Animal City Andrew A. Robichaud, 2019-12-17 Why do America's cities look the way they do If we want to know the answer we should start by looking at our relationship with animals Americans once lived alongside animals They raised them worked them ate them and lived off their products This was true not just in rural areas but also in cities which were crowded with livestock and beasts of burden But as urban areas grew in the nineteenth century these relationships changed Slaughterhouses dairies and hog ranches receded into suburbs and hinterlands Milk and meat increasingly came from stores while the family cow and pig gave way to the household pet

This great shift Andrew Robichaud reveals transformed people's relationships with animals and nature and radically altered ideas about what it means to be human. As *Animal City* illustrates, these transformations in human and animal lives were not inevitable results of population growth but rather followed decades of social and political struggles. City officials sought to control urban animal populations and developed sweeping regulatory powers that ushered in new forms of urban life. Societies for the Prevention of Cruelty to Animals worked to enhance certain animals' moral standing in law and culture in turn inspiring new child welfare laws and spurring other wide-ranging reforms. The animal city is still with us today. The urban landscapes we inhabit are products of the transformations of the nineteenth century. From urban development to environmental inequality, our cities still bear the scars of the domestication of urban America.

Mistakes Were Made (but Not by Me) Carol Tavris, 2013. Why do people dodge responsibility when things fall apart? Why the parade of public figures unable to own up when they make mistakes? Why the endless marital quarrels over who is right? Why can we see hypocrisy in others but not in ourselves? Are we all liars? Or do we really believe the stories we tell? Renowned social psychologists Carol Tavris and Elliot Aronson take a compelling look into how the brain is wired for self-justification. When we make mistakes we must calm the cognitive dissonance that jars our feelings of self-worth. And so we create fictions that absolve us of responsibility.

The Question of Animal Culture Kevin N. Laland, Bennett G. Galef, 2009-02-16. Fifty years ago a troop of Japanese macaques was observed washing sandy sweet potatoes in a stream, sending ripples through the fields of ethology, comparative psychology, and cultural anthropology. The issue of animal culture has been hotly debated ever since. Now Kevin Laland and Bennett Galef have gathered key voices in the often-rancorous debate to summarize the views along the continuum from Culture Of course to Culture Of course not. The result is essential reading for anyone interested in the validity of animal culture and what it might say about our own.

Good Natured Frans B. M. DE WAAL, F. B. M. de Waal, 2009-06-30. To observe a dog's guilty look, to witness a gorilla's self-sacrifice for a wounded mate, to watch an elephant herd's communal effort on behalf of a stranded calf, to catch animals in certain acts is to wonder what moves them. Might there be a code of ethics in the animal kingdom? Must an animal be human to be humane? In this provocative book, a renowned scientist takes on those who have declared ethics uniquely human. Making a compelling case for a morality grounded in biology, he shows how ethical behavior is as much a matter of evolution as any other trait in humans and animals alike. World-famous for his brilliant descriptions of Machiavellian power plays among chimpanzees, the nastier side of animal life, Frans de Waal here contends that animals have a nice side as well. Making his case through vivid anecdotes drawn from his work with apes and monkeys and bolstered by the intriguing, voluminous data from his and others' ongoing research, de Waal shows us that many of the building blocks of morality are natural; they can be observed in other animals. Through his eyes, we see how not just primates but all kinds of animals, from marine mammals to dogs, respond to social rules, help each other, share food, resolve conflict to mutual satisfaction, even develop a crude sense of justice and fairness. Natural selection may be harsh, but

it has produced highly successful species that survive through cooperation and mutual assistance De Waal identifies this paradox as the key to an evolutionary account of morality and demonstrates that human morality could never have developed without the foundation of fellow feeling our species shares with other animals As his work makes clear a morality grounded in biology leads to an entirely different conception of what it means to be human and humane *The Animal Estate* Harriet Ritvo,1987 Harriet Ritvo gives us a vivid picture of how animals figured in English thinking during the nineteenth century and by extension how they served as metaphors for human psychological needs and sociopolitical aspirations [The Art of Choosing](#) Sheena Iyengar,2010-04-01 Every day we make choices Coke or Pepsi Save or spend Stay or go Whether mundane or life altering these choices define us and shape our lives Sheena Iyengar asks the difficult questions about how and why we choose Is the desire for choice innate or bound by culture Why do we sometimes choose against our best interests How much control do we really have over what we choose Sheena Iyengar's award winning research reveals that the answers are surprising and profound In our world of shifting political and cultural forces technological revolution and interconnected commerce our decisions have far reaching consequences Use [The Art of Choosing](#) as your companion and guide for the many challenges ahead [The Animal Game](#) Daniel E. Bender,2016-11-07 The spread of empires in the nineteenth century brought more than new territories and populations under Western sway Animals were also swept up in the net of imperialism as jungles and veldts became colonial ranches and plantations A booming trade in animals turned many strange and dangerous species into prized commodities Tigers from India pythons from Malaya and gorillas from the Congo found their way sometimes by shady means to the zoos of major U S cities where they created a sensation Zoos were among the most popular attractions in the United States for much of the twentieth century Stoking the public's fascination savvy zookeepers animal traders and zoo directors regaled visitors with stories of the fierce behavior of these creatures in their native habitats as well as daring tales of their capture Yet as tropical animals became increasingly familiar to the American public they became ever more rare in the wild Tracing the history of U S zoos and the global trade and trafficking in animals that supplied them Daniel Bender examines how Americans learned to view faraway places and peoples through the lens of the exotic creatures on display Over time as the zoo's mission shifted from offering entertainment to providing a refuge for endangered species conservation parks replaced pens and cages [The Animal Game](#) recounts Americans' ongoing often conflicted relationship with zoos decried as anachronistic prisons by animal rights activists even as they remain popular centers of education and preservation **The Little Book of Psychology** Emily Ralls,Caroline Riggs,2021-10-05 If you want to know your Freud from your Jung and your Milgram from your Maslow strap in for this whirlwind tour of the highlights of psychology Including accessible primers on The early thinkers who contributed to psychological ideas and the birth of modern psychology Famous and often controversial experiments and their repercussions What psychology can teach us about memory language conformity reasoning and emotions The ethics of psychological studies Recent developments in

the modern fields of evolutionary and cyber psychology This illuminating little book will introduce you to the key thinkers themes and theories you need to know to understand how the study of mind and behavior has sculpted the world we live in and the way we think today *A Theory of Cognitive Dissonance* Leon Festinger,1962 Originally published Evanston Ill Row Peterson c1957 [Improving Academic Achievement](#) Joshua Aronson,Joshua Michael Aronson,2002-04-15 In this book authors discuss research and theory on the social psychological forces that shape academic achievement A key focus is to show how psychological principles can be used to foster achievement and make schooling a more enjoyable process Topics are highly relevant to both social and educational psychology with discussions of core concepts such as intelligence motivation self esteem and self concept expectations and attributions prejudice and interpersonal and intergroup relations
