Intelligence Leadership and Governance Dec 13 2023 This book explores the challenges leaders in intelligence communities face in an increasingly complex security environment and how to develop future leaders to deal with these issues. As the security and policy-making environment becomes increasingly complicated for decision-makers, the focus on intelligence agencies 'to deliver' more value will increase. This book is the first extensive exploration of contemporary leadership in the context of intelligence agencies, principally in the 'Five Eyes' nations (i.e. Australia, United States, United Kingdom, Canada, and New Zealand). It provides a grounded theoretical approach to building practitioner and researcher understanding of what individual and organisational factors result in better leadership. Using interviews from former senior intelligence leaders and a survey of 208 current and former intelligence leaders, the work explores the key challenges that leaders will likely face in the twenty-first century and how to address these. It also explores what principles are most likely to be important in developing future leaders of intelligence agencies in the future. This book will be of much interest to students of intelligence studies, strategic studies, leadership studies, security studies, and international relations.

Comparative Sociology of Examinations May 26 2022 Contemporary societies are constructed, constricted, and constrained by various series of examinations. Governments of both Western and non-Western countries tend to conduct detailed, multi-layered and continuous systems of tests or examinations. International tests, such as PISA and TIMSS, have also been introduced to compare the relative performances of learners within diverse educational institutions across different countries. Examinations therefore provide a methodological pivot for comparing a range of societies. They enable us to contrast the West and the East; the North and the South; tribal and mass society; ancient and postmodern civilization; and so on. Comparing parallel societies from across Asia, the Middle East, Europe, and North America, this book proposes fundamental transitions in sociological research from system to process and from communication to composition through intensive studies on examinations. It uses ethnographies, interviews, questionnaires, documents, statistics, and big-data analyses to make comparisons on broad scales of time and space. In so doing, it suggests hypotheses encompassing different kinds of societies in human history, including those in the Axial Age and the Modern Ages.

International Perspectives on Academic Assessment Feb 20 2022 The goals and content for this book are derived from three important and ongoing efforts: to advance the institution of education and to promote educational opportunities to children and youth worldwide, to promote effective assessment policies and practices that enhance sound educational practice, and to address the need to develop tests and other assessment practices in less developed countries as well as to augment and alter a number of traditional assessment practices in developed nations. These three issues provided the focus for a four-day conference that was held at St. Hugh's College, Oxford University, in June 1993. The conference theme-Test Use with Children and Youth: International Pathways to Progress-underscores the importance of addressing testing issues as efforts to improve educational opportunities for children and youth move forward. Leaders from more than seventy nations met at the United Nations sponsored World Summit for Children in 1990 to support ratification of the Convention on the Rights of the Child. Worldwide recognition that every individual has the right to develop her or his potential led to the ratification of provisions setting minimum standards for children's education.

The Third Edition includes suggested best practices for dealing with digital disinformation, politicization, and AI. Positional Analysis for Sustainable Development Jan 02 2023 Climate change, biodiversity loss, pollution of land and water, land-use changes, lack of equality and other problems at local, national and global levels represent a challenge for economics as a social science. Mainstream neoclassical economics may be able to contribute to a more sustainable society but it has also played a dominant role in a period where problems have been aggravated. A pluralist and democratic view of economics is therefore very much warranted. This book presents a multidimensional and ideologically more open view of economics: understanding economics in multidimensional terms is in accordance with the 17 sustainable development goals recognized by nations at the UN-level in 2015. Accordingly, approaches to decision making and accounting at the national- and business levels have to be reconsidered.

Neoclassical Cost-Benefit Analysis (CBA) with focus on the monetary dimension and an assumed consensus about a specific market ideology to be applied is not compatible with democratic societies where citizen and actors in other roles normally differ with respect to ideological orientation. Environmental Impact Statements and Multi-Criteria methods are used to some extent to broaden approaches to decision-making. In this book, Positional Analysis is advocated as a multidimensional and ideologically open approach. Positional Analysis is based on a political economic conceptual framework (as part of ecological economics) that differs from neoclassical ideas of individuals, firms and markets. And since approaches to decision-making and to accounting are closely connected, a new theoretical perspective in economics similarly raises issues of how national and business accounting can be opened up to meet present demands among various actors in society. This perspective raises also numerous ethical questions at the science and policy interface that need to be properly addressed for sustainability decision making.

