"Phantoms is gruesome and unrelenting...It's well realized, intelligent, and humane."—Stephen King They found the town silent, apparently abandoned. Then

they found the first body, strangely swollen and still warm. One hundred fifty were dead, 350 missing. But the terror had only begun in the tiny mountain town of Snowfield, California. At first they thought it was the work of a maniac. Or terrorists. Or toxic contamination. Or a bizarre new disease. But then they found the truth. And they saw it in the flesh. And it was worse than anything any of them had ever imagined... After a couple of years of battling vicious monsters, the rag-tag team decides to take a vacation in Baja, Mexico. All is well until a distraught local finds them and asks

for help rescuing a lost fishing charter not far off the coast of Baja. A simple mission, sure, but little do they know, it's all a setup and now they must face a huge cryptid with massive jaws and hunger beyond imagination. 2024 Nautilus Book Awards Silver Winner in "Religion / Spirituality of Western Thought" Category Winner of the Living Now Book Award, Church of the Wild reminds us that once upon a time, humans lived in an intimate relationship with nature. Whether disillusioned by the dominant church or unfulfilled by traditional expressions of faith, many of us long for a deeper

spirituality. Victoria Loorz certainly did. Coping with an unraveling vocation, identity, and planet, Loorz turned to the wanderings of spiritual leaders and the sanctuary of the natural world, eventually cofounding the Wild Church Network and Seminary of the Wild. With an ecospiritual lens on biblical narratives and a fresh look at a community larger than our own species, Church of the Wild uncovers the wild roots of faith and helps us deepen our commitment to a suffering earth by falling in love with it--and calling it church. Through mystical encounters with wild deer, whispers from a

scrubby oak tree,
wordless
conversation with a
cougar, and more,
Loorz helps us
connect to a love
that literally holds
the world together--
a love that calls us
into communion
with all creatures.

Weekly One of
Bustle's Best Books
of 2020! An
unforgettable story
of a fiercely original
young woman,
whose radical
perspective
illuminates a new
way of being in the
world As a full
moon rises over
Melbourne,

Australia, a young
woman gets ready
for a party. And
what appears to be
an ordinary night
out is—through the
prism of her
singular
perspective—extrao
rdinary. As the
evening unfolds,
each encounter she
has reveals the vast
discrepancies
between what she
is thinking and
feeling, and what
she is able to say.
And there's so
much she'd like to
say. So when she
meets a man and a
genuine connection
occurs, it's nothing
short of a miracle.
However, it isn't
until she invites him
home that we come
to appreciate the
humanity beneath
the labels we cling
to, and we can
grasp the pleasure
of what it means to

be alive. The debut
novel from the
inimitable
Madeleine Ryan, *A
Room Called Earth*
is a humorous and
heartwarming
adventure inside
the mind of a bright
and dynamic
woman. This hyper-
saturated
celebration of love
and acceptance,
from a neurodiverse
writer, is a
testament to
moving through life
without fear, and to
opening ourselves
up to a new way of
relating to one
another. In Amanda
Skenandore's
provocative and
profoundly moving
debut, set in the
tragic intersection
between white and
Native American
culture, a young
girl learns about
friendship, betrayal,
and the sacrifices

made in the name of belonging. On a quiet Philadelphia morning in 1906, a newspaper headline catapults Alma Mitchell back to her past. A federal agent is dead, and the murder suspect is Alma's childhood friend, Harry Muskrat. Harry—or Asku, as Alma knew him—was the most promising student at the “savage-taming” boarding school run by her father, where Alma was the only white pupil. Created in the wake of the Indian Wars, the Stover School was intended to assimilate the children of neighboring reservations. Instead, it robbed them of everything they'd known—language,

customs, even their names—and left a heartbreaking legacy in its wake. The bright, courageous boy Alma knew could never have murdered anyone. But she barely recognizes the man Asku has become, cold and embittered at being an outcast in the white world and a ghost in his own. Her lawyer husband, Stewart, reluctantly agrees to help defend Asku for Alma's sake. To do so, Alma must revisit the painful secrets she has kept hidden from everyone—especially Stewart. Told in compelling narratives that alternate between Alma's childhood and her present life, *Between Earth and Sky* is a

haunting and complex story of love and loss, as a quest for justice becomes a journey toward understanding and, ultimately, atonement. Maybe it's the end of the world, but not for Candace Chen, a millennial, first-generation American and office drone meandering her way into adulthood in Ling Ma's offbeat, wryly funny, apocalyptic satire, *Severance*. "A stunning, audacious book with a fresh take on both office politics and what the apocalypse might bring." —Michael Schaub, NPR.org "A satirical spin on the end times-- kind of like *The Office* meets *The Leftovers*." --Estelle

