In the wake of major terrorist attacks, calls for ever more draconian policies to prevent further outrages are common. Such responses raise the pressing question: is it possible to effectively fight terrorism while respecting democratic values of equality and trust? Examining recent examples of terrorist atrocities - from the murder of Muslims in New Zealand and Jews in Pittsburgh to the Charlie Hebdo attacks - Patti Tamara Lenard considers how democracies should tackle terrorism within the constraints imposed by democratic principles. For many, the tension between liberty and security necessarily means that the only way to protect security is to sacrifice liberty—but Lenard rejects this claim,

and instead argues that security's goal should be to keep all citizens equally secure in the face of terrorist threats. Critiquing existing policies, from exile to racial profiling, she outlines what ethical counter-terrorism policies should look like, arguing for strategies that respect equality and thereby maintain trust among diverse communities in democratic states. This erudite guide to how states might ethically fight terrorism will be essential reading for any student or scholar of public affairs, security, counter-terrorism, and democratic governance. This book discusses various aspects of text data mining. Unlike other books that focus on machine learning or databases, it approaches text data mining from a natural language processing (NLP) perspective. The book offers a detailed introduction to the fundamental theories and methods of text data mining, ranging from pre-processing (for both Chinese and English texts), text representation and feature selection, to text classification and text

clustering. It also presents the predominant applications of text data mining, for example, topic modeling, sentiment analysis and opinion mining, topic detection and tracking, information extraction, and automatic text summarization. Bringing all the related concepts and algorithms together, it offers a comprehensive, authoritative and coherent overview. Written by three leading experts, it is valuable both as a textbook and as a reference resource for students, researchers and practitioners interested in text data mining. It can also be used for classes on text data mining or NLP. For courses in Materials Management, Production and Inventory Control, and Logistics taught out of business and industrial technology departments. This is the only text listed in the American Production and Inventory Control Society (APICS) DPIM Exam Content Manual as the text reference for the Basics of Supply Chain Management (BSCM) CPIM certification examination. Written in a simple and user-

friendly style, it covers all the basics of supply chain management and production and inventory control. An invaluable source instruction on the principles, instrumentation, design, implementation, operation, and maintenance of an effective clean-in-place system (CIP), this guide illustrates best practices and successful applications of CIP in both pharmaceutical and biotechnology facilities. Offering reader-friendly descriptions of the various types of equipment and materials found in typical CIP processes, Clean-In-Place For Biopharmaceutical Processes will take the guess-work out of CIP development, and illustrate all one needs to know for the establishment and optimal functioning of a CIP system. This book explores the internal and external boundaries of psychoanalysis. It examines the interrelationships between various psychoanalytic theoretical and clinical perspectives as well as between psychoanalysis and other disciplines. WINNER: ACA-Bruel 2015

illustrations, one third of them in colour, vividly demonstrate the spectacular results of the algorithms used to model plant shapes and developmental processes. The latest in computer-generated images allow us to look at plants growing, self-replicating, responding to external factors and even mutating, without becoming entangled in the underlying mathematical formulae involved. The authors place particular emphasis on Lindenmayer systems - a notion conceived by one of the authors, Aristid Lindenmayer, and internationally recognised for its exceptional elegance in modelling biological phenomena. Nonetheless, the two authors take great care to present a survey of alternative methods for plant modelling. Commercial Management: theory and practice defines the role of commercial management within project-oriented organisations, providing a framework for and helping to develop a critical understanding of the factors that influence commercial

management practice. It also identifies generic aspects of this practice and provides a theoretical foundation to these activities, by reference to existing and emergent theories and concepts, as well as to relevant management best practice. The book is structured into four parts: Part 1 Introduction - Commercial Management in Project Environments explores the nature of commercial practice within project-oriented organisations at the buyer-seller interface. It presents a Commercial Management framework, which illustrates the multiple interactions and connections between the purchaser's procurement cycle and a supplier's bidding and implementation cycles. Additionally, it outlines the principle activities undertaken by the commercial function, identifies the skills and abilities that support these activities and reviews the theories and concepts that underpin commercial practice. Finally, it identifies areas of commonality of practice with other functions found within project-oriented organisations, plus

