Find the speed of a bike that travels 120 meters in 20 seconds.
 $v = \Delta X / \Delta T = 120 \text{ m} / 20 \text{ sec} = 6 \text{ m/s}$

A car starts 10 m away, then drives to 210 meters away in 40 seconds. How fast did they drive?
 $v = \Delta X / \Delta T$ about 5 m/sec (400 change of distance)
 $v = 5 = \Delta X / \Delta T = 200 \text{ m} / 40 \text{ sec} = 5 \text{ m/s}$

What force results in 5 m/s² of acceleration to a 15 kg mass?
 $F = ma = (15 \text{ kg}) \times (5 \text{ m/s}^2) = 75 \text{ N}$

A car speeds to 200 mph in 50 seconds. Calculate acceleration.
 $a = \Delta V / \Delta T = 200 \text{ mph} / 50 \text{ sec} = 4 \text{ mph/sec}$

Experimental or Control Variables	
You would not change these in the experiment: <i>Control</i> You would vary this to figure out how it works: <i>Experimental</i> You should have only one of these: <i>Experimental</i> All the other variables are: <i>CF</i>	You are trying to find out if snow shoes help a car stop or more. The amount of snow: <i>CF</i> The car used: <i>CF</i> The type of tire: <i>EF</i> (only thing that varies)

Which has more inertia: a bus, or a baller? Why?
The bus has more mass.

Which has more momentum: a bus or a fast airplane? Why?
A bus is not moving ($v = 0$) vs $p = 0$

A 3 N book rests on a table. Why doesn't it fall?
Newton's 3rd law—table pushes back with $=$ and opposite 3N force.

When an astronaut lands on the moon, does his mass change?
No, mass is not dependent on gravity.
 Does his weight change? *Yes, weight is dependent on gravity.*
 Does his inertia change? *No, inertia depends on mass.*

Where was the object at 2 seconds? *7 meters*

When did the object reach 4 meters? *1 second*

Find the slope of the graph (must show work):
 $\text{Slope} = \text{rise/run} = \Delta y / \Delta x$
 $\Delta y = 7 - 3 = 4 \text{ m}$ $\text{slope} = \Delta y / \Delta x = 4 \text{ m} / 1 \text{ sec} = 4 \text{ m/s}$
 $\Delta x = 2 - 1 = 1 \text{ sec}$

What does the slope you just found stand for? *speed*

A girl is ice skating and has 25 kg/m³ of momentum. After she bumps into a friend, she has 23 kg/m³ of momentum. How much did she give her friend? Use Law of Conservation of Momentum.
 $25 - 23 = 2 \text{ kg/m}^3$

- Which of Newton's Three Laws Applies?**
1. A rocket moves forward because it pushes out gases from the back.
 1. It is hard to push a car, then hard to stop it.
 2. A 50 N force gives more acceleration to a 5 kg object than a 10 kg object.

Using $g = 10 \text{ m/s}^2$, find the weight of a 5 kg mass.
 $F_w = mg = (5 \text{ kg})(10 \text{ m/s}^2) = 50 \text{ N}$

A person walks 5 m/s for 40 seconds. How far did they walk?
 $S = \Delta X / \Delta T$ $\Delta X = S \times \Delta T = 200 \text{ m}$
 vs. $\Delta T = 40$

A 45 N force pulls to the left and friction is 15 N. Find the net force.
 $45 \text{ N} - 15 \text{ N} = 30 \text{ N}$ to the left

What acceleration will the above net force give a 3 kg mass?
 $F = ma$ $a = F / m = 10 \text{ m/s}^2$
 vs. $30 \text{ N} = 3 \text{ kg}$

University Physics Samuel J. Ling, Jeff Sanny, William Moebs, 2017-12-19 University Physics is designed for the two or three semester calculus based physics course. The text has been developed to meet the scope and sequence of most university physics courses and provides a foundation for a career in mathematics, science, or engineering. The book provides an important opportunity for students to learn the core concepts of physics and understand how those concepts apply to their lives and to the world around them. Due to the comprehensive nature of the material, we are offering the book in three volumes for flexibility and efficiency.