Candace Chen, a
millennial drone
self-sequestered in
a Manhattan office
tower, is devoted to
routine. With the
recent passing of
her Chinese
immigrant parents,
she's had her fill of
uncertainty. She's
content just to
carry on: She goes
to work,
troubleshoots the
teen-targeted
Gemstone Bible,
watches movies in a
Greenpoint
basement with her
boyfriend. So
Candace barely
notices when a
plague of biblical
proportions sweeps
New York. Then
Shen Fever
spreads. Families
flee. Companies
cease operations.
The subways
screech to a halt.
Her bosses enlist

her as part of a
dwindling skeleton
crew with a big
end-date payoff.
Soon entirely alone,
still unfevered, she
photographs the
eerie, abandoned
city as the
anonymous blogger
NY Ghost. Candace
won't be able to
make it on her own
forever, though.
Enter a group of
survivors, led by
the power-hungry
IT tech Bob.
They're traveling to
a place called the
Facility, where, Bob
promises, they will
have everything
they need to start
society anew. But
Candace is carrying
a secret she knows
Bob will exploit.
Should she escape
from her rescuers?
A send-up and
takedown of the
rituals, routines,
and missed

opportunities of contemporary life, Ling Ma's *Severance* is a moving family story, a quirky coming-of-adulthood tale, and a hilarious, deadpan satire. Most important, it's a heartfelt tribute to the connections that drive us to do more than survive. A fascinating exploration of an ancient system of beliefs and its links to the evolution of dance. From Southern Greece to northern Russia, people living in agrarian communities have long believed in "dancing goddesses," mystical female spirits who spend their nights and days dancing in the fields and forests.

In *The Dancing Goddesses*, archaeologist, linguist, and lifelong folkdancer Elizabeth Wayland Barber follows the trail of these spirit maidens—long associated with fertility, marriage customs, and domestic pursuits—from their early appearance in traditional folktales and harvest rituals to their more recent incarnations in fairytales and present-day dance. Illustrated with photographs, maps, and line drawings, the result is a brilliantly original work that stands at the intersection of archaeology and folk traditions—at once a rich portrait of our rich agrarian ancestry and an enchanting

reminder of the human need to dance. The fascinating story of how the fossils of dinosaurs, mammoths, and other extinct animals influenced some of the most spectacular creatures of classical mythology—Griffins, Centaurs, Cyclopes, and Giants—these fabulous creatures of classical mythology continue to live in the modern imagination through the vivid accounts that have come down to us from the ancient Greeks and Romans. But what if these beings were more than merely fictions? What if monstrous creatures once roamed the earth in the very places

where their legends first arose? This is the arresting and original thesis that Adrienne Mayor explores in *The First Fossil Hunters*. Through careful research and meticulous documentation, she convincingly shows that many of the giants and monsters of myth did have a basis in fact—in the enormous bones of long-extinct species that were once abundant in the lands of the Greeks and Romans. As Mayor shows, the Greeks and Romans were well aware that a different breed of creatures once inhabited their lands. They frequently encountered the fossilized bones of these primeval

beings, and they developed sophisticated concepts to explain the fossil evidence, concepts that were expressed in mythological stories. The legend of the gold-guarding griffin, for example, sprang from tales first told by Scythian gold-miners, who, passing through the Gobi Desert at the foot of the Altai Mountains, encountered the skeletons of Protoceratops and other dinosaurs that littered the ground. Like their modern counterparts, the ancient fossil hunters collected and measured impressive petrified remains and displayed them in temples and

museums; they attempted to reconstruct the appearance of these prehistoric creatures and to explain their extinction. Long thought to be fantasy, the remarkably detailed and perceptive Greek and Roman accounts of giant bone finds were actually based on solid paleontological facts. By reading these neglected narratives for the first time in the light of modern scientific discoveries, Adrienne Mayor illuminates a lost world of ancient paleontology. Originally published: New York: Farrar, Straus and Giroux, 1983. " ... Concise

