

3. What two structures make up a single replicated chromosome?

Sister chromatids.

4. In Model 1, how many replicated chromosomes does the cell contain during prophase?

Five.

Read This!

Alleles are alternative forms of the same gene. For example, gene A may contain the information for fur color. One allele "A" may result in white fur, while the alternative allele "a" may result in black fur. **Homologous chromosomes** are chromosomes that contain the same genes, although each chromosome in the homologous pair may have different alleles.

5. At which stage in meiosis I do the pairs of homologous chromosomes come together?

Late prophase I.

6. Once the chromosomes have formed a pair, what are they called?

Tetrad.

7. At the end of meiosis I, two cells have been produced. How many replicated chromosomes are in each of these cells?

Five.

8. Cells with a full set of chromosomes are referred to as **diploid** or $2n$, whereas cells with half the chromosomes are **haploid** or n . At which stage(s) of meiosis I are the cells diploid and at which stage(s) are they haploid?

Diploid = prophase, metaphase, and anaphase

Haploid = telophase after the cell has split.

9. Which of the statements below correctly describes the relationship between the cells at the end of telophase I and the original cell?

a. The new cells have one copy of all of the genetic information in the original cell.

b. The new cells have two copies of all of the genetic information in the original cell.

c. The new cells have one copy of half of the genetic information in the original cell.

d. The new cells have two copies of half of the genetic information in the original cell.

10. Considering the genetic makeup of the homologous pairs, will the cells at the end of telophase I be genetically identical to each other?

No, they will not be genetically identical to each other because the homologous pairs separated and the alleles on each homologous pair are not necessarily identical.

Chemistry 2e Paul Flowers, Richard Langely, William R. Robinson, Klaus Hellmut Theopold, 2019-02-14 Chemistry 2e is designed to meet the scope and sequence requirements of the two semester general chemistry course. The textbook provides an important opportunity for students to learn the core concepts of chemistry and understand how those concepts apply to their lives and the world around them. The book also includes a number of innovative features including interactive exercises and real world applications designed to enhance student learning. The second edition has been revised to incorporate clearer, more current and more dynamic explanations while maintaining the same organization as the first edition. Substantial improvements have been made in the figures, illustrations, and example exercises that support the text narrative. Changes made in Chemistry 2e are described in the preface to help instructors transition to the second edition.
