*Assessing Model-Based Reasoning using Evidence-Centered Design* Robert J Mislevy, Geneva Haertel, Michelle Riconscente, Daisy Wise Rutstein, Cindy Ziker, 2017-07-25 This Springer Brief provides theory practical guidance and support tools to help designers create complex valid assessment tasks for hard to measure yet crucial science education standards Understanding exploring and interacting with the world through models characterizes science in all its branches and at all levels of education Model based reasoning is central to science education and thus science assessment Current interest in developing and using models has increased with the release of the Next

Generation Science Standards which identified this as one of the eight practices of science and engineering. However, the interactive complex and often technology-based tasks that are needed to assess model-based reasoning in its fullest forms are difficult to develop. Building on research in assessment science education and learning science, this Brief describes a suite of design patterns that can help assessment designers, researchers, and teachers create tasks for assessing aspects of model-based reasoning: Model Formation, Model Use, Model Elaboration, Model Articulation, Model Evaluation, Model Revision, and Model-Based Inquiry. Each design pattern lays out considerations concerning targeted knowledge and ways of capturing and evaluating students' work. These design patterns are available at [http://design.drk.padi.sri.com/padi-do-NodeAction/state-listNodes/NODE\\_TYPE/ PARADIGM\\_TYPE/](http://design.drk.padi.sri.com/padi-do-NodeAction/state-listNodes/NODE_TYPE/ PARADIGM_TYPE/). The ideas are illustrated with examples from existing assessments and the research literature.

**In Search of Meaning and Coherence** Wolff-Michael Roth, 2019-02-18 In the course of his research career much of which was based in his own classrooms Wolff Michael Roth explored numerous new theoretical frameworks when the old ones proved to be unable to account for the data In this book surrounding 11 of his publications spanning 20 years of work the author tells a story of how science education research concretely realized and singularized itself That is rather than taking sole credit for the work that ultimately came to bear his name Roth develops a historical narrative in which his work came to realize cultural historical possibilities inherent in the field of science education But perhaps because some types of this work came to be realized for a first time Roth's research also came to be characterized by others in the community as cutting edge This work therefore presents as much an auto biographical narrative as it presents a cultural historical recollection of science education as it unfolded over the past two decades