explanations and descriptions - easily read and readily understood - of what we know of the chain of events and processes that connect the Sun to the Earth, with special emphasis on space weather and Sun-Climate."--Dear Reader. This book is intended for geophysicists, astronomers (especially those with an interest in history), historians and orientalists. The culmination of many years of research, it discusses, in depth, ancient and medieval eclipse observations and their importance in studying Earth's past rotation. This was the first major book on this subject to appear in the last twenty years. The

author has specialised in the interpretation of early astronomical records and their application to problems in modern astronomy for many years. The book contains an in-depth discussion of numerous eclipse records from Babylon, China, Europe and the Arab lands. Translations of almost every record studied are given. It is shown that although tides play a dominant long-term role in producing variations in Earth's rate of rotation - causing a gradual increase in the length of the day - there are significant, and variable non-tidal changes in opposition to the

main trend. In *The Earth Moved*, Amy Stewart takes us on a journey through the underground world and introduces us to one of its most amazing denizens. The earthworm may be small, spineless, and blind, but its impact on the ecosystem is profound. It ploughs the soil, fights plant diseases, cleans up pollution, and turns ordinary dirt into fertile land. Who knew? In her witty, offbeat style, Stewart shows that much depends on the actions of the lowly worm. Charles Darwin devoted his last years to the meticulous study of these creatures, praising their remarkable

abilities. With the august scientist as her inspiration, Stewart investigates the worm's subterranean realm, talks to oligochaetologists—the unsung heroes of earthworm science—who have devoted their lives to unearthing the complex life beneath our feet, and observes the thousands of worms in her own garden. From the legendary giant Australian worm that stretches to ten feet in length to the modest nightcrawler that wormed its way into the heart of Darwin's last book to the energetic red wigglers in Stewart's compost bin, *The Earth Moved* gives worms their due and

exposes their hidden and extraordinary universe. This book is for all of us who appreciate Mother Nature's creatures, no matter how humble. A beautifully illustrated book of imaginary fables about Earth's early -- and lost -- history. Before our history began, another -- now forgotten -- civilization thrived. The people who roamed Early Earth were much like us: curious, emotional, funny, ambitious, and vulnerable. In this series of illustrated and linked tales, Isabel Greenberg chronicles the explorations of a young man as he paddles from his home in the North Pole to the South

Pole. There, he meets his true love, but their romance is ill-fated. Early Earth's unusual and finicky polarity means the lovers can never touch. As intricate and richly imagined as the work of Chris Ware, and leavened with a dry wit that rivals Kate Beaton's in *Hark! A Vagrant*, Isabel Greenberg's debut will be a welcome addition to the thriving graphic novel genre. J. Barton Mitchell's sci-fi tour de force *Conquered Earth* series concludes as the characters try and unite Earth's disparate survivors to overthrow its alien invaders once and for all. The Severed Tower is no more. Zoey has been taken by the Assembly, and time

is running out. Just as their feelings are finally out in the open, Holt Hawkins and Mira Toombs are forced apart onto individual quests to try and unite Earth's survivors against their alien invaders. Mira ventures west, holding together a fragile coalition of Wind Traders, White Helix, and rebel Assembly, a mix of groups that do not trust the other. The voices of the Assembly in Mira's head threaten to drive her mad, and she soon learns a grim reality: that the one resource they have on their side, the Strange Lands artifacts, are dying, and soon the world will be a very different place. Meanwhile, Holt

travels with Ravan and Avril to Faust, the dangerous desert city of the Menagerie pirate guild. He goes not only to resolve his issues with Tiberius, its tyrannical leader, but to enlist the Menagerie in the fight to save Zoey. Except Tiberius has his own problems. The Menagerie is splintering, word of rebellion is spreading. If Holt wants their help, he might have to side with his greatest enemy in exchange. Valley of Fires is the final installment in J. Barton Mitchell's Conquered Earth series, following Midnight City and The Severed Tower, and it brings the genre-bending series to an utterly

unforgettable close. Now a Netflix film starring Julia Roberts, Mahershala Ali, Ethan Hawke, Myha'la, Farrah Mackenzie, Charlie Evans and Kevin Bacon. Written for the Screen and Directed by Sam Esmail. Executive Producers Barack and Michelle Obama, Tonia Davis, Daniel M. Stillman, Nick Krishnamurthy, Rumaan Alam A Read with Jenna Today Show Book Club Pick! Finalist for the 2020 National Book Award in Fiction One of Barack Obama's Summer Reads A Best Book of the Year From: The Washington Post * Time * NPR * Elle * Esquire * Kirkus * Library

