

HOW TO READ A SAFETY DATA SHEET

OSHA Brief:

Requires that the chemical manufacturer, distributor, or importer provide Safety Data Sheets (SDS) for hazardous chemicals or materials. The information contained in the SDS is largely the same as the MSDS, except that the information is presented in a prescribed order (Section 14). This order provides guidance to help workers who handle hazardous chemicals to become familiar with the format and understand the contents of the SDS.

The SDS must information provided in the product or container label, the physical, health, and environmental health hazards, protective measures, and safety precautions for handling, storing, and transporting the chemical. This information contained in the SDS is consistent with the information contained in the MSDS. OSHA's 29 CFR 1910.1200 requires that SDSs prepared provide specific information as detailed in Appendix D of 29 CFR 1910.1200. The SDSs prepared may also include additional information as required by other agencies.

Sections 1 through 8 contain general information about the chemical, identification, hazards, composition, safe handling practices, and emergency control measures (e.g., spill and leak) and information on the product or container label. Sections 9 through 13 and 15 contain other technical and scientific information such as physical and chemical properties, stability and reactivity information, toxicological information, and ecological information. Sections 14 and 15 including the date of preparation or last revision. The SDSs must also state that not applicable information was found where the preparer does not find relevant information for any particular reason.

The SDS must also contain Sections 12 through 15, to be consistent with the LHA (Labels, Packaging, and System of Classification and Labeling of Chemicals (LSCS), for OSHA and the content of these sections. Sections 14 and 15 are consistent with a description of all 28 sections of the SDS, along with their contents, is presented.

Section 1: Identification

This section identifies the chemical on the SDS as well as the recommended uses. It also provides the recommended container contents of:

- Product identifier used on the label and any other names or synonyms by which the substance is known.
- Name, address, phone number of the manufacturer, distributor, or other responsible party, and emergency phone number.
- Recommended use of the chemical (e.g., a fertilizer) and any restrictions on use (e.g., do not spray directly) and any use restrictions (e.g., do not spray directly).

Section 2: Hazard(s) Identification

This section identifies the hazard(s) of the chemical and appropriate warning labels that must be used with the chemical. The hazard and appropriate warning labels are:

- The hazard classification of the chemical (e.g., flammable liquid, category 2).

- Pictograms or hazard symbols may be presented as graphical representations of the symbols in black and white or as a description of the name of the symbol (e.g., skull and crossbones, flame).
- Precautionary statements.
- Description of any hazards not otherwise classified.
- For a mixture that contains an ingredient with a known toxicity, a statement that the chemical is classified as a hazard if the ingredient is present at a concentration above a certain level (e.g., 1% for acute toxicity, 0.1% for chronic toxicity). If this is a total part or part of the mixture and not just for the individual ingredients.

Section 3: Ingredients Information

This section identifies the chemical composition of the chemical on the SDS, including impurities and stabilizing additives. This section includes information on substances, mixtures, and all chemicals where a trade secret is claimed. Required information is as follows:

 - The concentration (weight percent) of each ingredient must be specified except in a concentration ranges may be used in the following situations:
 - When the concentration is not known.
 - When the SDS is used for a group of substantially similar mixtures.
 - A statement that the specific chemical identity and/or exact percentage (concentration) of composition has been withheld as a trade secret is required.

Section 6: Accidental Release Measures

This section provides recommendations for the appropriate response to spills, leaks, or releases that occur in the workplace. This information includes:

- Recommendations for containment and cleanup procedures to prevent or minimize exposure to people, properties, or the environment. It may also include recommendations (distinguishing between responses for large and small spills) about the right order of priorities for the response. This information may include:
- Use of personal precautions (such as removal of ignition sources or providing adequate ventilation) and/or protective measures (such as eye protection, gloves, and clothing).
- Emergency procedures, including instructions for a spill or leak response.
- Methods used to contain or clean up (e.g., covering the spill and capping or encasing).
- Cleaning procedures (e.g., appropriate techniques for decontamination).
- Decontamination, cleaning or decontaminating sufficient equipment, and/or equipment required for the spill.

Section 7: Handling and Storage

This section provides guidance on the safe handling practices and safe storage of chemicals. The required information consists of:

- Methods for handling the chemical to minimize the risk of exposure to people, properties, or the environment, including information on personal protective equipment (PPE) and other protective measures that can be used to reduce exposure to people, properties, or the environment.
- Recommendations on the conditions for safe storage, including any incompatibilities.
- Provision of information on specific storage (e.g., temperature).

Section 8: Exposure Controls/Personal Protection

This section provides information on the appropriate response to spills, leaks, or releases that occur in the workplace. This information includes:

- Occupational Safety and Health (OSHA) Permissible Exposure Limits (PELs), American Conference of Governmental Industrial Hygienists (ACGIH) Threshold Limit Values (TLVs), and any other exposure limit used or recommended by the chemical manufacturer, importer, or distributor, including the units used (e.g., mg/m³, ppm, or %).
- Appropriate engineering controls (e.g., local exhaust ventilation, or use only in an enclosed system).
- Methods used to contain or clean up (e.g., covering the spill and capping or encasing).
- Appropriate types of eye, face, skin, or respiratory protection (PPE) (e.g., appropriate types of eye, face, skin, or respiratory protection).
- Any other personal protective equipment (PPE) (e.g., gloves, or other types of PPE) that may be required to prevent or minimize exposure to people, properties, or the environment.
