As such, this course represents an important opportunity for students to develop the necessary knowledge, tools, and skills to make informed decisions as they continue with their lives. Rather than being mired down with facts and vocabulary, the typical non-science major student needs information presented in a way that is easy to read and understand. Even more importantly, the content should be meaningful. Students do much better when they understand why biology is relevant to their everyday

lives. For these reasons, Concepts of Biology is grounded on an evolutionary basis and includes exciting features that highlight careers in the biological sciences and everyday applications of the concepts at hand. We also strive to show the interconnectedness of topics within this extremely broad discipline. In order to meet the needs of today's instructors and students, we maintain the overall organization and coverage found in most syllabi for this course. A strength of Concepts of Biology is that instructors can customize the book, adapting it to the approach that works best in their classroom. Concepts of Biology also includes an innovative art program that incorporates critical thinking and clicker questions to help students understand--and apply--key concepts. Lecture notes and work sheets for biology II Biology for NGSS is an entirely new resource, and has been developed in consultation with practising teachers in the USA. It has been specifically written to meet the high school life science requirements (HSLs) of the Next Generation Science Standards (NGSS). The three dimensions of the standards are integrated throughout the workbook: The Disciplinary Core Ideas (DCIs) provide the structural framework for the workbook, dividing it into four sections. Each chapter provides activities to specifically address the performance expectations arising from the DCIs. Science and Engineering Practices are supported throughout with activities to develop skills in analyzing and interpreting data, developing and using models, and constructing explanations from evidence. A supporting introductory chapter provides students with additional opportunities to practice the mathematical and inquiry-based skills required at this level. Crosscutting concepts

are identified throughout, allowing students to make connections between core ideas in different topics. This high school workbook covers topics required during second semester of a one-year Life Sciences curriculum. This workbook emphasizes science models, scientific data interpretation, and scientific inquiry along with a deep dive into genetics and biodiversity.
