**Serialization and Persistent Objects** Jiri Soukup,Petr Macháček,2014-04-23 Recently, the pressure for fast processing and efficient storage of large data with complex relations increased beyond the capability of traditional databases. Typical examples include iPhone applications, computer-aided design, both electrical and mechanical, biochemistry applications, and incremental compilers. Serialization, which is sometimes used in such situations, is notoriously tedious and error-prone. In this book, Jiri Soukup and Petr Macháček show in detail how to write programs which store their internal data automatically and transparently to disk. Together with special data structure libraries which treat relations among objects as first-class entities and with a UML class diagram generator, the core application code is much simplified. The benchmark chapter shows a typical example where persistent data is faster by the order of magnitude than with a traditional database in both traversing and accessing the data. The authors explore and exploit advanced features of object-oriented languages in a depth hardly seen in print before. Yet you, as a reader, need only a basic knowledge of C, Java, C++, or Objective-C. These languages are quite similar with respect to persistency, and the authors explain their differences where necessary. The book targets professional programmers working on any industry applications; it teaches you how to design your own persistent data or how to use the existing packages efficiently. Researchers in areas like language design, compiler construction, performance evaluation, and no-SQL applications will find a wealth of novel ideas and valuable implementation tips. Under <http://www.codefarms.com/book>, you will find a blog and other information, including a downloadable zip file with the sources of all the listings that are longer than just a few lines, ready to compile and run.

*Recent Advances in Information and Communication Technology 2018* Herwig Unger, Sunantha Sodsee, Phayung Meesad, 2018-06-26 This book contains the research contributions presented at the 14th International Conference on Computing and Information Technology IC2IT 2018 organised by King Mongkut's University of Technology North Bangkok and its partners and held in the northern Thai city of Chiang Mai in July 2018. Compression of a Context-based Marshalling Methodology in Java Ryan William Harrod,2016 This report focuses on a method for serializing messages in Java which is somewhere between a customized solution and Java's built in serialization Customized serialization will lead to the fastest most optimized code but will require more development time Java's built in serialization on the other hand requires almost no effort to use but is slow and uses more than is strictly necessary This project gives a third option which requires a little more effort than Java's built in serialization but still provides fast serialization speed and low message sizes The tool presented here can take in requirements for a message to transmit which includes numbers strings booleans and enumerations and the output is a collection of Java classes which will serialize and deserialize that message In turn this generated library can be shared between projects within an organization or even with third parties The original message definition becomes a sort of interface control document while the resulting code becomes a library which can be used to communicate with the defined messages without requiring users of that message to develop their own code
