Lake Pavin T elesphore Sime-Ngando, Pierre Boivin, Emmanuel Chapron, Didier Jezequel, Michel Meybeck, 2016-10-31 This book represents the first multidisciplinary scientific work on a deep volcanic maar lake in comparison with other similar temperate lakes The syntheses of the main characteristics of Lake Pavin are for the first time set in a firmer footing comparative approach encompassing regional national European and international aquatic science contexts It is a unique lake because of its permanently anoxic monimolimnion and furthermore because of its small surface area its substantially low human influence and by the fact that it does not have a river inflow The book reflects the scientific research done on the general limnology history origin volcanology and geological environment as well as on the geochemistry and biogeochemical cycles Other chapters focus on the biology and microbial ecology whereas the sedimentology and paleolimnology are also given attention This volume will be of special interest to researchers and advanced students primarily in the fields of limnology biogeochemistry and aquatic ecology

Instrumentation in Earthquake Seismology Jens Havskov, Gerardo Alguacil, 2010-02-11 Here is unique and comprehensive coverage of modern seismic instrumentation based on the authors practical experience of a quarter century in seismology and geophysics Their goal is to provide not only detailed information on the basics of seismic instruments but also to survey equipment on the market blending this with only the amount of theory needed to understand the basic principles Seismologists and technicians working with seismological instruments will find here the answers to their practical problems Instrumentation in Earthquake Seismology is written to be understandable to the broad range of professionals working with seismological instruments and seismic data whether students engineers or seismologists Whether installing seismic stations networks and arrays working and calibrating stationary or portable instruments dealing with response information or teaching about seismic instruments professionals and academics now have a practical and authoritative sourcebook Includes SEISAN and SEISLOG software systems that are available from <http://extras.springer.com> and <http://www.geo.uib.no/seismo/software/software.html>

Reservoir Sedimentation G.W. Annandale, 1987-01-01 Research on reservoir sedimentation in recent years has been aimed mainly at water resources projects in developing countries These countries especially in Africa often have to cope with long droughts flash floods and severe erosion problems Large reservoir capacities are required to capture water provided by flash floods so as to ensure the supply of water in periods of drought The problem arising however is that these floods due to their tremendous stream power carry enormous volumes of sediment which due to the size of reservoirs are virtually deposited in toto in the reservoir basin leading to fast deterioration of a costly investment Accurate forecasting of reservoir behaviour is therefore of the utmost importance This book fills a gap in current literature by providing in one volume comprehensive coverage of techniques required to practically investigate the effects sediment deposition in reservoirs has on the viability of water resources

projects Current techniques for practically estimating sediment yield from catchments estimating the volume of sediment expected to deposit in reservoirs predicting sediment distribution and calculating scour downstream of reservoirs are evaluated and presented The liberal use of diagrams and graphs to explain the various techniques enhances understanding and makes practical application simple A major feature of the book is the application of stream power theory to explain the process of reservoir sedimentation and to develop four new methods for predicting sediment distribution in reservoirs The book is primarily directed at practising engineers involved in the planning and design of water resources projects and at post graduate students interested in this field of study

Alluvial Fans Adrian M. Harvey, Anne E. Mather, Martin R. Stokes, 2005 Alluvial fans are important sedimentary environments They trap sediment delivered from mountain source areas and exert an important control on the delivery of sediment to downstream environments to axial drainages and to sedimentary basins They preserve a sensitive record of environmental change within the mountain source areas Alluvial fan geomorphology and sedimentology reflect not only drainage basin size and geology but change in response to tectonic climatic and base level controls One of the challenges facing alluvial fan research is to resolve how these gross controls are reflected in alluvial fan dynamics and to apply the results of studies of modern fan processes and Quaternary fans to the understanding of sedimentary sequences in the rock record This volume includes papers based on up to date research and focuses on three themes alluvial fan processes dynamics of Quaternary alluvial fans and fan sedimentary sequences Linking the papers is an emphasis on the controls of fan geomorphology sedimentology and dynamics This provides a basis for integration between geomorphological and sedimentological approaches and an understanding how fluvial systems respond to tectonic climatic and base level changes

Small Businesses Trickling Up in Central and Eastern Europe Galen

Spencer Hull,2013-01-11 First published in 1999 Small businesses now constitute the most dynamic element of growth in the emerging markets of the Central and Eastern European region This book argues that the small and medium sized enterprise SME sector has contributed more to the growth of these countries in transition than have privatized state enterprises and the public sector In 1989 most of the countries of Eastern and Central Europe were still under an economic system dominated by state owned enterprises Since then a process of liberalization has been unleashed to promote free market policies This has involved programs of privatization and restructuring of public enterprises as well as the promotion of policies to enable a private sector to develop Small businesses are creating thousands of new jobs while large companies are retrenching and downsizing their work force In some countries of the region this process is much further along than in others However the SME sector has developed at a more rapid pace than has the privatization of the large public companies There has been a flurry of new enterprises springing up throughout the region which are trickling up in a frequently hostile environment against tremendous odds and yet managing to have a pronounced impact on their respective economies Small businesses have taken over in sectors that used to be dominated by big enterprises primarily in services and consumer products They have provided a crucial outlet for pent up entrepreneurial talent that had remained dormant during the long period of state domination This work urges legislators policy makers and development agencies alike to take account of the importance of the SME s in their legislation and planning Given a more favorable environment these small businesses will provide even greater impetus for economic growth Equally important is for entrepreneurs themselves to be convinced of the rightness of their path in societies that have traditionally looked down upon profit seekers as unscrupulous and selfish If the CEE region is to achieve its full potential of economic growth policies and support mechanisms to promote the SME sector will be needed to assure a favorable environment
