improve product performance and shorten the product development cycle *Automotive Development Processes* Julian Weber, 2009-06-22 The global crisis the automotive industry has slipped into over the second half of 2008 has set a fierce spotlight not only on which cars are the right ones to bring to the market but also on how these cars are developed Be it OEMs developing new models suppliers integrating themselves deeper into the development processes of different OEMs analysts estimating economical risks and opportunities of automotive investments or even governments creating and evaluating scenarios for financial aid for suffering automotive companies At the end of the day it is absolutely indispensable to comprehensively understand the processes of automotive development the core subject of this book Let s face it More than a century after Carl Benz Wilhelm Maybach and Gottlieb Daimler developed and produced their first motor vehicles the overall concept of passenger cars has not changed much Even though components have been considerably optimized since then motor cars in the 21st century are still driven by combustion engines that transmit their propulsive power to the road s face via gearboxes transmission shafts and wheels which together with spring damper units allow driving stability and ride comfort Vehicles are still navigated by means of a steering wheel that turns the front wheels and the required control elements are still located on a dashboard in front of the driver who operates the car sitting in a seat **Crop Stress and its**

Management: Perspectives and Strategies B. Venkateswarlu, Arun K. Shanker, Chitra Shanker, M. Maheswari, 2011-11-22 Crops experience an assortment of environmental stresses which include abiotic viz drought water logging salinity extremes of temperature high variability in radiation subtle but perceptible changes in atmospheric gases and biotic viz insects birds other pests weeds pathogens viruses and other microbes The ability to tolerate or adapt and overwinter by effectively countering these stresses is a very multifaceted phenomenon In addition the inability to do so which renders the crops susceptible is again the result of various exogenous and endogenous interactions in the ecosystem Both biotic and abiotic stresses occur at various stages of plant development and frequently more than one stress concurrently affects the crop Stresses result in both universal and definite effects on plant growth and development One of the imposing tasks for the crop researchers globally is to distinguish and to diminish effects of these stress factors on the performance of crop plants especially with respect to yield and quality of harvested products This is of special significance in view of the impending climate change with complex consequences for economically profitable and ecologically and environmentally sound global agriculture The challenge at the hands of the crop scientist in such a scenario is to promote a competitive and multifunctional agriculture leading to the production of highly nourishing healthy and secure food and animal feed as well as raw materials for a wide variety of industrial applications In order to successfully meet this challenge researchers have to understand the various aspects of these stresses in view of the current development from molecules to ecosystems The book will focus on broad research areas in relation to these stresses which are in the forefront in contemporary crop stress research