How to Get the Right Diagnosis Dec 21 2021 A patient's guide to taking charge of your healthcare, building better relationships with doctors, and getting the most out of your visits. Many know from experience that the medical system can be difficult to navigate. Randy Pherson struggled with a medical condition for five years before getting a proper diagnosis—and once he did, had to undergo a major surgery to save his life. Because of his experience, Pherson decided to help others facing similar situations. Using his background of analytics from the CIA, Pherson offers his readers precise, analytical techniques for using the system to their advantage. As traumatic as Pherson's situation was, it is not an isolated experience. Pherson cites a network of individuals who have tried, both successfully and unsuccessfully, to navigate the medical system. By using their stories as examples, Pherson gives value to their experiences, using the lessons learned to potentially save the lives of others. With the sheer number of patients that doctors and medical staff see each day, it can be difficult to get the medical attention that you deserve. Learn how to better describe your pain and the specific questions to ask your doctor to get the proper medicine and treatment you need for your condition. Inside you'll find:

- 18 informative and applicable stories from others who have struggled with navigating the medical system
- Techniques to spur a correct diagnosis and obstacles to overcome when seeking treatment
- The right questions to ask to ensure you are getting the most accurate information

Intelligence Analysis Fundamentals May 18 2024 There are a limited number of intelligence analysis books available on the market. *Intelligence Analysis Fundamentals* is an introductory, accessible text for college level undergraduate and graduate level courses. While the principles outlined in the book largely follow military intelligence terminology and practice, concepts are presented to correlate with intelligence gathering and analysis performed in law enforcement, homeland security, and corporate and business security roles. Most of the existing texts on intelligence gathering and analysis focus on specific types of intelligence such as 'target centric' intelligence, and many of these, detail information from a position of prior knowledge. In other words, they are most valuable to the consumer who has a working-level knowledge of the subject. The book is general enough in nature that a lay student—interested in pursuing a career in intelligence, Homeland Security, or other related areas of law enforcement—will benefit from it. No prior knowledge of intelligence analysis, functions, or operations is assumed. Chapters illustrate methods and techniques that, over the years, have consistently demonstrate results, superior to those achieved with other means. Chapters describe such analytical methods that are most widely used in the intelligence community and serve as recognized standards and benchmarks in the practice of intelligence analysis. All techniques have been selected for inclusion for their specific application to homeland security, criminal investigations, and intelligence operations. Uses numerous hands-on activities—that can easily be modified by instructors to be more or less challenging depending on the course level—to reinforce concepts As current and active members of the intelligence community, the authors draw on their decades of experience in intelligence to offer real-world examples to illustrate concepts All methodologies reflect the latest trends in the intelligence communities assessment, analysis, and reporting processes with all presented being open source, non-classified information As such, the non-sensitive information presented is appropriate—and methods applicable—for use for education and training overseas and internationally Military-style collection and analysis methods are the primary ones presented, but all are directly correlated intelligence to current concepts, functions and practices within Homeland Security and the law communities Covers the counterterrorism environment where joint operations and investigative efforts combine military, private sector, and law enforcement action and information sharing The book will be a welcome addition to the body of literature available and a widely used reference for professionals and students alike.

[The Assessment Challenge in Statistics Education](#) Apr 12 2021 This book discusses conceptual and pragmatic issues in the assessment of statistical knowledge and reasoning skills among students at the college and precollege levels, and the use of assessments to improve instruction. It is designed primarily for academic audiences involved in teaching statistics and mathematics, and in teacher education and training. The book is divided in four sections: (1) Assessment goals and frameworks, (2) Assessing conceptual understanding of statistical ideas, (3) Innovative models for classroom assessments, and (4) Assessing understanding of probability.

Temporal Climatology and Anomalous Weather Analysis Jan 14 2024 By breaking down atmospheric variables into temporal climatologies and anomalies, this book demonstrates that all weather extremes and climatic events are directly associated with the anomaly component of atmospheric motion. We can use the anomaly-based synoptic chart and dynamical parameters to objectively describe these extremes and events. The conception and differences of weather, climate and general circulation tend to confuse us, because there are no clear physical definitions available for them. Weather extremes such as heat waves, cold surges, freezing rains, heavy rains, severe drought, unusual storm tracks, and tornados are common on our planet's surface. Climatic events such as Arctic warming and declining sea ice have become hot topics in recent years. An approach based on breaking down total variables into temporal climatologies and anomalies can be used to identify general circulation, analyze climatic anomalies and forecast weather extremes. Accordingly, this book will appeal to students, teachers and forecasters in the field of weather and climate alike.
