Command Of The Air General Giulio Douhet,2014-08-15 In the pantheon of air power spokesmen Giulio Douhet holds center stage His writings more often cited than perhaps actually read appear as excerpts and aphorisms in the writings of numerous other air power spokesmen advocates and critics Though a highly controversial figure the very controversy that surrounds him offers to us a testimonial of the value and depth of his work and the need for airmen today to become familiar with his thought The progressive development of air power to the point where today it is more correct to refer to aerospace power has not outdated the notions of Douhet in the slightest In fact in many ways the kinds of technological capabilities that we enjoy as a global air power provider attest to the breadth of his vision Douhet together with Hugh Boom Trenchard of Great Britain and William Billy Mitchell of the United States is justly recognized as one of the three great spokesmen of the early air power era This reprint is offered in the spirit of continuing the dialogue that Douhet himself so perceptively began with the first edition of this book published in 1921 Readers may well find much that they disagree with in this book but also much that is of enduring value The vital necessity of Douhet s central vision that command of the air is all important in modern warfare has been proven throughout the history of wars in this century from the fighting over the Somme to the air war over Kuwait and Iraq

Failure Arjun Appadurai, Neta Alexander, 2019-11-04 Wall Street and Silicon Valley the two worlds this book examines promote the illusion that scarcity can and should be eliminated in the age of seamless flow Instead Appadurai and Alexander propose a theory of habitual and strategic failure by exploring debt crisis digital divides and dis connectivity Moving between the planned obsolescence and deliberate precariousness of digital technologies and the too big to fail logic of the Great Recession they argue that the sense of failure is real in that it produces disappointment and pain Yet failure is not a self evident quality of projects institutions technologies or lives It requires a new and urgent understanding of the conditions under which repeated breakdowns and collapses are quickly forgotten By looking at such moments of forgetfulness this highly original book offers a multilayered account of failure and a general theory of denial memory and nascent systems of control
