The Aesthetics of Emotion Mar 12 2024 Gerald C. Cupchik builds a bridge between science and the humanities, arguing that interactions between mind and body in everyday life are analogous to relations between subject matter and style in art. According to emotional phase theory, emotional reactions emerge in a 'perfect storm' whereby meaningful situations evoke bodily memories that unconsciously shape and unify the experience. Similarly, in expressionist or impressionist painting, an evocative visual style can spontaneously colour the experience and interpretation of subject matter. Three basic situational themes encompass complementary pairs of primary emotions: attachment (happiness - sadness), assertion (fear - anger), and absorption (interest - disgust). Action episodes, in which a person adapts to challenges or seeks to realize goals, benefit from energizing bodily responses which focus attention on the situation while providing feedback, in the form of pleasure or pain, regarding success or failure. In high representational paintings, style is transparent, making it easier to fluently identify subject matter.

Dental Management of Obstructive Sleep Apnea (OSA) Jul 12 2021 Obstructive sleep apnea syndrome (OSAS) is a very common disorder, affecting a large percentage of the population. Often undiagnosed, it increases the risk of heart attack, stroke, arterial hypertension, diabetes, and other chronic medical conditions. Dentists with expertise in sleep medicine can easily identify signs and symptoms of OSA, facilitate referral, and provide effective treatments in collaboration with medical providers. This text aims to provide an overview of relevant topics to dentists who want to include sleep medicine in their clinical practice. The first part of the

book is dedicated to the description and diagnosis of sleep-disordered breathing. The second part discusses different therapeutic options for treating sleep-disordered breathing. The site of airway obstruction, BMI, craniofacial anatomy, and sleep position of the patient provide crucial data, informing the most suitable therapeutic options and the conditions under which they can be employed. The last chapter describes cases that illustrate the clinical approach adopted to select patients with OSAS from the first medical consultation to follow-up. Here the authors showcase the different steps in a multidisciplinary approach for the management of patients affected by OSAS. Biology and Management of Problematic Crop Weed Species Apr 20 2022 Weeds are the main biological constraint to crop production throughout the year. Uncontrolled weeds could cause 100% yield loss. In Australia, the overall cost of weeds to Australian grain growers was estimated at AU\$ 3.3 billion annually. In terms of yield losses, weeds amounted to 2.7 million tonnes of grains at a national level. In the USA, weeds cost US\$ 33 billion in lost crop production annually. In India, these costs were estimated to be much higher (US\$ 11 billion). These studies from different economies suggest that weeds cause substantial yield and economic loss. **Biology and Management of Problematic Weed Species** details the biology of key weed species, providing vital information on seed germination and production, as well as factors affecting weed growth. These species include *Chenopodium album*, *Chloris truncata* and *C. virgate*, *Conyza bonariensis* and *C. canadensis*, *Cyperus rotundus*, and many more. This information is crucial for researchers and growers to develop integrated weed management (IWM) strategies. Written by leading experts across the globe, this book is an essential read to plant biologists and ecologists, crop scientists, and students and researchers interested in weed science.
