How green is green? The average homeowner is usually well-informed about which products and concepts are considered "green," but they seem to have less of an understanding of how they compare, and which things work the best for the lowest investment. Did you know that 40 percent of the average home power bill is dedicated to air conditioning in warm climates? Further, energy is spent on cooking, hot water, clothes dryers, and such. Did you know that solar hydronic panels are way more efficient than solar voltaic panels? How about instantaneous water heaters? Are they good? Homeowners need to make dozens of decisions about which

products or services they need in order to make their home the most efficient it can be for the given budget. Do you have mold or humidity problems? If you want to learn about things like the home envelope, HVAC, hot water, and electrical systems, this book is for you. It is written in plain English, and covers all the bases. Also, given are tips on saving the environment from an engineer's perspective. The author is a big fan of the environment, but does not like "greenwashing." The generic definition of greenwashing is the practice of making an unsubstantiated or misleading claim about the environmental benefits of a product, service, or technology. Pros and cons of various "green" products are discussed so that the homeowner can understand the smartest purchases and practices. One of the things you will learn is that the envelope of the home is just as important as the HVAC. You have to understand both to be successful. The envelope is thoroughly discussed as well as HVAC, plumbing, electrical, and the various green technologies. Variation in Datives collects new research on the nature of syntactic micro-variation in datives. The papers in this volume examine different aspects of

internal variation in dative marking, such as agreement and case alternations, distribution of adpositional structures and dative case-marking, the different structural positions of dative arguments and their semantic contribution, and patterns of syncretism in the clitic and/or agreement system. Interest in these topics has grown significantly in the past 20 years.

Variation in Datives makes a significant contribution to our understanding of language variation, as it adds the micro-comparative perspective to the general discussion and includes 10 new articles on a wide range of European languages, including Greek, Basque, Icelandic, and Serbo-Croatian. *Variation in Datives* will appeal to scholars and advanced students of syntax, linguistic variation, and especially syntactic micro-variation. Finally a homeowner's manual for everyone. Newly revised and updated to include information on energy efficiency? saving money, saving energy and maintaining your home. Finally, a homeowner's manual for everyone. Just as a new vehicle comes with an Owner's Manual, now your house can too. The Small Business Owner's Manual is great for those starting a business, operators of existing enterprises, or as a gift. This book contains peer-reviewed papers presented at the 10th International Conference on Energy Efficiency in Domestic Appliances and Lighting (EEDAL'19), held in Jinan, China from 6-8 November 2019. Energy efficiency helps to mitigate CO2 emissions and at the same time increases the security of energy supply. Energy efficiency is recognized as the cleanest, quickest and cheapest energy source. Not only this, but energy efficiency brings several additional benefits for society and end-users, such as lower energy costs, reduced local pollution, better outdoor and indoor air quality, etc. However, in some sectors, such as the residential sector, barriers to investments

in energy efficiency remain. Legislation adopted in several jurisdictions (EU, Japan, USA, China, India, Australia, Brazil, etc.) helps in removing barriers and fosters investments in energy efficiency. These initiatives complement innovative financing schemes for energy efficiency, the provision of energy services by energy service companies and different types of information programs. At the same time, progress in appliance technologies and in solid state lighting offer high levels of efficiency. LED lighting is an example. As with previous conferences in this series, EEDAL'19 provided a unique forum to discuss and debate the latest developments in energy and environmental impact of households, including appliances, lighting, heating and cooling equipment, electronics, smart meters, consumer behavior, and policies and programs. EEDAL addressed non-technical issues such as consumer behavior, energy access in developing countries, and demand response. Get it right the first time!
