**Strengthening Forensic Science in the United States** National Research Council, Division on Engineering and Physical Sciences, Committee on Applied and Theoretical Statistics, Policy and Global Affairs, Committee on Science, Technology, and Law, Committee on Identifying the Needs of the Forensic Sciences Community, 2009-07-29 Scores of talented and dedicated people serve the forensic science community performing vitally important work However they are often constrained by lack of adequate resources sound policies and national support It is clear that change and advancements both systematic and scientific are needed in a number of forensic science disciplines to ensure the reliability of work establish enforceable standards and promote best practices with consistent application Strengthening Forensic Science in the United States A Path Forward provides a detailed plan for addressing these needs and suggests the creation of a new government entity the National Institute of Forensic Science to establish and enforce standards within the forensic science community The benefits of improving and regulating the forensic science disciplines are clear assisting law enforcement officials enhancing homeland security and reducing the risk of

wrongful conviction and exoneration Strengthening Forensic Science in the United States gives a full account of what is needed to advance the forensic science disciplines including upgrading of systems and organizational structures better training widespread adoption of uniform and enforceable best practices and mandatory certification and accreditation programs While this book provides an essential call to action for congress and policy makers it also serves as a vital tool for law enforcement agencies criminal prosecutors and attorneys and forensic science educators

**Regulation of Tissue Oxygenation, Second Edition** Roland N. Pittman, 2016-08-18 This presentation describes various aspects of the regulation of tissue oxygenation including the roles of the circulatory system respiratory system and blood the carrier of oxygen within these components of the cardiorespiratory system The respiratory system takes oxygen from the atmosphere and transports it by diffusion from the air in the alveoli to the blood flowing through the pulmonary capillaries The cardiovascular system then moves the oxygenated blood from the heart to the microcirculation of the various organs by convection where oxygen is released from hemoglobin in the red blood cells and moves to the parenchymal cells of each tissue by diffusion Oxygen that has diffused into cells is then utilized in the mitochondria to produce adenosine triphosphate ATP the energy currency of all cells The mitochondria are able to produce ATP until the oxygen tension or PO<sub>2</sub> on the cell surface falls to a critical level of about 4-5 mm Hg Thus in order to meet the energetic needs of cells it is important to maintain a continuous supply of oxygen to the mitochondria at or above the critical PO<sub>2</sub> In order to accomplish this desired outcome the cardiorespiratory system including the blood must be capable of regulation to ensure survival of all tissues under a wide range of circumstances The purpose of this presentation is to provide basic information about the operation and regulation of the cardiovascular and respiratory systems as well as the properties of the blood and parenchymal cells so that a fundamental understanding of the regulation of tissue oxygenation is achieved