Journal * The Chicago Public Library * The New York Public Library * BookPage * The Globe and Mail * EW.com * The LA Times * USA Today * InStyle * The New Yorker * AARP * Publisher's Lunch * LitHub * Book Marks * Electric Literature * Brooklyn Based * The Boston Globe A magnetic novel about two families, strangers to each other, who are forced together on a long weekend gone terribly wrong. From the bestselling author of Rich and Pretty comes a suspenseful and provocative novel keenly attuned to the complexities of parenthood, race, and class. Leave the World Behind

explores how our closest bonds are reshaped—and unexpected new ones are forged—in moments of crisis. Amanda and Clay head out to a remote corner of Long Island expecting a vacation: a quiet reprieve from life in New York City, quality time with their teenage son and daughter, and a taste of the good life in the luxurious home they've rented for the week. But a late-night knock on the door breaks the spell. Ruth and G. H. are an older couple—it's their house, and they've arrived in a panic. They bring the news that a sudden blackout has swept the city. But in this rural area—with the

TV and internet now down, and no cell phone service—it's hard to know what to believe. Should Amanda and Clay trust this couple—and vice versa? What happened back in New York? Is the vacation home, isolated from civilization, a truly safe place for their families? And are they safe from one another? These wickedly authentic introductions to twenty-first-century books preface tomes on teaching English to bacteria, using animated X-rays to create "pornograms," and analyzing computer-generated literature through the science of "bitistics." "Lem, a

science fiction
Bach, plays in this
book a googleplex
of variations on his
basic themes" (New
York Times Book
Review). Translated

Helen and Kurt
Wolff Book Why
were Prometheus
and Loki envisioned
as chained to
rocks? What was
the Golden Calf?
Why are mirrors
believed to carry
bad luck? How
could anyone think
that mortals like
Perseus, Beowulf,
and St. George
actually fought
dragons, since
dragons don't exist?
Strange though
they sound,
however, these
"myths" did not
begin as fiction.
This absorbing book
shows that myths
originally
transmitted real

information about
real events and
observations,
preserving the
information
sometimes for
millennia within
nonliterate
societies.
Geologists'
interpretations of
how a volcanic
cataclysm long ago
created Oregon's
Crater Lake, for
example, is echoed
point for point in
the local myth of its
origin. The Klamath
tribe saw it happen
and passed down
the story--for nearly
8,000 years. We,
however, have been
literate so long that
we've forgotten
how myths encode
reality. Recent
studies of how our
brains work,
applied to a wide
range of data from
the Pacific
Northwest to

ancient Egypt to
modern stories
reported in
newspapers, have
helped the Barbers
deduce the
characteristic
principles by which
such tales both
develop and
degrade through
time. Myth is in fact
a quite reasonable
way to convey
important messages
orally over many
generations--
although reasoning
back to the original
events is possible
only under rather
specific conditions.
Our oldest written
records date to
5,200 years ago,
but we have been
speaking and
mythmaking for
perhaps 100,000.
This
groundbreaking
book points the way
to restoring some of
that lost history and

teaching us about human storytelling. Lord of the Flies meets War of the Worlds in J. Barton Mitchell's alien-invaded post-apocalyptic world where two teens and a young girl with amazing powers must stop the aliens' mysterious plan Earth has been conquered by an alien race known as the Assembly. The human adult population is gone, having succumbed to the Tone---a powerful, telepathic super-signal broadcast across the planet that reduces them to a state of complete subservience. But the Tone has one critical flaw. It only affects the population once they reach their

early twenties, which means that there is one group left to resist: Children. Holt Hawkins is a bounty hunter, and his current target is Mira Toombs, an infamous treasure seeker with a price on her head. It's not long before Holt bags his prey, but their instant connection isn't something he bargained for. Neither is the Assembly ship that crash-lands near them shortly after. Venturing inside, Holt finds a young girl who remembers nothing except her name: Zoey. As the three make their way to the cavernous metropolis of Midnight City, they encounter young freedom fighters,

