's café and gas station in Hoquiam, Washington. There, as well as her no-nonsense but loving grandma, Evan encounters Aunt Vivian, a teasing but caring

know-it-all; Uncle Frankie, injured in Vietnam and suffering from PTSD; Paco, the draft dodger Frankie is hiding; Hal and Hubert, the strange but gentle next-door neighbors who play the piano like virtuosos and help out when they're needed; and Louanne, Frankie's reserved, sensitive sister. She is drawn in particular to Louanne, who was disfigured by a car accident that killed the rest of her and Frankie's family. At Eat and Get Gas, Evan finds a new freedom, and she starts to carve out a place for herself by helping in the café and sorting mail for Uncle Frankie, who runs a postal route in addition to running the gas station. She eventually, too, learns some of the family secrets she's been kept in the dark about—and comes to understand that her mother isn't coming back any time soon. Then, after reading a letter that wasn't meant for her, Evan discovers the biggest secret of all. With rising fuel costs and the ever-present danger of interruption in the world's petroleum supplies, conserving petrol now is in every driver's interest. This new edition explores techniques for improving petrol mileage by as much as 100 percent. Sikorsky shows what you can do behind the wheel to conserve petrol, explaining the driving and parking techniques the Shell Oil Company

Mileage Marathon test group used to coax a car to go almost 400 miles on a single gallon of petrol. New to this edition is coverage of recent fuel-conserving automotive equipment, fuel additives, engine treatments, lubricants, maintenance procedures, and on-board computers that can help save energy. With this book at their disposal, drivers can not only save money for themselves, but also help cut pollution. Are you fed up with high gas prices? Frustrated by our nation's continued dependence on imported oil? Here, in easy-to-read, nontechnical language, Bob Sikorsky reveals his secrets of high-mileage green driving, with hundreds of ways you can: Dramatically increase everyday fuel economy Double or triple your gas mileage in an emergency Save money, increase vehicle life, become a safer driver Reduce pollution and ease global warming Fight terrorism by cutting our dependence on Mideastern oil We don't have to wait for years for Detroit or Tokyo to solve our energy problems we can turn our vehicles into high-mileage, low-emissions machines NOW, the very next time we drive. The world is currently consuming about 85 million barrels of oil a day, and about two-thirds as much natural gas equivalent, both derived from non-renewable

natural sources. In the foreseeable future, our energy needs will come from any available alternate source. Methanol is one such viable alternative, and also offers a convenient solution for efficient energy storage on a large scale. In this updated and enlarged edition, renowned chemists discuss in a clear and readily accessible manner the pros and cons of humankind's current main energy sources, while providing new ways to overcome obstacles. Following an introduction, the authors look at the interrelationship of fuels and energy, and at the extent of our non-renewable fossil fuels. They also discuss the hydrogen economy and its significant shortcomings. The main focus is on the conversion of CO₂ from industrial as well as natural sources into liquid methanol and related DME, a diesel fuel substitute that can replace LNG and LPG. The book is rounded off with an optimistic look at future possibilities. A forward-looking and inspiring work that vividly illustrates potential solutions to our energy and environmental problems. It is difficult to find an area of public policy more plagued by misunderstanding than energy policy. Even worse, every time the subject is raised, we are obligated to get mired in pointless arguments about the weather. This

book helps set the record straight. Not convinced? Consider some of these inconvenient truths: The cost of green energy climate remediation is anywhere from 10-to-1,000 times greater than the damage from the climate change it attempts to alleviate. Germany, the worlds leader in solar energy, will spend more than \$280 billion by 2030 on solar subsidies. But all of that investment will only forestall 22nd century global warming by 37 hours. Obamas carbon tax would cost Americans \$1.2 trillion over just ten years. But it would only reduce the midrange 3 degree modeled 22nd century global temperature increase by 0.038 degrees Celsius. At their current emissions growth rate, it will take China nine months to replace the entire U.S. emissions cut that Obama wants to achieve over seven years, at a staggering cost in American jobs and lost economic growth. The U.S. biofuel program imposes a cost on consumers 9,862 times greater than any climate benefit they or their distant progeny will ever derive. This is not another skeptical global warming polemic but an economic evaluation of how and why green energy will fail. The world has too many pressing needs. For the money Obama squandered on just a single bankrupt crony

solar company, the U.S. could have prevented 300,000 childhood malaria deaths in poor countries. A thoroughly researched, heavily documented book by an expert in his field, it will demonstrate in meticulous detail how wasteful and economically inefficient Obamas green energy dead end future will be compared to other worthy alternatives. Its time to end the hysterical climate cynicism and get on humanity's side. Looking for a practical present to give a car enthusiast or that special someone who takes the best care of their car? Gas Money is a heartwarming, honest narrative that shows how the everyday people we come in contact with can shape our lives forever. Packed with much humor, lots of inspiration and occasional sadness, the collection of true stories captures the perspective and imagination of a six-year-old black boy growing up in 1960s Virginia and his soul-searching journey over the next five decades. There are plenty of products on the market for consumers to choose from. Most of the time they evolve based on the needs of society. When there is a trend taking place then you will see many different products emerge that can meet the new need people have. Some of them have been around for many years but people just don't notice them. They aren't recognized until there is a significant need for them. Older products may change how they advertise and even change the name of the product in order to get a facelift in the public eye. It is no secret to anyone that gas prices have continued to rise to unbelievable prices

