Clinical Assessment of Child and Adolescent Personality and Behavior Oct 30 2021 Psychologists offer an increasing variety of services to the public. Among these services, psychological assessment of personality and

behavior continues to be a central activity. One main reason is that other mental health professionals often do not possess a high level of competence in this area. And when dealing with children and adolescents, psychological assessment seems to take on an even greater role. Therefore, it follows that comprehensive graduate-level instruction in assessment should be a high priority for educators of psychologists who will work with these youth. This textbook is organized into three sections, consistent with the authors' approach to teaching. Part I provides students with the psychological knowledge base necessary for modern assessment practice, including historical perspectives, measurement science, child psychopathology, ethical, legal, and cultural issues, and the basics of beginning the assessment process. Part II gives students a broad review of the specific assessment methods used by psychologists, accompanied by specific advice regarding the usage and strengths and weaknesses of each method. In Part III, we help students perform some of the most sophisticated of assessment practices: integrating and communicating assessment results and infusing assessment practice with knowledge of child development and psychopathology to assess some of the most common types of behavioral and emotional disorders in youth. A text focusing on assessment practices must be updated every four to six years to keep pace with advances in test development. For example, several of the major tests reviewed in the text, such as the Behavioral Assessment System for Children and the Child Behavior Checklist, have undergone major revisions since the publication of the last edition making the current content outdated. Further, another major test, the Conners' Rating Scales, is undergoing substantial revisions that should be completed before publication of the next edition. Finally, the evidence for the validity of the tests and the recommendations for their appropriate use evolve as research accumulates and requires frequent updating to remain current. For example, there was a special issue of the *Journal of Clinical Child and Adolescent Psychology* published focusing on evidenced-based assessment of the major forms of childhood psychopathology that will need to be integrated into the chapters in Part 3. This latter point reflects an important trend in the field that should influence the marketing of the book. That is, there are several initiatives being started in all of the major areas of applied psychology (e.g., school, clinical, and counseling) to promote evidenced-based assessment practices. These initiatives have all

emphasized the need to enhance the training of graduate students in this approach to assessment. This has been the orientation of this textbook from its first edition: that is, *Clinical Assessment of Child and Adolescent Personality and Behavior* has focused on using research to guide all recommendations for practice. The ability of the textbook to meet this training need should be an important focus of marketing the book to training programs across all areas of applied psychology.

The Social Cognition and Object Relations Scale-Global Rating Method (SCORS-G) Oct 10 2022 The Social Cognition and Object Relations Scale-Global Rating Method (SCORS-G) is a clinician rated measure that can be used to code various forms of narrative material. It is comprised of eight dimensions which are scored using a seven-point Likert scale, where lower scores are indicative of more pathological aspects of object representations and higher scores are suggestive of more mature and adaptive functioning. The volume is a comprehensive reference on the 1) validity and reliability of the SCORS-G rating system; 2) in depth review of the empirical literature; 3) administration and intricacies of scoring; and 4) the implications and clinical utility of the system across settings and disciplines for clinicians and researchers.

Brockville Risk Checklist 4 (Brc4): Scoring Manual Nov 11 2022 The Brockville Risk Checklist 4 is a unique, easy-to-use tool that can be adapted to any inpatient or outpatient mental health setting. This one-page instrument is the result of over a decade of use, development and empirical research. This clear and concise manual was informed by extensive research by the authors through coordination with clinical treatment teams who have been using the tool to manage and track risk in regular treatment meetings for clients in a forensic mental health setting. As the tool's name suggests, it originates from a forensic psychiatric facility in Brockville, Ontario, Canada. The Brockville Mental Health Centre, a campus of the Royal Ottawa Health Care Group, is a secure facility treating individuals with severe mental illnesses who have been detained in the facility and in the process of gradual community reintegration. The facility employs clinicians who are renowned globally for their work with mentally disordered individuals in the forensic system, many of whom have contributed to or given feedback on the BRC4, including the authors. Included in this manual is an Internet link to a free PDF copy of the BRC4 tool, which may be printed for use. The authors of this tool hope this manual is both informative and useful in your research and/or clinical practice and helps contribute to safety and risk management in your treatment setting. All proceeds from this publication will be donated back to the Integrated Forensic Program of the Royal Ottawa Health Care Group.
