possible for us to learn and become At a time when we are constantly being asked to retrain and reinvent ourselves to adapt to new technologies and changing industries this book shows us how we can uncover and develop talents we didn't realize we had no matter what our age or background We're often told to follow our passions But in *Mindshift* Dr Barbara Oakley shows us how we can broaden our passions Drawing on the latest neuroscientific insights Dr Oakley shepherds us past simplistic ideas of aptitude and ability which provide only a snapshot of who we are now with little consideration about how we can change Even seemingly bad traits such as a poor memory come with hidden advantages like increased creativity Profiling people from around the world who have overcome learning limitations of all kinds Dr Oakley shows us how we can turn perceived weaknesses such as impostor syndrome and advancing age into strengths People may feel like they're at a disadvantage if they pursue a new field later in life yet those who change careers can be fertile cross-pollinators They bring valuable insights from one discipline to another Dr Oakley teaches us strategies for learning that are backed by neuroscience so that we can realize the joy and benefits of a learning lifestyle *Mindshift* takes us deep inside the world of how people change and grow Our biggest stumbling blocks can be our own preconceptions but with the right mental insights we can tap into hidden potential and create new opportunities

Pekka Abrahamsson, Richard Baskerville, Kieran Conboy, Brian Fitzgerald, Lorraine Morgan, Xiaofeng Wang, 2008-06-10 The XP conference series established in 2000 was the first conference dedicated to agile processes in software engineering The idea of the conference is to offer a unique setting for advancing the state of the art in the research and practice of agile processes This year's conference was the ninth consecutive edition of this international event The conference has grown to be the largest conference on agile software development outside North America The XP conference enjoys being one of those conferences that truly brings practitioners and academics together About 70% of XP participants come from industry and the number of academics has grown steadily over the years XP is more of an experience rather than a regular conference It offers several different ways to interact and strives to create a truly collaborative environment where new ideas and exciting findings can be presented and shared For example this year's open space session which was a conference within a conference was larger than ever before Agile software development is a unique phenomenon from several perspectives

Agility Across Time and Space Darja Šmite, Nils Brede Moe, Pär J. Ågerfalk, 2010-05-17 Rather than deciding whether or not to get involved in global sourcing many companies are facing decisions about whether or not to apply agile methods in their distributed projects These companies are often motivated by the opportunities to solve the coordination and communication difficulties associated with global software development Yet while agile principles prescribe close interaction and co-location the very nature of distributed software development does not support these prerequisites Moe and Ågerfalk structured the book into five parts In Motivation the editors introduce the fundamentals of agile distributed software development and explain the rationale behind the application of agile practices in globally distributed software projects

Transition describes implementation strategies adoption of particular agile practices for distributed projects and general concepts of agility Management details practical implications for project planning time management and customer and subcontractor interaction Teams discusses agile distributed team configuration effective communication and knowledge transfer and allocation of roles and responsibilities Finally in the Epilogue the editors summarize all contributions and present future trends for research and practice in agile distributed development This book is primarily targeted at researchers lecturers and students in empirical software engineering and at practitioners involved in globally distributed software projects The contributions are based on sound empirical research and identify gaps and commonalities in both the existing state of the art and state of the practice In addition they also offer practical advice through many hints checklists and experience reports Questions answered in this book include What should companies expect from merging agile and distributed strategies What are the stumbling blocks that prevent companies from realizing the benefits of the agile approach in distributed environments and how can we recognize infeasible strategies and unfavorable circumstances What helps managers cope with the challenges of implementing agile approaches in distributed software development projects How can distributed teams survive the decisions taken by management and become efficient through the application of agile approaches