over the past couple of years. While there has been a steady increase all along, nothing has taken place like it has in the past six months. It seems like the prices at the pumps are increasing every couple of days. That has many consumers scared to death and scrambling for a solution. They aren't making more money but continue have more expenses to cover. The more you drive your vehicle the more you are affected by these increasing fuel prices. It can be a very scary time if you already have a thin budget to work with. It may only be by a few cents but that quickly adds up to too much per gallon. The fact that the prices tend to go up every week isn't helping. In the end you are likely paying more money when you fill up than ever before. This has also led to an increase in the cost of everything else. That is because it is taking more money for suppliers to get it delivered. All of that price increase is being passed on to the consumer. Trucking companies have to pay more for fuel to get supplies to lumber yards, groceries and supplies to stores, and even to transport fuel to the gas stations. They can't stay in business if they don't increase what they charge for such deliveries. As a result the places they are delivering materials to have to

increase what they charge in order to make a profit. This is a continuous cycle with the final consumer getting the short end of the stick. This has resulted in people traveling less and buying fewer items that aren't essential. With very little chance that gas prices are going to drop, people are looking for alternatives. That is why business entrepreneurs are offering a variety of gas saving devices. The controversy though is that some people believe they work while others are convinced they are nothing more than a scam. There are hundreds of such products out there available and that is appealing to consumers. They are tired of paying high amounts for gas and they are willing to do all they can in order to find a way out of it. Advertisers of such products know this and they continue to appeal to the emotions of these consumers in order to sell more of their products. Before you buy one of them you need to do your homework. You need to find out what other consumers have to say about it. You definitely don't want to waste your time or money on something that isn't going to be effective. There is no reason to hand over the cash until you know you are getting a legitimate product with a high level of credibility behind it. The Federal Trade Commission has issued several warnings

about the use of gas saving devices. Therefore it is very important for you to be sure you know what you are paying for. If it sounds too good to be true than more than likely it is. Don't find out after you have paid for the product. The Federal Trade Commission has tested more than 100 products on the market that claim a person can save 20% or more on their gas expenses. However, this agency wasn't able to verify any of these products could offer those results or any significant benefit at all. You may be familiar with particular fuel saving products that have been advertised. They all fall into particular categories depending on how you use them and what methods they incorporate. Keep reading to find out reliable information on each of these categories. If you are looking for a present to give to a car enthusiast or to someone who just takes the best care of their car, this log book is a perfect tool to help you keep track of your mileage and expenses. It is neat and well organized, which makes a great gift for anyone not only to record daily mileage for work, but also to keep track of vehicle information. It can be used for tax deduction purposes or simply to keep track of gas mileage and expenses. Keeping a great record to makes your car easier to sell. My

Toyota Echo is rated at 36mpg for the average driver. I can get 43mpg. Some people only get 25mpg in their Echo. Techniques for getting better gas mileage are called hypermiling. In this book, I discuss 13 hypermiling techniques. I also discuss how to calculate gas mileage so you can tell how your mileage is improving as you apply some or all of these techniques. Just think, now you'll have a few extra bucks to buy a lottery ticket, a flower for a special friend, a soda or a stick of gum for yourself, or a bottle of bubbles for your kid. Perhaps you'll save it to tip your favorite wait person a little extra. You might even stick it in your bank account to help pay bills. Rating G; Reading Level Easy 6th Grade; Longest Word: Compassionate If you aren't familiar with hypermiling you should look into what it is all about. Chances are you will be hearing that term floating around quite a bit. It is a way for you to be able to cut back on the amount of fuel you consume. Since most of us rely upon our vehicle to get us around we need to make it go further with less fuel being consumed. You may be thinking that you are already doing all you can to cut costs. You are watching the prices at the pumps and you are cutting back on when and where you drive. You may be frustrated about all of it as

well. This is because it simply isn't always possible to cut down on the amount that you use your vehicle. You can't change how far it is to your place of employment due to gas prices. Getting another job closer may not be possible. At the same time you may really like the job you have. There is also the pay to consider as a new job may start you out at less than you make right now. With the economy being as low as it is right now, the job market is difficult as well. It is understandable that you may be worried about a lay off or not being needed at a particular job site. If you have been at one place for a while there is some job security in that. You also have your other commitments such as getting kids to school, grocery shopping, and running errands. While you can arrange things to flow better you still won't be able to completely cut these needs out of your schedule. It just isn't realistic to expect anyone to blow off all of the other things going on in their life because they can't pay for the high cost of fuel. If you still want to be able to enjoy those things then pay attention to the various hypermiling methods. They can really help you even if you aren't sure at this time. Gas is going to be consumed no matter where you go and what you do. If you take

your vehicle there it will be an additional expense to consider. Carpooling isn't always a practical solution either when you have so many things going on. People tend to overextend themselves so having your own car is often necessary in order to be able to successfully get it all done. If you have a work schedule that varies it is even harder to carpool. Try to do it if possible though even a couple of days per week. With the outlook for the economy being quite grim right now, consumers are at the mercy of oil prices when the approach the pumps. Since the government isn't able to offer us the relief we need it is up to each of us to do something. You can sit around and complain about how much you pay per gallon for gas or you can be more efficient. The government has made some efforts though by offering information about hypermiling on various websites. It is a good idea to take a look at that information so you can see for yourself that it is substantial material. In many ways this is a service the government is offering to help the average person be able to get by in light of the increases in prices. Once you finish reading this you will have plenty of information about hypermiling. You will be able to implement a strategy that works so you can get the most

out of it. This way you can make your car go further with less gas. That means more money in your pocket instead of being placed in order for you to get around. You should be able to start implementing many of them in very little time at all. Make sure you review the list of hypermiling strategies on a regular basis though. If you aren't effectively practicing certain ones you may end up forgetting about them. Should that happen you won't be able to get as much savings as you could.