mutants, otherworldly artifacts, pirates, feuding alien armies, and the amazing powers that Zoey is beginning to exhibit. Powers that suggest she, as impossible as it seems, may just be the key to stopping the Assembly once and for all. Midnight City is the breathtaking first book of the Conquered Earth series. Modern technology is pitted against ancient dinosaurs in this scientific thriller James Rollins calls "Jurassic Park set amid the paradox of time travel." Paleontologist Richard Leyster is perfectly content in his position with the Smithsonian excavating dinosaur

fossil sites and publishing his findings . . . until the mysterious Harry Griffin appears in his office with a cooler containing the head of a freshly killed Stegosaurus. The enigmatic stranger offers Leyster the opportunity to travel back in time to study living dinosaurs in their original habitats—but with strings attached. Soon, the paleontologist finds himself, along with a select team of colleagues—including his chief rival, the ambitious and often ruthless Dr. Gertrude Salley—making discoveries that would prove impossible working from fossils alone. But when Leyster

and his team are stranded in the Cretaceous, they must learn to survive while still keeping alive the joy of scientific discovery. This shocking novel spans hundreds of millions of years and deals with the ultimate fate not only of the dinosaurs but also of all humankind. Nominated for the Locus Award, the Hugo Award, and the Nebula Award for Best Novel, *Bones of the Earth* cements author Michael Swanwick as an author who “proves that sci-fi has plenty of room for wonder and literary values” (San Francisco Chronicle). “An utterly absorbing account of one of history’s most

momentous battles” (Forbes) that not only changed the Civil War but the future of all sea power—from acclaimed popular historian Richard Snow, who “writes with verve and a keen eye” (The New York Times Book Review). No single sea battle has had more far-reaching consequences than the one fought in Hampton Roads, Virginia, in 1862. The Confederacy, with no fleet of its own, took a radical step to combat the Union blockade, building an iron fort containing ten heavy guns on the hull of a captured Union frigate named the Merrimack. The North got word of the project, and, in panicky

desperation, commissioned an eccentric inventor named John Ericsson to build the Monitor, an entirely revolutionary iron warship. Rushed through to completion in just one hundred days, it mounted only two guns, but they were housed in a shot-proof revolving turret. The ship hurried south from Brooklyn, only to arrive to find the Merrimack had already sunk half the Union fleet—and would be back to finish the job. When she returned, the Monitor was there. She fought the Merrimack to a standstill, and, many believe, saved the Union cause. As soon as word of the

fight spread, Great Britain—the foremost sea power of the day—ceased work on all wooden ships. A thousand-year-old tradition ended and the naval future opened. Richly illustrated with photos, maps, and engravings, Iron Dawn “renders all previous accounts of the encounter between the Monitor and the Merrimack as obsolete as wooden war ships” (The Dallas Morning News). Richard Snow brings to vivid life the tensions of the time in this “lively tale of science, war, and clashing personalities” (The Wall Street Journal). Robot armies, an arms race in space, and a brain at war with

itself add up to “a futuristic version of Dr. Jekyll and Mr. Hyde” (The Boston Phoenix). Anxious to avoid a war that would destroy the entire planet, the major powers of Earth have come to an ingenious compromise. Each country sends a force of adaptable, self-programming robots to the surface of the moon to play out the conflict there and, hopefully, reach a mutually agreeable stalemate. But when the robots stop responding, it is up to Ijon Tichy to travel to the lunar war zone and discover what went wrong. Tichy finds what he needs to know, but falls victim to an attack that severs the left and right sides of

his brain: one of which knows nothing about the status of the moon, the other of which isn't telling. Now Tichy finds himself at the center of a new sort of war of attrition, with each world power clamoring for his knowledge and each half of his stubborn brain clamoring for control. Wry and action-packed in equal measure, Stanislaw Lem's absurd, insightful sendup of the Cold War is required reading for any fan of science fiction. Here, "humor and a breathless pace create a delightful and thought-provoking read" (Publishers Weekly). Our history is littered with heads. Over

the centuries, they have decorated our churches, festooned our city walls and filled our museums; they have been props for artists and specimens for laboratory scientists, trophies for soldiers and items of barter. Today, as videos of decapitations circulate online and cryonicists promise that our heads may one day live on without our bodies, the severed head is as contentious and compelling as ever. From shrunken heads to trophies of war; from memento mori to Damien Hirst's *With Dead Head*; from grave-robbing phrenologists to enterprising scientists, Larson explores the bizarre, often