Coverage and Scope: Our University Physics textbook adheres to the scope and sequence of most two and three semester physics courses nationwide. We have worked to make physics interesting and accessible to students while maintaining the mathematical rigor inherent in the subject. With this objective in mind, the content of this textbook has been developed and arranged to provide a logical progression from fundamental to more advanced concepts, building upon what students have already learned and emphasizing connections between topics and between theory and applications. The goal of each section is to enable students not just to recognize concepts but to work with them in ways that will be useful in later courses and future careers. The organization and pedagogical features were developed and vetted with feedback from science educators dedicated to the project.

VOLUME II Unit 1: Thermodynamics
Chapter 1: Temperature and Heat
Chapter 2: The Kinetic Theory of Gases
Chapter 3: The First Law of Thermodynamics
Chapter 4: The Second Law of Thermodynamics

Unit 2: Electricity and Magnetism
Chapter 5: Electric Charges and Fields
Chapter 6: Gauss's Law
Chapter 7: Electric Potential
Chapter 8: Capacitance
Chapter 9: Current and Resistance
Chapter 10: Direct Current Circuits
Chapter 11: Magnetic Forces and Fields
Chapter 12: Sources of Magnetic Fields
Chapter 13: Electromagnetic Induction
Chapter 14: Inductance
Chapter 15: Alternating Current Circuits
Chapter 16: Electromagnetic Waves

[Contesting The Future Of Nuclear Power: A Critical Global Assessment Of Atomic Energy](#) Benjamin K Sovacool, 2011-05-05 This book provides a concise but rigorous appraisal about the future of nuclear power and the presumed nuclear renaissance. It does so by assessing the technical, economic, environmental, political, and social risks related to all aspects of the nuclear fuel cycle, from uranium mills and mines to nuclear reactors and spent fuel storage facilities. In each case, the book argues that the costs of nuclear power significantly outweigh its benefits. It concludes by calling for investments in renewable energy and energy efficiency as a better path towards an affordable, secure, and socially acceptable future. The prospect of a global nuclear renaissance could change the way that energy is produced and used the world over. Sovacool takes a hard look at who would benefit, mostly energy companies and manufacturers, and who would suffer, mostly taxpayers, those living near nuclear facilities, and electricity customers. This book is a must read for anyone even remotely concerned about a sustainable energy future and also for those with a specific interest in modern nuclear power plants.

Ferroelectric and Antiferroelectric Liquid Crystals Sven T. Lagerwall, 2008-07-11 The study of ferroelectricity is a branch of solid state physics which has shown rapid growth during the recent years Ferroelectric materials exhibit unusual electric properties which make them useful in modern opto electronic technology esp display technology Ferroelectric and antiferroelectric liquid crystals including also various polymer forms are the hottest research topic today in liquid crystals The field is at the very beginning of industrial exploitation a sensitive phase in which a good reference work is needed and will have a broad spectrum of readers both at universities and in industry

Hybrid Ecologies Susanne Witzgall, Marietta Kesting, Maria Muhle, 2020 The notion of ecology not only figures centrally in current debates around climate change but also traverses contemporary discourses in the arts the humanities and the social and techno sciences In its present reformulation it refers to the multi layered and multi dimensional nexus of reciprocities between living processes technological and media practices i e to the complex relations of human and nonhuman agents The book Hybrid Ecologies understands ecology as an ambivalent notion whose multivalence opens up new fields of action and

yet thanks precisely to this openness and vast applicability at the same time raises questions not least concerning its genealogy The interdisciplinary contributions seek to explore the political and social effects that a rethinking of community in ecological and thus also in biopolitical terms may provoke and which consequences the contemporary notion of ecology might entail for artistic and design practices in particular The present publication is the result of the fifth annual program of the centre for interdisciplinary studies which was conceived in cooperation with the Chair of Philosophy Aesthetic Theory at the Academy of Fine Arts in Munich Physical Properties of Liquid Crystals George W. Gray, Volkmar Vill, Hans W.

