of dull networking books you'd otherwise have to buy and house. *Networking All in One For Dummies* covers all the basic and not so basic information you need to get a network up and running. It also helps you keep it running as it grows more complicated, develops bugs, and encounters all the fun sorts of trouble you expect from a complex system. Ideal both as a starter for newbie administrators and as a handy quick reference for pros, this book is built for speed, allowing you to get past all the basics like installing and configuring hardware and software, planning your network design, and managing cloud services so you can get on with what your network is actually intended to do. In a friendly, jargon-free style, Doug Lowe, an experienced IT Director and prolific tech author, covers the essential up-to-date information for networking in systems such as Linux and Windows 10 and clues you in on best practices for security, mobile, and more. Each of the nine minibooks demystifies the basics of one key area of network management: Plan and administrate your network, Implement virtualization, Get your head around networking in the Cloud, Lock down your security protocols. The best thing about this book: You don't have to read it all at once to get things done. Once you've solved the specific issue at hand, you can put it down again and get on with your life. And the next time you need it, it'll have you covered.

Interpretable Machine Learning Christoph Molnar, 2020. This book is about making machine learning models and their decisions interpretable. After exploring the concepts of interpretability, you will learn about simple interpretable models such as decision trees, decision rules, and linear regression. Later chapters focus on general model-agnostic methods for interpreting black box models like feature importance and accumulated local effects, and explaining individual predictions with Shapley values and LIME. All interpretation methods are explained in depth and discussed critically. How do they work under the hood? What are their strengths and weaknesses? How can their outputs be interpreted? This book will enable you to select and correctly apply the interpretation method that is most suitable for your machine learning project.

Good Economics for Hard Times Abhijit V. Banerjee, Esther Duflo, 2019-11-12. The winners of the Nobel Prize show how economics, when done right, can help us solve the thorniest social and political problems of our day. Figuring out how to deal with today's critical economic problems is perhaps the great challenge of our time. Much greater than space travel or perhaps even the next revolutionary medical breakthrough, what is at stake is the whole idea of the good life as we have known it. Immigration and inequality, globalization and technological disruption, slowing growth and accelerating climate change: these are sources of great anxiety across the world, from New Delhi and Dakar to Paris and Washington DC. The resources to address these challenges are there; what we lack are ideas that will help us jump the wall of disagreement and distrust that divides us. If we succeed, history will remember our era with gratitude; if we fail, the potential losses are incalculable. In this revolutionary book, renowned MIT economists Abhijit V. Banerjee and Esther Duflo take on this challenge, building on cutting-edge research in economics, explained with lucidity and grace. Original, provocative, and urgent, *Good Economics for Hard Times* makes a persuasive case for an intelligent
