Waiting for the Biblioburro Monica Brown, 2013-04-24 Ana loves stories. She often makes them up to help her little brother fall asleep. But in her small village, there are only a few books, and she has read them all. One morning, Ana wakes up to the clip-clop of hooves, and there before her is the most wonderful sight: a traveling library resting on the backs of two burros. All the books a little girl could dream of, with enough stories to encourage her to create one of her own. Inspired by the heroic efforts of real-life librarian Luis Soriano, award-winning picture book creators Monica Brown and John Parra introduce readers to the mobile library that journeys over mountains and through valleys to bring literacy and culture to rural Colombia and to the children who wait for the BiblioBurro. A portion of the proceeds from sales of this book was donated to Luis Soriano's BiblioBurro program.

Inside Out & Back Again Thanhha Lai, 2013-03-01 Moving to America turns H's life inside out. For all the 10 years of her life, H has only known Saigon: the thrills of its markets, the joy of its traditions, the warmth of her friends close by, and the beauty of her very own papaya tree. But now the Vietnam War has reached her home. H and her family are forced to flee as Saigon falls, and they board a ship headed toward hope. In America, H discovers the foreign world of Alabama: the coldness of its strangers, the dullness of its food, the strange shape of its landscape, and the strength of her very own family. This is the moving story of one girl's year of change, dreams, grief, and healing as she journeys from one country to another, one life to the next.

Mathematics for Machine Learning Marc Peter Deisenroth, A. Aldo Faisal, Cheng Soon Ong, 2020-04-23 The fundamental mathematical tools needed to understand machine learning include linear algebra, analytic geometry, matrix decompositions, vector calculus, optimization, probability, and statistics. These topics are traditionally taught in disparate

courses making it hard for data science or computer science students or professionals to efficiently learn the mathematics. This self-contained textbook bridges the gap between mathematical and machine learning texts, introducing the mathematical concepts with a minimum of prerequisites. It uses these concepts to derive four central machine learning methods: linear regression, principal component analysis, Gaussian mixture models, and support vector machines. For students and others with a mathematical background, these derivations provide a starting point to machine learning texts. For those learning the mathematics for the first time, the methods help build intuition and practical experience with applying mathematical concepts. Every chapter includes worked examples and exercises to test understanding. Programming tutorials are offered on the book's web site.

Classroom Discussions Suzanne H. Chapin, Mary Catherine O'Connor, Nancy Canavan Anderson, 2009. Based on a four-year research project funded by the U.S. Department of Education, this book is divided into four sections: Talk in the Mathematics Class (introducing five discussion strategies or moves that help teachers achieve their instructional goal of strengthening students' mathematical thinking and learning), What Do We Talk About? (implementing talk in the classroom), and Case Studies (public descriptions).