Spiess, Dietrich Demus, John W. Goodby, 2009-08-14 This handbook is a unique compendium of knowledge on all aspects of the physics of liquid crystals In over 500 pages it provides detailed information on the physical properties of liquid crystals as well as the recent theories and results on phase transitions defects and textures of different types of liquid crystals An in depth understanding of the physical fundamentals is a prerequisite for everyone working in the field of liquid crystal

research With this book the experts as well as graduate students entering the field get all the information they need **How Students Learn** National Research Council, Division of Behavioral and Social Sciences and Education, Committee on How People Learn, A Targeted Report for Teachers, 2005-01-23 How do you get a fourth grader excited about history How do you even begin to persuade high school students that mathematical functions are relevant to their everyday lives In this volume practical questions that confront every classroom teacher are addressed using the latest exciting research on cognition teaching and learning How Students Learn History Mathematics and Science in the Classroom builds on the discoveries detailed in the bestselling How People Learn Now these findings are presented in a way that teachers can use immediately to revitalize their work in the classroom for even greater effectiveness Organized for utility the book explores how the principles of learning can be applied in teaching history science and math topics at three levels elementary middle and high school Leading educators explain in detail how they developed successful curricula and teaching approaches presenting strategies that serve as models for curriculum development and classroom instruction Their recounting of personal teaching experiences lends strength and warmth to this volume The book explores the importance of balancing students knowledge of historical fact against their understanding of concepts such as change and cause and their skills in assessing historical accounts It discusses how to build straightforward science experiments into true understanding of scientific principles And it shows how to overcome the difficulties in teaching math to generate real insight and reasoning in math students It also features illustrated suggestions for classroom activities How Students Learn offers a highly useful blend of principle and practice It will be important not only to teachers administrators curriculum designers and teacher educators but also to parents and the larger community concerned about children s education **How People Learn** National Research Council, Division of Behavioral and Social Sciences and Education, Board on Behavioral, Cognitive, and Sensory Sciences, Committee on Developments in the Science of Learning with additional material from the Committee on Learning

Research and Educational Practice,2000-08-11 First released in the Spring of 1999 How People Learn has been expanded to show how the theories and insights from the original book can translate into actions and practice now making a real connection between classroom activities and learning behavior This edition includes far reaching suggestions for research that could increase the impact that classroom teaching has on actual learning Like the original edition this book offers exciting new research about the mind and the brain that provides answers to a number of compelling questions When do infants begin to learn How do experts learn and how is this different from non experts What can teachers and schools do with curricula classroom settings and teaching methods to help children learn most effectively New evidence from many branches of science has significantly added to our understanding of what it means to know from the neural processes that occur during learning to the influence of culture on what people see and absorb How People Learn examines these findings and their implications for what we teach how we teach it and how we assess what our children learn The book uses exemplary teaching to illustrate how approaches based on what we now know result in in depth learning This new knowledge calls into question concepts and practices firmly entrenched in our current education system Topics include How learning actually changes the physical structure of the brain How existing knowledge affects what people notice and how they learn What the thought processes of experts tell us about how to teach The amazing learning potential of infants The relationship of classroom learning and everyday settings of community and workplace Learning needs and opportunities for teachers A realistic look at the role of technology in education

Introduction to Soft Matter Ian W. Hamley,2013-03-18 This book provides an introduction to this exciting and relatively new subject with chapters covering natural and synthetic polymers colloids surfactants and liquid crystals highlighting the many and varied applications of these materials Written by an expert in the field this book will be an essential reference for people working in both industry and academia and will aid in understanding of this increasingly popular topic Contains a new chapter on biological soft matter Newly edited and updated chapters including updated coverage of recent aspects of polymer science Contain problems at the end of each chapter to facilitate understanding

Ferroelectric Liquid Crystals R. Blinc,1984 Electrooptic Effects in Liquid Crystal Materials L.M. Blinov,V.G. Chigrinov,2012-12-06 Electrooptic effects provide the basis for much liquid crystal display technology This book by two of the leaders in liquid crystal research in Russia presents a complete and accessible treatment of virtually all known phenomena occurring in liquid crystals under the influence of electric fields

The Physics of Ferroelectric and Antiferroelectric Liquid Crystals Igor Muševič,Robert Blinc,Božijan Žekj,2000 This book presents the basic physics of ferroelectric and antiferroelectric liquid crystals in a simple and transparent way It treats both the basic and the applied aspects of ferroelectric and antiferroelectric liquid crystal research starting from the discovery of ferroelectricity in liquid crystals in 1975 and ending with the resonant X ray experiment in ferroelectric and antiferroelectric phases in 1998 Particular attention is paid to the optical properties electrooptic effects phase transitions and experimental methods used in liquid

crystal research Special chapters are devoted to dielectric spectroscopy light scattering NMR STM and AFM in complex fluids The more than 300 illustrations help to present the basic physics of liquid crystalline ferroelectrics and antiferroelectrics in a way that can be easily followed by students engineers and scientists dealing with liquid crystal research