gruesome and confounding history of the severed head. Its story is our story. Thailand has become well known throughout the world for wonderful cuisine, great package holidays, sumptuous temples and textiles. Noticeably absent from glossy tourist brochures but equally well known throughout the Western world is Thailand's seedier side - the world of child exploitation, rampant prostitution and AIDS. Thailand maintains its appeal by slipping the ugly and painful out of sight and by promoting women as exotic visual icons through beauty contests, state rituals and the

sex trade. This book explores the construction of gender in Thailand and in particular the role Bangkok plays in establishing gender relations for the whole of the country. It examines the historical and cultural processes underlying Thai public culture, including historical theme parks. The author demonstrates how the materiality of the Thai world shapes gender relations and how Buddhism discourages essentialisms, including fixed binary gender identities. Throughout the book, appearances are shown to be critically important,

and the essentialism of gender is maintained through display, public presentations, and everyday material practices. Anyone wishing to understand the complexity of Thailand will find this book provides a highly readable and insightful analysis. In today's society it is generally the written word that holds the authority. We are more likely to trust the words found in a history textbook over the version of history retold by a friend – after all, human memory is unreliable, and how can you be sure your friend hasn't embellished the facts? But before humans were writing down their

knowledge, they were telling it to each other in the form of stories. The *Edge of Memory* celebrates the predecessor of written information – the spoken word, tales from our ancestors that have been passed down, transmitting knowledge from one generation to the next. Among the most extensive and best-analysed of these stories are from native Australian cultures. These stories conveyed both practical information and recorded history, describing a lost landscape, often featuring tales of flooding and submergence. These folk traditions are increasingly

supported by hard science. Geologists are starting to corroborate the tales through study of climatic data, sediments and land forms; the evidence was there in the stories, but until recently, nobody was listening. In this book, Patrick Nunn unravels the importance of these tales, exploring the science behind folk history from various places - including northwest Europe and India - and what it can tell us about environmental phenomena, from coastal drowning to volcanic eruptions. These stories of real events were passed across the generations, and over thousands of years, and they have broad

implications for our understanding of how human societies have developed through the millennia, and ultimately how we respond collectively to changes in climate, our surroundings and the environment we live in. An absorbing exploration of the mysterious, perfectly preserved Caucasian mummies of western China--an informative unveiling of an ancient and exotic world. 16 pp. of color photos. 50 drawings. Author lectures. Theodore Longarm is a convicted criminal. A murderer, terrorist, and smuggler, he must live out his days in prison. This is no

ordinary prison. With his memory destroyed, but knowing the full extent of his crimes, Theodore must find the truth of his past, and his future. All while knowing he was a monster. What does it mean to be human? How much can he lose, or gain, and still be him? Everything has a cost. Is freedom worth the price? Our earliest mythologies tell us we all start as a little bit of dirt. These stories carry a profound message: each of us is born with a deep and abiding connection to the earth, one that many of us have lost touch with. The Silent Spring for today's environmental

activists, this book offers an invitation to reestablish our relationship with nature to repair our damaged environment.

Chapter 1 examines the threats to the planet's health through the lens of the human energy system known as the chakras, describing how the broken first chakra relates to our disconnection from our biosphere.

Chapter 2 shows how our current environmental crises--global warming, climate change, dwindling water resources, natural disasters such as wildfires and hurricanes--represent severe manifestations of our disconnection from the earth.

Chapter 3 describes

how the preponderance of oil in our culture--especially agribusiness--compounds this disconnection, from our dependence on other countries for our energy, to current issues of oil depletion, peak oil, and fracking, to the dumbing down of our agricultural polyculture.

