

Introduction to the Practice of Statistics

Fifth Edition
Moore, McCabe

Section 1.3 Homework Answers

1.80 If you ask a computer to generate "random numbers between 0 and 1, you *uniform* will get observations from a **uniform distribution**. Figure 1.35 graphs the distribution density curve for a uniform distribution. Use areas under this density curve to answer the following questions. Define the random variable X to be the value that is generated by the computer.

Figure 1.35 The density curve of a uniform distribution, for exercise 1.80.

(a) Why is the total area under this curve equal to 1? Since the figure is defined as a density curve, then by definition it has a total area of 1 square unit. The area represents 100% of the population

(b) What proportion of the observations lie above 0.75?

To answer this question we need only to find the area above the curve corresponding to $X > 0.75$.

$$\begin{aligned} P(X > 0.75) &= \text{Height of yellow rectangle}(\text{width of yellow rectangle}) \\ &= (1)(1 - 0.75) \\ &= 0.25 \end{aligned}$$

Keep in mind that because the author chose a uniform distribution with endpoints 0 and 1, it is easy to see what the proportion should be without much thought. Make sure you learn the real lesson here, that in order to calculate proportions with density curves, the area underneath the curve is directly related to the corresponding proportion.

(c) What proportion of the observations lie between 0.25 and 0.75?

We need to calculate $P(0.25 < X < 0.75)$.

$$\begin{aligned} P(0.25 < X < 0.75) &= 1(0.75 - 0.25) \\ &= 0.5 \end{aligned}$$