sources of potential conflict and misunderstanding. Part 2 - Elements of Commercial Theory and Practice covers commercial leadership; exploring strategy; risk and uncertainty management; financial decision-making; and key legal issues. Part 3 - Approaches to Commercial Practice addresses best practice management; and commercial and contracting strategies and tactics. Finally, Part 4 - Case Studies offers two extended case studies: Football Stadia (the Millennium Stadium, Cardiff; the Emirates Stadium, Islington; and Wembley Stadium, London); and Heathrow Terminal 5. The book provides a one-stop-shop to the many topics that underpin commercial management practice from both a demand (buy-side) and a supply (sell-side) perspective. It will help develop an understanding of the issues influencing commercial management: leadership, strategy, risk, financial, legal, best practice management and commercial and contracting strategy and tactics. This book's

companion website is at [www.wiley.com/go/lowecommercialmanagement](http://www.wiley.com/go/lowecommercialmanagement) and offers invaluable resources for both students and lecturers: • PowerPoint slides for lecturers on each chapter • Sample exam questions for students to practice • Weblinks to key journals and relevant professional bodies With forty well structured and easy to follow topics to choose from, each workbook has a wide range of case studies, questions and activities to meet both an individual or organization's training needs. Whether studying for an ILM qualification or looking to enhance the skills of your employees, Super Series provides essential solutions, frameworks and techniques to support management and leadership development. "Ideas advanced in the section Suppression Financial Policy, pages 19-21, have served as part of the foundation of economic theory of wildfire management."--Introduction to reproductions. In *International Intervention and the Problem of Legitimacy* Andrew C. Gilbert

argues for an ethnographic analysis of international intervention as a series of encounters, focusing on the relations of difference and inequality, and the question of legitimacy that permeate such encounters. He discusses the transformations that happen in everyday engagements between intervention agents and their target populations, and also identifies key instabilities that emerge out of such engagements. Gilbert highlights the struggles, entanglements and inter-dependencies between and among foreign agents, and the people of Bosnia-Herzegovina that channel and shape intervention and how it unfolds. Drawing upon nearly two years of fieldwork studying in postwar Bosnia and Herzegovina, Gilbert's probing analysis identifies previously overlooked sites, processes, and effects of international intervention, and suggests new comparative opportunities for the study of transnational action that seeks to save and secure human lives and improve the human

condition. Above all, *International Intervention and the Problem of Legitimacy* foregrounds and analyzes the open-ended, innovative, and unpredictable nature of international intervention that is usually omitted from the ordered representations of the technocratic vision and the confident assertions of many critiques. This book analyzes the historical quest of the Islamic Republic of Iran to export its revolution to the Muslim countries in the Middle East and beyond. The authors argue that Iran exported its revolution by using proxies such as Hezbollah, the Iraqi Shite militias, and the Houthis. The study unravels the casual chain behind less-known cases of Iranian sponsorship of al Qaeda (Central) and al Qaida in Iraq. It combines rigorous theory with detailed empirical analysis which can add to the current debate about ways to roll back Iran's revolutionary export. This symposium focused on the ways in which companies, industries, & enforcement officials have responded to the

organizational sentencing guidelines' incentives & other changes in the enforcement landscape that encourage businesses to develop strong compliance programs & adopt crime-controlling measures. Topics included organizational guidelines, corporate experiences in developing effective compliance programs, evolving compliance standards, enforcement schemes & policies, protection of compliance practices from disclosure, & the government's role in fostering good corporate citizenship. Making a Scientific Case for Conscious Agency and Free Will makes a series of arguments that certain human behaviors are impossible to explain in the absence of free will, and that free will emerges from materialistic processes of brain function. It outlines future directions for neuroscience studies that can harness emerging technologies and tools for systems-level analysis. All humans have the sensation that they consciously will certain things to happen and that, in the absence of external constraints, they are free to choose from among alternatives. This notion of free will is deemed obvious by the average person based on common experience. Free will is frequently defended with arguments stemming from social,

