**The Grammar Dimension in Instructed Second Language Learning** Oct 26 2022 One of the key issues in second language learning and teaching concerns the role and practice of grammar instruction. Does it make a difference? How do we teach grammar in the language classroom? Is there an effective technique to teach grammar that is better than others? While some linguists address these questions to develop a better understanding of how people acquire a grammar, language acquisition scholars are in search of the most effective way to approach the teaching of grammar in the language classroom. The individual chapters in this volume will explore a variety of approaches to grammar teaching and offer a list of principles and guidelines that those involved in language acquisition should consider to design and implement effective grammar tasks during their teaching. It proposes that the key issue is not whether or not we should teach grammar but how we incorporate a teaching grammar component in our communicative language teaching practices.

**Teaching the Content Areas to English Language Learners in Secondary Schools** Aug 12 2021 This practitioner-based book provides different approaches for reaching an increasing population in today's schools - English language learners (ELLs). The recent development and adoption of the Common Core State Standards for English Language Arts and Literacy in History/Social Studies, Science, and Technical Subjects (CCSS-ELA/Literacy), the Common Core State Standards for Mathematics, the C3 Framework, and the Next Generation Science Standards (NGSS) highlight the role that teachers have in developing discipline-specific competencies. This requires new and innovative approaches for teaching the content areas to all students. The book begins with an introduction that contextualizes the chapters in which the editors highlight transdisciplinary theories and approaches that cut across content areas. In addition, the editors include a table that provides a matrix of how strategies and theories map across the chapters. The four sections of the book represent the following content areas: English language arts, mathematics, science, and social studies. This book offers practical guidance that is grounded in relevant theory and research and offers teachers suggestions on how to use the approaches described.
