Alfred V. Aho,2003 *Wild Swans* Jung Chang,2008-06-20 The story of three generations in twentieth century China that blends the intimacy of memoir and the panoramic sweep of eyewitness history a bestselling classic in thirty languages with more than ten million copies sold around the world now with a new introduction from the author An engrossing record of Mao's impact on China an unusual window on the female experience in the modern world and an inspiring tale of courage and love Jung Chang describes the extraordinary lives and experiences of her family members her grandmother a warlord's concubine her mother's struggles as a young idealistic Communist and her parents' experience as members of the Communist elite and their ordeal during the Cultural Revolution Chang was a Red Guard briefly at the age of fourteen then worked as a peasant a barefoot doctor a steelworker and an electrician As the story of each generation unfolds Chang captures in gripping moving and ultimately uplifting detail the cycles of violent drama visited on her own family and millions of others caught in the whirlwind of history **Advanced Calculus (Revised Edition)** Lynn Harold Loomis,Shlomo Zvi

Sternberg,2014-02-26 An authorised reissue of the long out of print classic textbook *Advanced Calculus* by the late Dr Lynn Loomis and Dr Shlomo Sternberg both of Harvard University has been a revered but hard to find textbook for the advanced calculus course for decades This book is based on an honors course in advanced calculus that the authors gave in the 1960's The foundational material presented in the unstarred sections of Chapters 1 through 11 was normally covered but different applications of this basic material were stressed from year to year and the book therefore contains more material than was covered in any one year It can accordingly be used with omissions as a text for a year's course in advanced calculus or as a text for a three semester introduction to analysis The prerequisites are a good grounding in the calculus of one variable from a mathematically rigorous point of view together with some acquaintance with linear algebra The reader should be familiar with limit and continuity type arguments and have a certain amount of mathematical sophistication As possible introductory texts we mention *Differential and Integral Calculus* by R Courant *Calculus* by T Apostol *Calculus* by M Spivak and *Pure Mathematics* by G Hardy The reader should also have some experience with partial derivatives In overall plan the book divides roughly into a first half which develops the calculus principally the differential calculus in the setting of normed vector spaces and a second half which deals with the calculus of differentiable manifolds **IB Physics Course Book**

Michael Bowen-Jones,David Homer,2014-01 The most comprehensive match to the new 2014 Chemistry syllabus this completely revised edition gives you unrivalled support for the new concept based approach the Nature of science The only DP Chemistry resource that includes support directly from the IB focused exam practice TOK links and real life applications drive achievement *Book of Proof* Richard H. Hammack,2016-01-01 This book is an introduction to the language and standard proof methods of mathematics It is a bridge from the computational courses such as calculus or differential equations that students typically encounter in their first year of college to a more abstract outlook It lays a foundation for more theoretical courses such as topology analysis and abstract algebra Although it may be more meaningful to the student

who has had some calculus there is really no prerequisite other than a measure of mathematical maturity