legal, philosophical, and religious perspectives. But these arguments appeal to consequences-not causes-of choices and decisions. In the past 3 decades, debate has raged within the scientific community over whether free will is in fact an illusion. Because free will would require conscious agency, the supporting corollary is that consciousness itself cannot do anything and is merely an observer rather than an actor. The availability and security of many services we rely upon including water treatment, electricity, healthcare, transportation, and financial transactions are routinely put at risk by cyber threats. The Handbook of SCADA/Control Systems Security is a fundamental outline of security concepts, methodologies, and relevant information pertaining to the This book discusses semiconductor properties, pn-junctions and the physical phenomena for understanding power devices in depth. Working principles of state-of-the-art power diodes, thyristors, MOSFETs and IGBTs are explained in

detail, as well as key aspects of semiconductor device production technology. Special peculiarities of devices from the ascending semiconductor materials SiC and GaN are discussed. This book presents significant improvements compared to its first edition. It includes chapters on packaging and reliability. The chapter on semiconductor technology is written in a more in-depth way by considering 2D- and high concentration effects. The chapter on IGBTs is extended by new technologies and evaluation of its potential. An extended theory of cosmic ray failures is presented. The range of certain important physical relationships, doubted in recent papers for use in device simulation, is cleared and substantiated in this second edition. It is increasingly clear that traditional supply chains which focus on sourcing products from the lowest possible cost suppliers are failing to exploit their full potential. Supply Chain Ethics, through case studies, surveys and unique research, identifies

and outlines best practice employed by global manufacturers, retailers and logistics companies. It examines the so-called 'triple advantage' that accrues to businesses when strategies that combine bottom line profits, sustainable environmental practices and positive societal impact are employed. Narrow supply chain strategies which focus on only one of these three factors will inevitably fail. Supply Chain Ethics covers the following issues which affect senior supply chain, operations and manufacturing managers: 'triple advantage' best practice and how it can create value for global businesses; product design; sourcing and warehousing; transportation and recycling; environmental practices of logistics companies and suppliers; supply chain technologies. There is also an invaluable Ethical Supply Chains survey of top global companies. This collection contains 200 papers presented at the ASCE International Conference on Pipeline Engineering and Construction, held in

Baltimore, Maryland, July 13-16, 2003. There are 2.4 billion people without improved sanitation and another 2.1 billion with inadequate sanitation (i.e. wastewater drains directly into surface waters), and despite improvements over the past decades, the unsafe management of fecal waste and wastewater continues to present a major risk to public health and the environment (UN, 2016). There is growing interest in low cost sanitation solutions which harness natural systems. However, it can be difficult for wastewater utility managers to understand under what conditions such nature-based solutions (NBS) might be applicable and how best to combine traditional infrastructure, for example an activated sludge treatment plant, with an NBS such as treatment wetlands. There is increasing scientific evidence that treatment systems with designs inspired by nature are highly efficient treatment technologies. The cost-effective design and implementation of ecosystems in wastewater treatment is

something that exists and has the potential to be further promoted globally as both a sustainable and practical solution. This book serves as a compilation of technical references, case examples and guidance for applying nature-based solutions for treatment of domestic wastewater, and enables a wide variety of stakeholders to understand the design parameters, removal efficiencies, costs, co-benefits for both people and nature and trade-offs for consideration in their local context. Examples through case studies are from across the globe and provide practical insights into the variety of potentially applicable solutions. This book is a reference for continuous improvement project (CIP) leaders/facilitators in manufacturing and service organizations, students (undergraduate and graduate), academics responsible for managing senior projects (Capstone Projects) and teaching quality courses, and researchers interested in how organizations could produce more effective

and efficient continuous improvement initiatives and projects. The authors collected and analyzed information and results from CIPs they facilitated or co-advised, such as the improvement of the service level in a bottle manufacturing organization, reduction of changeover in a brewery manufacturing organization, reduction of ambulance response time, and reduction of scrap in a steel transformation manufacturing organization. Many of the CIPs were previously part of award-winning white papers documenting critical improvements. Throughout this book, readers will learn: different types of CIPs metrics to identify successful CIPs the 53 factors related to CIPs success how to manage CIPs behaviors to achieve outstanding results from CIPs. Three of the chapters are supplemented with three or more case studies. In addition, the final chapter includes a list of behaviors expected from directors, continuous improvement managers, CIP leaders/facilitators, and CIP team members

