This volume offers both theoretical and research-based accounts from mothers in academia who must balance their own intricate knowledge of school systems, curriculum and pedagogy with their children's education and school lives. It explores the contextual advantages and disadvantages of "knowing too much" and how this impacts children's actions, scholastics and developing consciousness along various lines. Additionally, it allows teachers, administrators and researchers to critically examine their own discourses and those of their students to better navigate their professional and domestic roles. Gathering narratives from academic women in traditional and nontraditional maternal roles, this volume presents both contemporary and retrospective experiences of what it's like to raise children amidst educational and sociocultural change.

Dr. Loren Cordain's bestselling *The Paleo Diet* and *The Paleo Diet Cookbook* have helped hundreds of thousands of people eat for better health and weight loss by following the diet humans were genetically designed to eat: meats, fish, fresh fruits, vegetables, nuts and other foods that mimic the diet of our Paleolithic ancestors. The Apostle Paul was the greatest early missionary of the Christian gospel. He was also, by his own admission, an Israelite. How can both these realities coexist in one individual? This book argues that Paul viewed his mission to the Gentiles, in and of itself, as the primary expression of his

Jewish identity. The concept of Israel's divine vocation is used to shed fresh light on a number of much-debated passages in Paul's letter to the Romans. Learn the secrets of successful schools Citing wisdom from top educational experts and building on what is already working, award-winning author Alan M. Blankstein offers tools for finding excellence in schools, scaling these practices across learning communities, and transforming low-performing schools into high-performing schools. His five-step process includes: Identifying and assessing excellence Creating an action plan Assigning resources such as time, materials, etc. Transferring excellence in the form of knowledge and skills throughout the school and

district Sustaining the excellence Also included are effective strategies for sustaining student gains, closing gaps within and between schools, building leader capacity, and increasing community commitment. Recent years witnessed an increased interest in formal pragmatics and especially the establishment of game theory as a new research methodology for the study of language use. Game and Decision Theory (GDT) are natural candidates if we look for a theoretical foundation of linguistic pragmatics. Over the last decade, a firm research community has emerged with a strong interdisciplinary character, where economists, philosophers, and social scientists meet with linguists. Within this field of research, three major currents can be distinguished: one is closely related to the Gricean paradigm and aims at a precise foundation of pragmatic reasoning, the second originates in the economic literature and is concerned

with the role of game theory in the context of language use, and the third aims at language evolution seen either from a biological or from a cultural perspective. Edited in collaboration with FoLLI, the Association of Logic, Language and Information, this volume is based on a selection of papers of two international conferences, one organised at ESSLLI in 2007 on language, games, and evolution, and the other organised at the ZAS in Berlin on games and decisions in pragmatics in 2008. This volume is rounded off by additional invited papers and now contains eight articles of leading researchers in the field which together provide a state-of-the-art survey of current research on language evolution and game theoretic approaches to pragmatics. This book presents the newest and actual results of researches that intend to improve theoretical and practical activities in the field of mechanical engineering and automotive, clinical biomechanics, civil engineering, robotics and

mechatronics based on the papers presented at the 5th International Conference of Mechanical Engineering (ICOME 2019, October 24-25, 2019, Craiova, Romania). This conference proceedings focuses on enabling science and mathematics practitioners and citizens to respond to the pressing challenges of global competitiveness and sustainable development by transforming research and teaching of science and mathematics. The proceedings consist of 82 papers presented at the Science and Mathematics International Conference (SMIC) 2018, organised by the Faculty of Mathematics and Natural Sciences, Universitas Negeri Jakarta, Indonesia. The proceedings are organised in four parts: Science, Science Education, Mathematics, and Mathematics Education. The papers contribute to our understanding of important contemporary issues in science, especially nanotechnology, materials and environmental science; science

education, in particular, environmental sustainability, STEM and STEAM education, 21st century skills, technology education, and green chemistry; and mathematics and its application in statistics, computer science, and mathematics education. Though decades ago school shootings were rare events, today they are becoming normalized. Active shooter drills have become more commonplace as pressure is placed on schools and law enforcement to prevent the next attack. Yet others argue the traumatizing effects of such exercises on the students. Additionally, violence between students continues to remain problematic as bullying pervades children's lives both at school and at home, leading to negative mental health impacts and, in extreme cases, suicide. Establishing safer school policies, promoting violence prevention programs, building healthier classroom environments, and providing

better staff training are all vital for protecting students physically and mentally. The Research Anthology on School Shootings, Peer Victimization, and Solutions for Building Safer Educational Institutions examines the current sources of violence within educational systems, and it offers solutions on how to provide a safer space for both students and educators alike. Broken into four sections, the book examines the causes and impacts that peer victimization has on students and how this can lead to further violence and investigates strategies for detecting the warning signs. The book provides solutions that range from policies and programs that can be established to strategies for teaching nonviolence and promoting coexistence in the classroom. Highlighting a range of topics such as violence prevention, school climate, and bullying, this publication is an ideal reference source for school administrators, law enforcement, teachers,

government and state officials, school boards, academicians, researchers, and upper-level students who are intent on stopping the persisting and unfortunate problem that is school violence. In the later stages of gestation, fetal functions undergo increasing change and development, preparing the fetus for the transition to its postnatal environment. Rapid maturation is witnessed in breathing, swallowing, sensory

functions, sleep, and many other processes, with corresponding behavioral changes. By 35 to 40 weeks of gestation, fetuses are capable of living ex utero without support, but it is increasingly appreciated that even infants born at between 35 and 36 weeks can suffer long-term consequences. This book, which complements the author's previous volume on development of normal fetal movements during the first 25 weeks of gestation, discusses in detail the full range of behavioral phenomena observed during the final 15 weeks of gestation, with careful analysis of their mutual relationships. A key feature is the outstanding photographic material, difficult to obtain at this late stage, and the instructive graphs that are also included. The information provided will alert clinicians to deviations from the norm and to physiologic phenomena that can turn pathologic in infants born prematurely. SGN.
