identifies three dimensions that convey the core ideas and practices around which science and engineering education in these grades should be built. These three dimensions are crosscutting concepts that unify the study of science through their common application across science and engineering: scientific and engineering practices and disciplinary core ideas in the physical sciences, life sciences, and earth and space sciences, and for engineering: technology and the applications of science. The overarching goal is for all high school graduates to have sufficient knowledge of science and engineering to engage in public discussions on science-related issues, be careful consumers of scientific and technical information, and enter the careers of their choice.

A Framework for K-12 Science Education is the first step in a process that can inform state-level decisions and achieve a research-grounded basis for improving science instruction and learning across the country. The book will guide standards developers, teachers, curriculum designers, assessment developers, state and district science administrators, and educators who teach science in informal environments.

Exploring Earth Science Julia Johnson, Stephen Reynolds, 2015-02-06

Exploring Earth Science by Reynolds Johnson is an innovative textbook intended for an introductory college geology course such as Earth Science. This groundbreaking, visually spectacular book was designed from cognitive and educational research on how students think, learn, and study. Nearly all information in the book is built around 2,600 photographs and stunning illustrations rather than being in long blocks of text that are not articulated with figures. These annotated illustrations help students visualize geologic processes and concepts and are suited to the way most instructors already teach. To alleviate cognitive load and help students focus on one important geologic process or concept at a time, the book consists entirely of two-page spreads organized into 20 chapters. Each two-page spread is a self-contained block of information about a specific topic, emphasizing geologic concepts, processes, features, and approaches. These spreads help students learn and organize geologic knowledge in a new

and exciting way Inquiry is embedded throughout the book modeling how scientists investigate problems The title of each two page spread and topic heading is a question intended to get readers to think about the topic and become interested and motivated to explore the two page spread for answers Each chapter is a learning cycle which begins with a visually engaging two page spread about a compelling geologic issue Each chapter ends with an Investigation that challenges students with a problem associated with a virtual place The world class media spectacular presentations and assessments are all tightly articulated with the textbook This book is designed to encourage students to observe interpret think critically and engage in authentic inquiry and is highly acclaimed by reviewers instructors and students
