Mike Busch on Engines Mike Busch, Mike Busch A&P/Ia,2018-05-12 The risk of engine failure is greatest when your engine is young NOT when it's old You should worry more about pediatrics than geriatrics Mike Busch A P IA *Mike Busch on Engines* expands the iconoclastic philosophy of his groundbreaking first book *Manifesto* to the design operation condition monitoring maintenance and troubleshooting of piston aircraft engines Busch begins with the history and theory of four stroke spark

ignition engines He describes the construction of both the top end cylinders and bottom end inside the case and functioning of key systems lubrication ignition carburetion fuel injection turbocharging He reviews modern engine leaning technique which your POH probably has all wrong and provides a detailed blueprint for maximizing the life of your engine The second half presents a 21st century approach to health assessment maintenance overhaul and troubleshooting Busch explains how modern condition monitoring tools like borescopy oil analysis and digital engine monitor data analysis allow you to extend engine life and overhaul strictly on condition rather than an arbitrary TBO The section devoted to troubleshooting problems like rough running high oil consumption temperamental ignition and turbocharging issues is worth its weight in gold If you want your engine to live long and prosper you need this book

Reemergence of Established Pathogens in the 21st Century I.W. Fong, Karl Drlica, 2003-06-30 In the closing decade of the last century we saw warnings that infectious diseases will require much more attention from patients and physicians in the 21st century Recently discovered diseases such as AIDS pose a major threat to the population at large and to that threat has been added the re-emergence of established pathogens microbes that were readily treatable in the past Since infectious diseases already play a major role in the burden of illness and mortality health care providers and planners are worried A large proportion of the problem is man-made arising mainly from the unnecessary overuse of antimicrobials in hospital and community settings and from the agricultural misuse of the agents in animal feed A consequence has been a dramatic increase in resistant strains of bacteria that were considered conquerable several decades ago Community infections caused by multi-resistant pneumococci serve as an example These organisms were readily treated with penicillin but now the spread of penicillin-resistant *Streptococcus pneumoniae* from continent to continent is becoming a worldwide problem This is a major concern because pneumococcal infections are common in the community being the leading cause of pneumonia sinusitis and meningitis Resistant bacteria in hospitals are also becoming more prevalent We have become accustomed to hearing about methicillin-resistant *Staphylococcus aureus* MRSA and vancomycin-resistant enterococci VRE but now we have to be concerned about multidrug-resistant coliform bacteria and pseudomonads