Chapter 4 explains how the most basic building blocks of our nourishment--seeds--are being compromised with a loss of biodiversity and rise of GMOs, and how that adversely affects the farmers whose sacred connection to the land has in many cases been severed. Chapter 5 describes the ways in which we as individuals can

begin to wake up to climate activism as a spiritual practice. This chapter includes specific activities that you can use to implement change and heal your own connection to the earth. By learning and practicing ritual and understanding the earth's rhythms and seasonal rites of passage, each of us can find unique ways to heal our own connections and help others heal theirs. Chapter 6 brings to life Goethe's wisdom: "Knowing isn't enough; neither is being willing. We must do," by providing strategies and resources for exploring how each of us can find our own Earth Calling, then anchoring that

calling with the only force that ignites change: Action. Robyn Schneider's *The Beginning of Everything* is a witty and heart-wrenching teen novel that will appeal to fans of books by John Green and Ned Vizzini, novels such as *The Perks of Being a Wallflower*, and classics like *The Great Gatsby* and *The Catcher in the Rye*. Varsity tennis captain Ezra Faulkner was supposed to be homecoming king, but that was before—before his girlfriend cheated on him, before a car accident shattered his leg, and before he fell in love with unpredictable new girl Cassidy Thorpe. As Kirkus said in a

starred review, "Schneider takes familiar stereotypes and infuses them with plenty of depth. Here are teens who could easily trade barbs and double entendres with the characters that fill John Green's novels." Funny, smart, and including everything from flash mobs to blanket forts to a poodle who just might be the reincarnation of Jay Gatsby, *The Beginning of Everything* is a refreshing contemporary twist on the classic coming-of-age novel—a heart-wrenching story about how difficult it is to play the part that people expect, and how new

beginnings can stem from abrupt and tragic endings. Originally published in single magazine form as *Severed* #1-7. A Girl on a couch appeared in an electro-magnetically generated cloud and it was deduced to be a vision from the past. UFO's are seen to appear and disappear out of nowhere and they are presumed to be entering and leaving another dimension. The ancients speak of the Gods descending to earth, and they're deduced to be spacemen from another galaxy seeding life on earth and helping evolution along. Archaeologists see the pyramids and decide they were

built by 200,000 slaves to exacting standards we can't match today, just to bury a king. People read about world flood legends, look at Mount Everest, say "Impossible", and decide the legends speak of local floods.

Anthropologists see writing start about 5000 years ago and deduce this is evidence of the greatest advancement in the history of mankind. These deductions are all incorrect. Find out what these and other curious tidbits really mean, and how they'll change your world view forever. Ever wondered where the Noah floodwater went? Find out where it came from and finally...where it

went! Radioactive Carbon 14 in our atmosphere isn't at equilibrium: it forms at a faster rate than it breaks down. Why? And why is that crucial in figuring out the age of the earth? Ever wondered what caused different races? How about Dinosaurs? Find out what killed them... recently, and be prepared for a shock, because they aren't all dead! One of the plagues of Egypt was the river of blood, but this happened in more places than just Egypt. Find out the cause. This book solves the Bermuda Triangle disappearances, invisibility, the Tower of Babel, frozen wooly mammoths,

erratics, massive fossil sites all around the globe, destruction of Mu, and Atlantis. We also figure out the origin, of reincarnation, the underworld, the continents, the seven heavens, pole shifts, the Sumerians, and not just the origin of the gods, we find out who they are! How can one book solve so much? Read: Earth, Man & Devolution. I've created a new cover for my book and added 1/3 more material as well as fully illustrated the book. If you have an older edition feel free to contact me for the 3rd edition updates with new cover and all the illustrations for free. (I'm also the artist for my

book)I'm on
facebook in Victoria
BC under Rick
Pilote Some of the
books and authors
that helped with
some key
information were
Charles Hapgood;
Maps of the Ancient
Sea Kings,
Immanuel
Velikovsky, Earth in
Upheaval, Wallace
Budge (Book of the
dead), The Hollow
Earth by Raymond
Bernard and many
more. You can also

published to date)
Park takes readers
on an incredible
journey that
illuminates the
multitude of
elaborate

"contraptions" by
which humans in
the Western world
have imagined the
earth they inhabit--
and what lies
beyond. The stories
of Unaccustomed
Earth focus on
second-generation
immigrants making
and remaking lives,
loves and identities
in England and
America. We follow
brothers and
sisters, mothers
and fathers, friends
and lovers, in
stories that take us
from Boston and
London to Bombay
and Calcutta.
Blending the
individual and the
generational, the
exotic and the
strikingly mundane,
these haunting,
exquisitely detailed
and emotionally
complex stories are
intensely
compelling elegies

of life, death, love
and fate. This is a
dazzling work from
a masterful writer.
Barbados 1652. In
the aftermath of the
English Civil War,
the vanquished are
uprooted and
scattered to the
ends of the earth.
When marauding
English soldiers
descend on Mairead
O'Connell's family
farm, she is sold
into indentured
servitude. After
surviving a
harrowing voyage,
the young Irish
woman is auctioned
off to a Barbados
sugar plantation
where she is thrust
into a hostile world
of depravation and
heartbreak. Though
stripped of her
freedom, Mairead
refuses to
surrender her
dignity. Scottish
prisoner of war Iain

