The Biliary System Oct 25 2023 The exponential expansion of knowledge in the field of hepatobiliary diseases makes systematic revisions of current concepts almost mandatory nowadays. This eBook summarizes the progress in understanding the molecular mechanism of cholesterol and bile acid metabolism and the physical-chemistry of biliary lipids, with emphasis on biliary lipid metabolism that is regulated by nuclear receptors in the hepatobiliary system. By guiding the readers through the various aspects of anatomy, physiology, and biochemistry of all "players" involved in bile formation, this eBook is intended to be a compendium of recent progresses in understanding the molecular mechanisms of cholesterol and bile acid metabolism. A Practical Treatise on the Diseases of the Liver and Biliary Passages May 27 2021

Diagnostic Imaging of the Liver Biliary Tract and Pancreas Apr 18 2023 The development and the widespread clinical application of various diagnostic imaging modalities, such as diagnostic ultrasonography, X-ray computed tomography, single photon emission computed tomography, and magnetic resonance imaging, have been beyond all expectation. In particular, ultrasonography and X-ray computed tomography have become major diagnostic tools for diseases of the liver, the

biliary tract, and the pancreas. They often have virtually replaced other conventional imaging modalities including invasive angiography and percutaneous transhepatic cholangiography. One modality may complement or conflict with another or other modalities. Each modality should be carefully selected with due regard for its diagnostic efficacy. In this book, the first section contains nine chapters dealing with current techniques of each diagnostic modality applicable to the liver, the biliary tract, and the pancreas. The second section deals with diseases of the liver, the biliary tract, and the pancreas and takes the form of case presentation with discussion of the significance of diagnostic imaging and diagnostic procedure. Preparation of the manuscript was made possible by the help of Dr. S. Fujita, who prepared the photographs, and Mrs. Sobajima, who typed the original manuscript. Dr. S. Miura and Miss Y. Shimizu undertook the labor of translating our manuscript from Japanese into English. I would like to express my deep appreciation to all these persons, as well as to the contributors to this book, and also to the publishers, Shujunsha, Japan and Springer-Verlag.

Diseases of the Liver and Biliary Tree May 08 2022 This book provides a comprehensive overview of the diagnosis and management of diseases of the biliary tree. Topics covered include: congenital biliary abnormalities, genetic cholangiopathies, autoimmune cholangiopathies, inflammatory and drug-related cholangiopathies, and cholangiocarcinoma. Given their particular importance (even for clinicians working with adults), pediatric conditions are also examined. In addition, a special section is devoted to pregnancy and diseases of the biliary tree, and to transplants and diseases of the biliary tree. Each chapter offers up-to-date information on the management of the diseases discussed. Moreover, the book addresses new treatments for autoimmune cholestatic liver diseases, reflecting the new therapeutic targets that have recently been discovered. Examples include farnesoid X receptor (FXR) and peroxisome proliferator-activated receptor (PPAR)-agonists, together with new drugs that affect the composition of bile flow. Given its scope, the book offers a valuable guide for a broad range of practitioners.

Progress in Surgery of the Liver, Pancreas and Biliary System Oct 13 2022 This book reflects a broad spectrum of current opinions and progress in the surgical management of liver, pancreatic and biliary disease. The enormous advances in diagnostic imaging techniques and in interventional, radiological and biliary approaches, the pathophysiological problems and their management manifest often as complications in the post-operative period, new techniques and the results of surgical approaches are all thoroughly documented. Historical background is commented upon by Dr. Kenneth Warren of Boston in the first chapter. Subsequent chapters deal with a variety of subjects but always emphasizing differences of opinion and approach and maintaining the discussive environment so typical to the present-day approach to the topic. Professor Bengmark's efforts to introduce a forum for wide discussion for diseases of the liver, pancreas and biliary tract and many recent advances in research and technology to aspects of the clinical management and outcome of patients is well rewarded in this balanced publication. Advances in this field of surgery have been and continue to be so rapid that such documentation is not only necessary but very welcome.
