Broadband Circuits for Optical Fiber Communication Eduard Säcker, 2005-05-27 An expert guide to the new and emerging field of broadband circuits for optical fiber communication This exciting publication makes it easy for readers to enter into and deepen their knowledge of the new and emerging field of broadband circuits for

optical fiber communication The author's selection and organization of material have been developed, tested, and refined from his many industry courses and seminars. Five types of broadband circuits are discussed in detail: Transimpedance amplifiers, Limiting amplifiers, Automatic gain control (AGC) amplifiers, Lasers drivers, and Modulator drivers. Essential background on optical fiber photodetectors, lasers, modulators, and receiver theory is presented to help readers understand the system environment in which these broadband circuits operate. For each circuit type, the main specifications and their impact on system performance are explained and illustrated with numerical values. Next, the circuit concepts are discussed and illustrated with practical implementations. A broad range of circuits in MESFET, HFET, BJT, HBT, BiCMOS, and CMOS technologies is covered. Emphasis is on circuits for digital continuous mode transmission in the 2.5 to 40 Gb/s range, typically used in SONET, SDH, and Gigabit Ethernet applications. Burst mode circuits for passive optical networks (PON) and analog circuits for hybrid fiber-coax (HFC) cable TV applications also are discussed. Learning aids are provided throughout the text to help readers grasp and apply difficult concepts and techniques, including Chapter summaries that highlight the key points, Problem and answer sections to help readers apply their new knowledge, Research directions that point to exciting new technological breakthroughs on the horizon, Product examples that show the performance of actual broadband circuits, Appendices that cover eye diagrams, differential circuits, S parameters, transistors, and technologies, and A bibliography that leads readers to more complete and in-depth treatment of specialized topics. This is a superior learning tool for upper-level undergraduates and graduate-level students in circuit design and optical fiber communication. Unlike other texts that concentrate on analog circuits in general or mostly on optics, this text provides balanced coverage of electronic, optic, and system issues. Professionals in the fiber optic industry will find it an excellent reference incorporating the latest technology and discoveries in the industry.

Design of Integrated Circuits for Optical Communications Behzad Razavi, 2012-09-14. The only book on integrated circuits for optical communications that fully covers High Speed IOs, PLLs, CDRs, and transceiver design, including optical communication. The increasing demand for high-speed transport of data has revitalized optical communications, leading to extensive work on high-speed device and circuit design. With the proliferation of the Internet and the rise in the speed of microprocessors and memories, the transport of data continues to be the bottleneck, motivating work on faster communication channels. *Design of Integrated Circuits for Optical Communications, Second Edition* deals with the design of high-speed integrated circuits for optical communication transceivers. Building upon a detailed understanding of optical devices, the book describes the analysis and design of critical building blocks such as transimpedance and limiting amplifiers, laser drivers, phase-locked loops, oscillators, clock and data recovery circuits, and multiplexers. The Second Edition of this bestselling textbook has been fully updated with a tutorial treatment of broadband circuits for both students and engineers. New and unique information dealing with clock and data recovery circuits and multiplexers. A chapter dedicated to burst mode optical communications. A detailed study of new circuit developments for optical transceivers. An examination of

recent implementations in CMOS technology This text is ideal for senior graduate students and engineers involved in high speed circuit design for optical communications as well as the more general field of wireline communications