Johnstone has descended into hell. Under a blazing sun thousands of miles from home, he endures forced indentured labour in the unforgiving cane fields. As Iain plots his escape to save his men, his loyalties are tested by his yearning for Mairead and his desire to protect her. With their future stolen, Mairead and Iain discover passion and freedom in each other's arms. Until one fateful night, a dramatic chain of events turns them into fugitives. Severed Knot, the second instalment of the standalone series, Quest for the Three Kingdoms, is a B.R.A.G Medallion Honoree and a finalist for the 2019

Chaucer Award. "A truly unforgettable gem of a historic novel" - InD'tale Magazine (Crowned Heart) The Grand Contraption tells the story of humanity's attempts through 4,000 years of written history to make sense of the world in its cosmic totality, to understand its physical nature, and to know its real and imagined inhabitants. No other book has provided as coherent, compelling, and learned a narrative on this subject of subjects. David Park takes us on an incredible journey that illuminates the multitude of elaborate "contraptions" by which humans in

the Western world have imagined the earth they inhabit-- and what lies beyond. Intertwining history, religion, philosophy, literature, and the physical sciences, this eminently readable book is, ultimately, about the "grand contraption" we've constructed through the ages in an effort to understand and identify with the universe. According to Park, people long ago conceived of our world as a great rock slab inhabited by gods, devils, and people and crowned by stars. Thinkers imagined ether to fill the empty space, and in the comforting certainty of celestial movement

they discerned numbers, and in numbers, order. Separate sections of the book tell the fascinating stories of measuring and mapping the Earth and Heavens, and later, the scientific exploration of the universe. The journey reveals many common threads stretching from ancient Mesopotamians and Greeks to peoples of today. For example, humans have tended to imagine Earth and Sky as living creatures. Not true, say science-savvy moderns. But truth isn't always the point. The point, says Park, is that Earth is indeed the fragile bubble we surmise, and we must treat it with the reverence it

deserves. He's spoken of only in whispers. His origins are a mystery. Some say that he's descended from the last of the angels. Others say much worse. By all appearances, Rol Cortishane is just another ruthless pirate roaming the lawless seas, raiding warships and slavers. But the truth is something far more complicated and dangerous than anyone can imagine, including Rol. Even as he seeks to escape his birthright, Rol is slowly discovering who—and what—he really is. But the revelation won't come without exacting a terrible price from Rol and all he loves. Now a treacherous figure

from his past has made him a proposition it would be fatal to turn down. Racing against time, Rol must chart a harrowing course across the sea, back to the beautiful Rowen and the people she would rule as Queen. With his steadfast crew—the battle-scarred Creed, the mirthful halftroll Gallico, and a young escaped slave named Giffon—Rol will plunge headlong into a destiny as dark as they come. And toward a terrifying battle against an enemy as determined to destroy the world as Rol is to save it. In an alien-invaded post-apocalyptic world, the children forge deeper into

the most dangerous lands in search of The Severed Tower, an infamous location in the middle of the world's most dangerous landscape: The Strange Lands, a place where the laws of physics have completely broken down. But the closer they get to the Tower, the more precarious things become. In the twenty-second century, biomedical nanotechnology has given everyone in the world long life and robust health. It is the New Utopia, and all live in the expectation that true immortality will soon be realized. Damon Hart, son of the scientist responsible for much of the

wonders of the new world, would rather forget his famous father and get on with his own life. But a shadowy terrorist group forces Damon to confront his heritage, launching a cat-and-mouse game that pits Damon against the terrorists, Interpol, and the powerful corporations that control the biotechnology of the future...a game Damon is ill-equipped to survive. At the Publisher's request, this title is being sold without Digital Rights Management Software (DRM) applied. Supporting Lovelock's thesis that the Earth is a living being, Swan suggests natural sites such as Serpent Mound,

Machu Pichu, and Kilauea Center have the power to move us in ways modern science cannot explain.
