Communities in Action National Academies of Sciences, Engineering, and Medicine, Health and Medicine Division, Board on Population Health and Public Health Practice, Committee on

Community-Based Solutions to Promote Health Equity in the United States,2017-04-27 In the United States some populations suffer from far greater disparities in health than others Those disparities are caused not only by fundamental differences in health status across segments of the population but also because of inequities in factors that impact health status so called determinants of health Only part of an individual s health status depends on his or her behavior and choice community wide problems like poverty unemployment poor education inadequate housing poor public transportation interpersonal violence and decaying neighborhoods also contribute to health inequities as well as the historic and ongoing interplay of structures policies and norms that shape lives When these factors are not optimal in a community it does not mean they are intractable such inequities can be mitigated by social policies that can shape health in powerful ways Communities in Action Pathways to Health Equity seeks to delineate the causes of and the solutions to health inequities in the United States This report focuses on what communities can do to promote health equity what actions are needed by the many and varied stakeholders that are part of communities or support them as well as the root causes and structural barriers that need to be overcome Thinking in Systems Donella Meadows,2008-12-03 The classic book on systems thinking with more than half a million copies sold worldwide This is a fabulous book This book opened my mind and reshaped the way I think about investing Forbes Thinking in Systems is required reading for anyone hoping to run a successful company community or country Learning how to think in systems is now part of change agent literacy And this is the best book of its kind Hunter Lovins In the years following her role as the lead author of the international bestseller Limits to Growth the first book to show the consequences of unchecked growth on a finite planet Donella Meadows remained a pioneer of environmental and social analysis until her untimely death in 2001 Thinking in Systems is a concise and crucial book offering insight for problem solving on scales ranging from the personal to the global Edited by the Sustainability Institute s Diana Wright this essential primer brings systems thinking out of the realm of computers and equations and into the tangible world showing readers how to develop the systems thinking skills that thought leaders across the globe consider critical for 21st century life Some of the biggest problems facing the world war hunger poverty and environmental degradation are essentially system failures They cannot be solved by fixing one piece in isolation from the others because even seemingly minor details have enormous power to undermine the best efforts of too narrow thinking While readers will learn the conceptual tools and methods of systems thinking the heart of the book is grander than methodology Donella Meadows was known as much for nurturing positive outcomes as she was for delving into the science behind global dilemmas She reminds readers to pay attention to what is important not just what is quantifiable to stay humble and to stay a learner In a world growing ever more complicated crowded and interdependent Thinking in Systems helps readers avoid confusion and helplessness the first step toward finding proactive and effective solutions
