Beyond Engineering Robert Pool, 1997-07-17 We have long recognized technology as a driving force behind much historical and cultural change The invention of the printing press initiated the Reformation The development of the compass ushered in the Age of Exploration and the discovery of the New World The cotton gin created the conditions that led to the Civil War Now in *Beyond Engineering* science writer Robert Pool turns the question around to examine how society shapes technology Drawing on such disparate fields as history economics risk analysis management science sociology and psychology Pool illuminates the complex often fascinating interplay between machines and society in a book that will revolutionize how we think about technology We tend to think that reason guides technological development that engineering expertise alone determines the final form an invention takes But if you look closely enough at the history of any invention says Pool you will find that factors unrelated to engineering seem to have an almost equal impact In his wide ranging volume he traces developments in nuclear energy automobiles light bulbs commercial electricity and personal computers to reveal that the ultimate shape of a technology often has as much to do with outside and unforeseen forces For instance Pool explores the reasons why steam powered cars lost out to internal combustion engines He shows that the Stanley Steamer was in many ways superior to the Model T it set a land speed record in 1906 of more than 127 miles per hour it had no transmission and no transmission headaches and it was simpler one Stanley engine had only twenty two moving parts and quieter than a gas engine but the steamers were killed off by factors that had little or nothing to do with their engineering merits including the Stanley twins lack of business acumen and an outbreak of hoof and mouth disease Pool illuminates other aspects of technology as well He traces how seemingly minor decisions made early along the path of development can have profound consequences further down the road and perhaps most important he argues that with the increasing complexity of

our technological advances from nuclear reactors to genetic engineering the number of things that can go wrong multiplies making it increasingly difficult to engineer risk out of the equation Citing such catastrophes as Bhopal Three Mile Island the Exxon Valdez the Challenger and Chernobyl he argues that is it time to rethink our approach to technology The days are gone when machines were solely a product of larger than life inventors and hard working engineers Increasingly technology will be a joint effort with its design shaped not only by engineers and executives but also psychologists political scientists management theorists risk specialists regulators and courts and the general public Whether discussing bovine growth hormone molten salt reactors or baboon to human transplants Beyond Engineering is an engaging look at modern technology and an illuminating account of how technology and the modern world shape each other The Ethics of Technology Sven Ove Hansson,2017-03-08 Our daily lives are affected by new technologies at an ever increasing rate It is becoming more and more important to assess future technologies from an ethical point of view and to do this before they are introduced on a massive scale Such assessments require systematic use of many different kinds of knowledge In this important new book an international team of leading experts in the field provides the first comprehensive treatment of the methods available for ethical assessments of technologies and their social introduction The book explores how information from empirical research can be used in ethical analyses of technology and includes chapters showing how ethical analysis can shed light on topics such as privacy risk sustainability dual use gender issues justice international technology transfer and the responsibility of engineers It provides an invaluable resource for students in the philosophy and ethics of technology science and technology studies applied ethics bioethics business ethics and the ethics of computing *Society & Technological Change* Rudi Volti,Jennifer Croissant,2024 Society and Technological Change continues to be the essential text for exploring the relationship between human societies and the ever evolving landscape of technology The ninth edition follows the historical trajectory of technological development and its profound impact on various aspects of human life from communication and healthcare to economic systems and governance At the same time it shows how these technologies have themselves been shaped by social economic cultural and political forces and that the study of technology is important not just for its own sake but also for what it tells us about the kinds of societies we make for ourselves With its engaging writing style and thought provoking content this new edition continues to be an indispensable resource for students scholars and anyone seeking a deep understanding of the intricate bond between society and technology in our ever evolving world Back cover

Technopoly Neil Postman,2011-06-01 A witty often terrifying that chronicles our transformation into a society that is shaped by technology from the acclaimed author of Amusing Ourselves to Death A provocative book A tool for fighting back against the tools that run our lives Dallas Morning News The story of our society s transformation into a Technopoly a society that no longer merely uses technology as a support system but instead is shaped by it with radical consequences for the meanings of politics art education intelligence and truth Global Trends 2040 National Intelligence Council,2021-03 The ongoing COVID 19 pandemic marks the most significant singular global disruption since World War II with health economic political and security implications that will ripple for years to come Global Trends 2040 2021 Global Trends 2040 A More Contested World 2021 released by the US National Intelligence Council is the latest report in its series of reports starting in 1997 about megatrends and the world s future This report strongly influenced by the COVID 19 pandemic paints a bleak picture of the future and describes a contested fragmented and turbulent world It specifically discusses the four main trends that will shape tomorrow s world Demographics by 2040 1 4 billion people will be added mostly in Africa and South Asia Economics increased government debt and concentrated economic power will escalate problems for the poor and middleclass Climate a hotter world will increase water food and health insecurity Technology the emergence of new technologies could both solve and cause problems for human life Students of trends policymakers entrepreneurs academics journalists and anyone eager for a glimpse into the next decades will find this report with colored graphs essential reading **Adolescents In The Internet Age, 2nd Edition** Paris S. Strom,Robert D. Strom,2014-07-01 Teaching adolescents and learning from them is the paradigm elaborated throughout this second edition of Adolescents in the Internet Age The premise is based upon four assumptions 1 Adolescents have unique experiences that qualify them as the most credible source on what growing up is like in the current environment 2 Adolescents are more competent than many adults with tools of technology that will be needed for learning in the future 3 Adolescents and adults can support mutual development by adopting the concept of reciprocal learning and 4 The common quest of adolescents to gain adult identity could be attained before employment Expectations are the theme for every chapter The reason expectations are so important is because they influence goals determine priorities and are used to evaluate progress and achievements of individuals and institutions When teacher expectations correspond with the abilities and interests of students achievement and satisfaction are common outcomes In

contrast if teachers expect too little student potential can be undermined There is also concern if expectations that students have for themselves surpass their abilities This occurs if teachers do not inform students about their deficits Multitasking doing too many things at the same time detracts from productivity Sharing accountability depends upon complimentary and attainable expectations that can be met by students teachers and parents To support appropriate expectations this book for secondary teachers and high school students seeking a broader understanding of their own generation is organized in four parts about aspects of learning and development 1 Identity expectations introduce traditional perspectives on adolescence changes related to sources of learning evolving emphasis of schools and ways to support motivation goal setting and formation of identity 2 Cognitive expectations examine mental abilities academic standards emergence of the Internet as a learning tool development of media literacy creative problem solving and encouragement of higher order thinking skills 3 Social expectations explore the need for giving greater attention to social development importance of teamwork skills involvement with social networking adoption of civil behavior school safety and values as a basis for ethical behavior and character 4 Health expectations center on decisions that influence physical health well being and lifestyle choice Consideration is given to stress management emotional intelligence and risk assessment strategies for individual teenagers and the schools that they attend
