Advanced Calculus (Revised Edition) Lynn Harold Loomis, Shlomo Zvi Sternberg, 2014-02-26 An authorised reissue of the long out of print classic textbook *Advanced Calculus* by the late Dr Lynn Loomis and Dr Shlomo Sternberg both of Harvard University has been a revered but hard to find textbook for the advanced calculus course for decades. This book is based on an honors course in advanced calculus that the authors gave in the 1960s. The foundational material presented in the unstarred sections of Chapters 1 through 11 was normally covered but different applications of this basic material were stressed from year to year and the book therefore contains more material than was covered in any one year. It can accordingly be used with omissions as a text for a year's course in advanced calculus or as a text for a three semester introduction to analysis. The prerequisites are a good grounding in the calculus of one variable from a mathematically rigorous point of view together with some acquaintance with linear algebra. The reader should be familiar with limit and continuity type arguments and have a certain amount of mathematical sophistication. As possible introductory texts we mention *Differential and Integral Calculus* by R Courant, *Calculus* by T Apostol, *Calculus* by M Spivak and *Pure Mathematics* by G Hardy. The reader should also have some experience with partial derivatives. In overall plan the book divides roughly into a first half which develops the calculus principally the differential calculus in the setting of normed vector spaces and a second half which deals with the calculus of differentiable manifolds.

Essential Mathematics for Economics and Business Teresa Bradley, 2013-05-06 *Essential Mathematics for Economics and Business* is established as one of the leading introductory textbooks on mathematics for students of business and economics. Combining a user friendly approach to mathematics with practical applications to the subjects, the text provides students with a clear and comprehensible guide to mathematics. The fundamental mathematical concepts are explained in a simple and accessible style using a wide selection of worked examples, progress exercises and real world applications. New to this Edition: Fully updated text with revised worked examples and updated material on Excel and Powerpoint. New exercises in mathematics and its applications to give further clarity and practice opportunities. Fully updated online material including animations and a new test bank. The fourth edition is supported by a companion website at www.wiley.com/college/bradley which contains Animations of selected worked examples providing students with a new way of understanding the problems. Access to the Maple T A test bank which features over 500 algorithmic questions. Further learning material applications exercises and solutions. Problems in context studies which present the mathematics in a business or economics framework. Updated PowerPoint slides, Excel problems and solutions. The text is aimed at providing an introductory level exposition of mathematical methods for economics and business students. In terms of level, pace, complexity of examples and user friendly style, the text is excellent. It genuinely recognises and meets the needs of students with minimal maths background. Colin Glass, Emeritus Professor, University of Ulster. One of the major strengths of this book is the range of exercises in both drill and applications. Also the worked examples are excellent; they provide examples of the use of mathematics to realistic problems and are easy to follow. Donal Hurley, formerly of University College Cork. The most comprehensive reader in this topic yet; this book is an essential aid to the avid economist who loathes mathematics. Amazon.co.uk