to obtain the major benefits from CIPs. This edited volume provides a comprehensive overview of contemporary debates and issues in Canadian defence policy studies. The contributors examine topics including the development of Canadian defence policy and strategic culture, North American defence cooperation, gender and diversity in the Canadian military, and defence procurement and the defence industrial base. Emphasizing the process of defence policy-making, rather than just the outcomes of that process, the book focuses on how political and organizational interests impact planning, as well as the standard operating procedures that shape Canadian defence policy and practices. Social Issues in Computing provides information pertinent to the social implications of technology. This book presents the highly dynamic interaction between computers and society. Organized into 13 chapters, this book begins with an overview of the problems

associated with computers and attempts to indicate some of the viewpoints, assumptions, and biases from which the discussion is undertaken. This text then examines in detail the effects of computers on society and describes the extent of computer use. Other chapters consider the disparities in computer use between various countries, as well as the degree to which various countries are able to share in the market for computer products and services. This book discusses as well the factors that led to the rapid and widespread adoption of computers. The final chapter deals with the effects of automation, computers, and technology. This book is a valuable resource for computer science students and research workers. The definitive guide for Part 3 MRCOG candidates, written by the two examiners leading the development of the new exam. The world is currently undergoing an historic energy transition, driven by increasingly stringent decarbonisation policies and rapid advances in low-carbon technologies. The large-

scale shift to low-carbon energy is disrupting the global energy system, impacting whole economies, and changing the political dynamics within and between countries. This open access book, written by leading energy scholars, examines the economic and geopolitical implications of the global energy transition, from both regional and thematic perspectives. The first part of the book addresses the geopolitical implications in the world's main energy-producing and energy-consuming regions, while the second presents in-depth case studies on selected issues, ranging from the geopolitics of renewable energy, to the mineral foundations of the global energy transformation, to governance issues in connection with the changing global energy order. Given its scope, the book will appeal to researchers in energy, climate change and international relations, as well as to professionals working in the energy industry. Timely and profound philosophical meditations on how great figures in history, literature,

music, and art searched for solace while facing tragedies and crises, from the internationally renowned historian of ideas and Booker Prize finalist Michael Ignatieff. When we lose someone we love, when we suffer loss or defeat, when catastrophe strikes—war, famine, pandemic—we go in search of consolation. Once the province of priests and philosophers, the language of consolation has largely vanished from our modern vocabulary, and the places where it was offered, houses of religion, are often empty. Rejecting the solace of ancient religious texts, humanity since the sixteenth century has increasingly placed its faith in science, ideology, and the therapeutic. How do we console each other and ourselves in an age of unbelief? In a series of lapidary meditations on writers, artists, musicians, and their works—from the books of Job and Psalms to Albert Camus, Anna Akhmatova, and Primo Levi—esteemed writer and historian Michael Ignatieff shows how men and women in extremity have looked to each

other across time to recover hope and resilience. Recreating the moments when great figures found the courage to confront their fate and the determination to continue unafraid, *On Consolation* takes those stories into the present, movingly contending that we can revive these traditions of consolation to meet the anguish and uncertainties of our precarious twenty-first century. This comprehensive book serves as a review for the Fellow of Interventional Pain Practice (FIPP) exam and functions as a concise guide for all interventional pain doctors. Through educational initiatives, it helps to promote consensus-building among experts on the effectiveness of existing techniques and avenues for advancement of therapeutic performances. The book is divided into four sections (head and neck, thoracic, lumbar and sacral/pelvic), and each chapter is devoted to the safe, standardized approach to interventional procedures. To prepare both the examiner and the examinee for the FIPP examination, each

chapter contains the relevant C-arm images and outlines the most common reasons for “unacceptable procedures performance” and “potentially unsafe procedures performance.” Distinguishing it from many of the previous guides, it also includes labeled fluoroscopic high quality images and focuses on the current FIPP-examined procedures with all accepted approaches. Written and edited by world leaders in pain, Interventional Pain guides the reader in study for FIPP Exam and offers a consensus on how interventional procedures should be performed and examined. This study guide for the elective module Socially Responsible Warehousing and Distribution (L3M6) forms part of the CIPS Level 3 Certificate in Procurement and Supply Operations qualification. The study guide follows the syllabus guide with a chapter dedicated to each of the learning outcomes. On completion of this book you will: understand the concepts of sustainability and corporate social responsibility (CSR); understand environmental

impacts; understand methods for the storage and movement of inventory.
