The Diversification and Fragmentation of International Criminal Law Feb 14 2022 This volume is the first in a new series of Studies on the Frontiers of International Law. The term 'frontier' is traditionally associated with proximity to a boundary or a demarcation line. But it is also a connecting point, i.e., a passage or channel between spaces that are usually considered as separate entities. The Series aims to explore the visible and imaginary boundaries of scholarship in International Law. It is designed to test the existing table of contents, vocabulary and limits of 'Public International Law', to investigate lines and linkages between 'centre' and 'periphery', and to re-map or re-think some of its conceptual boundaries. The current volume is written in this spirit. It deals with the tension between unity and diversification which has gained a central place in the debate under the label of 'fragmentation'. It explores the meaning, articulation and risks of this phenomenon in a specific area: International Criminal Justice. It brings together established and fresh voices who analyse different sites and contestations of this concept, as well as its context and specific manifestations in the interpretation and application of International Criminal Law. The volume thereby connects discourse on 'fragmentation' with broader inquiry on the merits and discontents of legal pluralism in 'Public International Law'.

***The Polygraph and Lie Detection* Apr 11 2024 The polygraph, often portrayed as a magic mind-reading machine, is still controversial among experts, who continue heated debates about its validity as a lie-detecting device. As the nation takes a fresh look at ways to enhance its security, can the polygraph be considered a useful tool? The Polygraph and Lie Detection puts the polygraph itself to the test, reviewing and analyzing data about its use in criminal investigation, employment screening, and counter-intelligence. The book looks at: The theory of how the polygraph works and evidence about how deceptiveness and other psychological conditions affect the physiological responses that the polygraph measures. Empirical evidence on the performance of the polygraph and the success of subjects' countermeasures. The actual use of the polygraph in the arena of national security, including its role in deterring threats to security. The book addresses the difficulties of measuring polygraph accuracy, the usefulness of the technique for aiding interrogation and for deterrence, and includes potential alternatives such as voice-stress analysis and brain measurement techniques.**

The unconscious zone Oct 13 2021 Much of our everyday environment affects us subconsciously and recent research showing how the brain processes information. The difference

between the large amount of sensory input that the brain receives and what little our minds perceive is huge. This book deals with various aspects of "The Unconscious Zone", which gives an unconscious influence of experiences and non-conscious decision that is often called intuition. In the movie "In the Mind of John Malkovich" pressed the main character on the elevator button 7 1/2 and ended up in a completely different world, where he through a hidden door could see into and check John Malkovich's brain. Recent research has shown that magnetic resonance (fMRI) can map the brain's internal functions and create a library that can be interpreted and the person's thoughts can be followed. Using Transcranial Magnetic stimulation (TMS), one with a magnetic field can control the behavior of the different centers of the brain and also get a hand to perform movements or blocking mental functions. A companion piece to this is a journey into the "The Unconscious Zone" as the book conveys.

Encyclopedia of the Mind Aug 23 2022 It's hard to conceive of a topic of more broad and personal interest than the study of the mind. In addition to its traditional investigation by the disciplines of psychology, psychiatry, and neuroscience, the mind has also been a focus of study in the fields of philosophy, economics, anthropology, linguistics, computer science, molecular biology, education, and literature. In all these approaches, there is an almost universal fascination with how the mind works and how it affects our lives and our behavior. Studies of the mind and brain have crossed many exciting thresholds in recent years, and the study of mind now represents a thoroughly cross-disciplinary effort. Researchers from a wide range of disciplines seek answers to such questions as: What is mind? How does it operate? What is consciousness? This encyclopedia brings together scholars from the entire range of mind-related academic disciplines from across the arts and humanities, social sciences, life sciences, and computer science and engineering to explore the multidimensional nature of the human mind.

Questions and Information Systems Apr 30 2023 The design and functioning of an information system improve to the extent that the system can handle the questions people ask. Surprisingly, however, researchers in the cognitive, computer, and information sciences have not thoroughly examined the multitude of relationships between information systems and questions -- both question asking and answering. The purpose of this book is to explicitly examine these relationships. Chapter contributors believe that questions play a central role in the analysis, design, and use of different kinds of natural or artificial information systems such as human cognition, social interaction, communication networks, and intelligent tutoring systems. Their efforts show that data structures and representations need to be organized around the questioning mechanisms in order to achieve a quick retrieval of relevant useful information.

Nobel laureate Daniel Kahneman has described financial advising as a prescriptive activity whose main objective should be to guide investors to make decisions that serve their best interests. The reality? That's easier said than done. In the Second Edition of Behavioral Finance and Wealth Management, Michael Pompian takes a practical approach to the growing science of behavioral finance, and puts it to use for real investors. He applies knowledge of 20 of the most prominent individual investor biases into "behaviorally-modified" asset allocation decisions. Offering investors and financial advisors a "self-help" book, Pompian shows how to create investment strategies that leverage the latest cutting edge research into behavioral biases of individual investors. This book: Shows investors and financial advisors how to either moderate or adapt to behavioral biases, in order to improve investment results and identifies "the best practical allocation" for investment portfolios. Using these two sound approaches for guiding investment decision-making,
